### QX39 Monthly Giving Comparison Current vs Prior 2 years Analysis

*This report is a vital financial tool that tracks your fundraising revenue pace for the current fiscal year against the previous two years.*

Monthly Giving Comparison Current vs Prior 2 yrs How to use the Monthly Giving Comparison Current vs Prior 2 yrs analysis This analysis provides a clear, month-by-month comparison of your organization's fundraising performance over the current and previous two fiscal years, structured according to your fiscal calendar (July-June). It aggregates all gift amounts by month and fiscal year, allowing you to quickly see trends, seasonal patterns, and the overall direction of giving. The analysis draws from your Gifts data, using each gift's date and amount, and computes total giving for each month in the current fiscal year, the prior fiscal year, and two years prior. For each month, it calculates the percentage change in giving between the current and previous year, flagging instances where new giving has emerged or where there has been a drop-off. You should use this analysis to understand not only aggregate giving but also identify months where fundraising has grown, stagnated, or declined, which is invaluable for end-of-year reviews or mid-year course corrections. The primary metrics-monthly giving totals and year-over-year percentage change-are essential for tracking the health of your donor pipeline. These figures can alert you to shifts in donor behavior, highlight successful campaigns, or signal the need for renewed outreach in specific months. By examining these trends, you can better forecast revenue, set realistic targets, and time your appeals for maximum effectiveness. Development directors and annual giving managers should review this analysis on a monthly basis. It is handy for identifying which periods require additional engagement or stewardship, and where to focus personalized outreach. To apply these insights, schedule regular team reviews to discuss months showing significant change, assign stewardship or solicitation priorities based on emerging trends, and adjust campaign calendars to align with your strongest periods. Success can be measured by increased year-over-year giving, greater consistency in monthly revenue, and improved donor retention rates, driven by timely and data-informed engagement. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines.

## 1.1: Year-over-Year Donation Trends

### QX38 Historical Summary Data Analysis

*This analysis (often used as a report) provides a comprehensive, year-over-year historical view of your fundraising program's core health metrics and KPIs.*

Historical Summary Data How to use the Historical Summary Data analysis This analysis provides a year-over-year summary of your donor activity, helping you track key trends in giving, retention, and donor engagement across fiscal years. Drawing from your gifts database, it aggregates all gift transactions by constituent (donor), determines each donor's total giving per fiscal year, and applies a fiscal year definition that aligns with typical nonprofit accounting by rolling the calendar year forward by six months. The analysis then compiles essential metrics such as the total number of donors, total amount raised, and, critically, how many donors were retained, newly acquired, or recaptured from lapses. It also calculates the number of donors lost each year, as well as average and median giving per donor metrics, which provide insight into both broad trends and shifts in donor generosity. You should use this analysis to monitor donor retention rates, which reveal how well you are engaging and retaining your supporters over time. The distinction between new, retained, and recaptured donors allows you to assess the success of both your acquisition and re-engagement strategies. The inclusion of both average and median giving per donor helps you spot changes in giving patterns-if the average is growing but the median stays flat, for example, you may be relying on a few large gifts rather than broad-based support. Consider sharing this output with your annual fund managers and major gift officers to inform their stewardship planning and campaign reviews. For actionable steps, fundraising directors and development officers should review this analysis at the close of each fiscal year and midway through the next, as part of their Constituent Intelligence routines. Use the retention and lapsed donor counts to prioritize which segments need renewed outreach or stewardship. If you notice a decline in new donor acquisition or average giving, it's a signal to adjust your appeals or donor engagement strategies. Additionally, tracking recaptured donors can help you refine your strategies for reactivating lapsed donors and evaluate the effectiveness of past campaigns. To measure the impact of using this analysis, you should track year-over-year improvements in retention rates, total dollars raised, and the proportion of donors who increase their giving or return after lapsing. Success is reflected in more stable or growing donor bases and increased giving per donor, which are critical for sustainable fundraising growth.

## QX85 Historical Year over Year Analysis

*This analysis provides a high-level, year-over-year view of donor retention, acquisition, and overall revenue to assess overall fundrasing success.*

Historical YOY Analysis How to use the Historical YOY Analysis analysis The Historical YOY Analysis gives you a year-over-year view of donor giving patterns, donor retention, and overall fundraising performance, all built from your actual giving data. By tracking each donor's total giving by fiscal year and categorizing them into dynamic segments based on giving thresholds (Top, Middle, and Bottom), you gain actionable insights into how different donor groups contribute to your mission over time. The analysis draws from the Gifts table, leveraging gift dates and amounts, and uses custom thresholds stored in your system to define donor tiers. It also identifies key donor lifecycle moments, such as who is retained, who is new, who has been recaptured after lapsing, and who has lapsed, so you can better understand the flow of your donor base. You will see annual metrics including the number of donors, total amount raised, median and average gift size, and the breakdown of giving by donor segment. The analysis calculates retention rates, lapsed donors, and the share of giving from top, middle, and bottom donors, all of which are essential indicators for evaluating the health and sustainability of your fundraising program. For instance, the retention rate indicates how well you're keeping donors engaged year after year, while the recaptured donor metric highlights your success in reactivating lapsed supporters. Strategically, this analysis empowers you to identify trends—such as shifts in donor retention, growing dependence on top donors, or changes in the median gift size—that should inform your stewardship and cultivation plans. If you notice a decline in retention or a spike in lapsed donors, you can target re-engagement campaigns more effectively. The segmentation allows you to tailor communication and recognition strategies for top, middle, and bottom donors, optimizing your approach for each group. Scheduling note: This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. Development directors and donor stewardship teams should review this analysis together, ideally before strategic planning cycles and after major campaigns. Use the insights to set retention goals, allocate stewardship resources, and personalize outreach, especially by focusing on recaptured and new donors to build long-term loyalty. Success should be measured by improvements in donor retention, growth in the number of recaptured donors, and increases in both total and median giving over time. Regular use of this analysis will help you make data-driven decisions, strengthen constituent relationships, and drive sustainable growth in fundraising.

## QX90 Middle Segment Gift Amount Trends (Annual) Analysis

*This analysis (often used as a report) provides a 15-year historical overview of your Middle donor segment across multiple KPI's.*

Middle Segment Gift Amount Trends (Annual) How to use the Middle Segment Gift Amount Trends (Annual) analysis This analysis provides a year-by-year view of giving patterns specifically among your Middle Segment donors over the past 15 full fiscal years. It draws from your Gifts data, applying fiscal year logic to align gifts with your organization's reporting calendar, and cross-references annual donor totals against the thresholds you've defined for what counts as a middle donor. By focusing only on years when a constituent s annual giving fell within this middle range, you get a precise measure of this segment s activity over time. The analysis highlights several key metrics for each fiscal year, including the number of unique middle donors, the total amount they donated, the average size of each gift, and the median gift amount. These metrics matter because they reveal both participation and giving trends within this crucial donor group-often the backbone of sustainable fundraising. For example, you can quickly spot whether the pool of middle donors is growing or shrinking, whether their giving per gift is increasing, and if the distribution of gifts is shifting (which helps you identify changes in donor behavior). You should use these insights to inform both annual planning and in-year engagement strategies. If you see a decline in the number of middle donors, consider targeted stewardship or reactivation campaigns. If average or median gift sizes are trending upward, you might explore tailored upgrade asks or cultivate major gift prospects from this segment. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure ongoing understanding of donor dynamics. Development directors, annual giving managers, and frontline fundraisers should all review this analysis together. Use the findings to set segment-specific goals, benchmark current performance, and identify which donors might benefit from more personalized outreach. If you supplement this analysis with additional columns—such as donor contact information or engagement history—you can further customize your approach for each middle donor, enhancing the value of every interaction. Success should be measured by monitoring increases in retention rates, average gift amounts, and the total giving from the middle segment after you've acted on the insights. You may also track the number of middle donors who move into higher segments as a result of targeted cultivation. By leveraging this analysis within your Constituent Intelligence toolkit, you can make smarter decisions and foster stronger donor relationships.

## QX91 Bottom Segment Gift Amount Trends (Annual) Analysis

*This analysis provides a historical overview of your entry-level donor segment, showing trends across a number of KPI's.*

Bottom Segment Gift Amount Trends (Annual) How to use the Bottom Segment Gift Amount Trends (Annual) analysis This analysis allows you to understand giving behavior among your lowest annual donor segment, the Bottom Segment, over the past 15 fiscal years. It leverages your organization's Gifts and Constituent data, specifically focusing on donors whose total giving in a fiscal year falls below or at a defined bottom_max threshold. By isolating gifts from these donors only during the years they met the bottom segment criteria, you gain a precise view of the volume, value, and typical size of gifts from this cohort. You will see, year by year, the number of unique bottom segment donors, the total amount they collectively gave, and the average and median size of their individual gifts. This segmentation ensures that trends accurately reflect genuine shifts in engagement among this specific group, rather than being diluted by the contributions of higher-tier donors. Key metrics include the number of bottom donors per year, total giving from this group, and both average and median individual gift amounts. These figures help you monitor the health of your entry-level donor pipeline, identify years of growth or decline, and spot patterns that may signal opportunities or risks, such as declining participation or shrinking gift sizes. You should use this analysis to better understand how your acquisition and retention strategies affect lower-tier donors and to inform tailored stewardship and upgrade efforts. For example, if you observe a downward trend in median gift amount, you might re-evaluate your messaging or entry-level appeals. If the number of donors in this segment is dropping, it may signal a need to strengthen acquisition or reactivation campaigns. An annual review by fundraising directors, annual fund managers, and donor relations staff is recommended, ideally as part of your Constituent Intelligence routines. Apply these insights to prioritize donor journeys, adjust communication frequency, and test new engagement tactics for this segment. Additionally, consider segmenting further by donor tenure or channel if you wish to personalize outreach even more. To evaluate the impact of this analysis, measure changes in bottom segment donor retention, total giving, and the rate at which these donors are upgraded to higher giving tiers over time. Success will be indicated by increased retention, higher gift totals, and a healthy pipeline of donors progressing beyond the bottom segment.

**Type:** Summary+Detail | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational
**Segments:** Bottom | Scope: Segment
**Variant Family:** Gift Amount Trends (Annual) (segment variants)
→ Also Try: QX94 Bottom Segment Gift Size Distribution An
→ Run First: QX172 Segmentation Break Points

## QX106 Overall Incremental Lift By Month Analysis

*This analysis is a monthly performance dashboard that show which months are contributing above expected to the current year's fundraising performance.*

High Lift Donors LFY AUG How to use the High Lift Donors LFY NOV analysis This analysis identifies donors who have significantly increased their giving in August of the last full fiscal year compared to their personal average for the same month across the prior three years. By focusing on this target month and measuring each donor's unique giving lift, you can pinpoint individuals who are exhibiting strong upward trends—your high lift donors—who may be primed for deeper engagement or recognition. The analysis uses your Gifts and Constituents data, examining each donor's giving in August over four years. It calculates the donor's average August giving for the three fiscal years before last year (establishing a personal baseline), then compares that to their actual giving in August of the previous fiscal year. Only donors whose most recent August giving exceeded their baseline are included, ensuring you focus on those with genuine, positive momentum. Key columns include not only the lift calculation, but also each donor s baseline average and actual giving in the latest August. These details support a more personalized approach-for example, referencing a donor's consistent loyalty or recent surge in giving during stewardship or cultivation outreach. The primary metric, Personal Incremental Lift ($), helps you move beyond generic segmentation. Rather than just looking at total giving or year-over-year change, you can identify and prioritize donors whose behavior signals a new level of commitment. This is especially valuable for year-end strategies, leadership gift prospects, and stewardship planning. You should assign this analysis to development officers for portfolio review, as well as to annual giving or stewardship teams who are planning touchpoints for the fiscal year. Use the outputs to trigger timely thank-you calls, targeted upgrade asks, or special recognition for donors whose support is accelerating. For major gifts officers, these donors may warrant qualification for deeper relationship building. Success can be measured by tracking subsequent retention and upgrade rates among high-lift donors, as well as by monitoring response rates to personalized outreach efforts that reference their recent giving lift. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you consistently capture and respond to emerging donor trends.

## QX106 Incremental Lift By Donor Segment Analysis

*This analysis provides insight into the incremental lift contribution to your giving total by each segment.*

Incremental Lift By Donor Segment How to use the Incremental Lift By Donor Segment analysis This analysis enables you to see, month by month, how giving from each donor segment-Top, Middle, and Bottom-has changed in the most recent completed fiscal year compared to the average of the three prior years. It draws on your Gifts data, using constituent IDs, gift dates, and amounts, as well as your organization's segment thresholds, to categorize donors by annual giving level for each of the last four fiscal years. By calculating a three-year monthly baseline and comparing it to actual giving in the previous fiscal year, the analysis reveals the incremental lift (or decline) in giving for each segment and month, expressed both in dollar value and as a percentage. With this analysis, you gain a clear view into seasonal or campaign-driven shifts in donor behavior within each segment. The key metric, "Incremental Lift (%)", indicates the percentage change in giving compared to the historical average, enabling you to identify which segments are outperforming or underperforming expectations quickly. Understanding these patterns is crucial for making informed decisions, whether you're planning stewardship, appeals, or reallocating resources for acquisition and retention. Use this analysis to identify periods when giving surged or lagged, and tailor your engagement accordingly. For example, if "Top" donors gave significantly more in a particular month, examine what campaigns or communications drove that lift and consider replicating those strategies. Conversely, if "Middle" or "Bottom" donors dipped below baseline, it may signal a need for re-engagement or a fresh approach. Reviewing this analysis as part of your Constituent Intelligence routines ensures you stay attuned to real-time shifts and can act proactively. Fundraising directors, development officers, and campaign managers should review this analysis on a monthly or quarterly basis. Use the insights to inform segment-specific outreach, adjust annual fund strategies, and set realistic, data-driven targets for upcoming periods. Success can be measured by tracking increases in incremental lift percentages over time, improved retention within segments, and more effective allocation of staff and budget to areas showing the greatest opportunity or need. By integrating these insights into your Constituent Intelligence practices, you can deepen donor relationships and maximize fundraising outcomes.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective | Audience: Operational
**Segments:** Top, Middle, Bottom | Scope: Segment

**Collections:** Annual Fund Health Check
**Workflows:** Annual Fundraising Review (Step 9)
→ Drill Down To: QX107 Incremental Lift by New/Existing

## QX107 Incremental Lift by New/Existing Analysis

*This analysis (often used as a report) provides a detailed performance review between last year and the average over the prior three years.*

Incremental Lift by New/Existing How to use the Incremental Lift by New/Existing analysis This analysis enables you to measure how giving from new and existing donors in each month of the most recent fiscal year compares to a three-year historical average, broken out by donor lifecycle stage. It draws on your last four years of gift data, tagging each donation as either from a "New Donor" (their very first gift) or an "Existing Donor" (any subsequent gift), based on the donor's entire giving history. For each calendar month, it calculates two key metrics for both groups: the average monthly giving over the baseline period (the three fiscal years prior to last year) and the actual giving in the most recent full fiscal year. The analysis then computes the "Incremental Lift (%)", which shows the percentage change in giving compared to the historical average. You can use this to pinpoint months and donor segments where your fundraising efforts are outperforming or underperforming the typical pattern, helping you assess the effectiveness of recent campaigns, stewardship, or appeals. The side-by-side comparison of new versus existing donors allows you to see whether your strategies are driving more first-time gifts, retaining donors, or increasing gift amounts. The most important calculations to focus on are the "Baseline Giving (3yr Avg)", "Actual Giving (Last FY)", and "Incremental Lift (%)". These tell you not only whether giving is up or down, but also highlight seasonal trends and the relative impact of your outreach on different donor groups. Identifying months with strong positive lift among new donors, for example, can help you replicate successful acquisition tactics. In contrast, negative trends among existing donors may signal a need for renewed stewardship or re-engagement. You should schedule this analysis for regular review as part of your Constituent Intelligence routines. Directors of development, annual giving managers, and donor stewardship teams will benefit most from these insights. Use the findings to tailor your communication calendar, plan targeted campaigns, and set realistic monthly performance benchmarks for both acquisition and retention. For example, if you observe a dip in existing donor giving in the first quarter, consider launching a stewardship initiative during that period. If a new donor giving spikes in a particular month, analyze which campaigns contributed and consider scaling them. To measure success, track whether your monthly incremental lift improves year-over-year, especially in priority donor segments. You should also monitor whether adjustments in your outreach lead to stronger retention of new donors and higher average gifts from existing supporters. By integrating this analysis into your Constituent Intelligence toolkit, you can make more informed, data-driven decisions that directly support your fundraising goals.

### QX162 Simple YOY Retention by Segment View

*This analytic calculates the year-over-year retention rate for each donor segment ('Top', 'Middle', 'Bottom') based on historical giving data.*

This analysis calculates the year-over-year retention rate of donors segmented into 'Top', 'Middle', and 'Bottom' based on their historical giving data. It leverages thresholds defined in a separate table to classify donors into these segments according to their total contributions. The data utilized includes donor IDs, gift amounts, and gift dates, allowing for a comprehensive view of donor behavior over time. Key calculations within this analysis include the determination of how many unique donors fall into each segment for each fiscal year, as well as the count of those who continue donating in the subsequent year, specifically within the same segment. This approach allows you to understand retention not only by segment but also overall, which is crucial for identifying trends in donor loyalty. The insights derived from this analysis are invaluable for strategic decision-making. By knowing the retention rates across different donor segments, you can identify which groups are most engaged and which may need additional outreach or support. For instance, if the retention rate for 'Top' donors is significantly higher than that of 'Bottom' donors, you might focus your efforts on enhancing the engagement strategies for the lower segment to boost their loyalty. You should consider running this analysis at the end of each fiscal year, as it will provide a clear picture of how effective your donor engagement strategies have been over the past year. Development officers and fundraising directors should review the findings to adjust strategies accordingly. For instance, if you notice a decline in retention within a particular segment, it may be an opportunity to implement targeted campaigns to re-engage those donors. To measure the success of applying insights from this analysis, you can track changes in retention rates over time after implementing new strategies. Additionally, monitoring the overall increase in total donations from each segment can provide a direct measure of the impact your adjusted engagement efforts are having. Evaluating donor feedback after specific outreach initiatives can also give qualitative insights into whether your strategies resonate with donors, further refining your approach.

## 1.2: Revenue Concentration Analysis

### QX83 Top 50 Gifts Last Fiscal Year Analysis

*This analysis (often used as a report) reveals the organization's reliance on its most generous supporters.*

Top 50 Gifts Last FY How to use the Top 50 Gifts Last FY analysis This analysis identifies the 50 largest gifts received by your organization in the last full fiscal year. Use this as another way to quickly see how much of your annual fundraising relies on your largest donors, and how concentrated your fundraising base is, as well as how much of your overall giving revenue comes from this segment of large gifts.  .These numbers matter because they reveal your organization's fundraising dependency on a select group and highlight opportunities or risks if those donors change their behavior. Strategically, you should review this last fiscal year analysis annually as part of your Constituent Intelligence routines. Development directors, major gifts officers, and stewardship teams should utilize these insights to prioritize relationship-building efforts, establish realistic fundraising targets, and design personalized engagement plans for their top donors from this list.

**Type:** Summary+Detail | Lifecycle: Portfolio Management | Time: Retrospective (LFY) | Audience: Operational

### QX145 Historical Individual vs Organizational

*Historical analysis of the annual giving split between individual donors and organizational donors.*

This analysis provides a comprehensive view of the annual giving landscape by comparing contributions from individual donors versus organizational donors. It utilizes data on gifts made over multiple fiscal years, classifying each donor based on whether they are an individual or part of an organization. The analysis calculates total giving amounts, the number of donors in each category, and identifies top-tier individual donors based on a specified minimum giving threshold. The key calculations include the total annual giving for individuals and organizations, the number of unique donors in each category, and median contributions for both top individuals and organizations. Understanding these metrics is essential as they reveal not only the overall financial contributions but also highlight the engagement levels of different donor segments. For instance, tracking the number of top segment individuals can help you identify your most valuable supporters, while assessing organizational giving can provide insights into how well you are engaging with corporate partners. Strategically, this analysis equips you with critical insights to refine fundraising strategies and enhance donor relationships. By understanding the trends in individual versus organizational giving, you can tailor your outreach efforts. For example, if individual giving is declining, you might consider strategies to re-engage those donors through personalized communication or targeted campaigns. Conversely, if organizational giving is strong, you may want to explore ways to deepen these partnerships or leverage them for matching gift opportunities. You should consider running this analysis annually, ideally at the close of the fiscal year, to align with your reporting and strategy planning cycles. Development officers, fundraising directors, and donor relations teams should review the findings to inform their strategies. The insights can guide decisions on where to allocate resources for donor engagement efforts, helping you to strengthen relationships with both individual and organizational supporters. To measure the success of using this analysis, track changes in donor retention rates, the growth of contributions from both segments over time, and the effectiveness of targeted campaigns based on the insights gained. You could also evaluate the impact of specific initiatives aimed at increasing engagement with top-tier individual donors or enhancing connections with organizational partners, looking for measurable increases in giving or participation in fundraising events. By leveraging the insights from this analysis, you can drive more effective fundraising strategies and foster stronger, more meaningful connections with your donor base.

## 1.3: Gift Size Distribution Analysis

## QX41 Giving Pyramid Analysis Last Fiscal Year

*This analysis breaks down your fundraising results from the last full fiscal year into a "giving pyramid," showing sizes and counts of gifts by size level.*

Giving Pyramid Analysis LFY How to use the Giving Pyramid Analysis LFY analysis This analysis transforms your last full fiscal year's gift data into a clear giving pyramid, allowing you to visualize the distribution of donors and gifts across different giving levels. By categorizing each gift from the Gifts table by amount into familiar ranges (for example, $0-$ 99.99, $100-$ 499.99, up to $100,000+), you gain immediate insight into how your donor base is structured, from grassroots supporters to major donors. The analysis draws on every gift made during the last complete fiscal year, automatically adjusting for your fiscal calendar, and summarizes several key metrics for each giving level: the number of gifts, the number of unique donors, the total dollars contributed, as well as the average, median, smallest, and largest gift sizes. This set of analyses is compelling for fundraising strategy because it not only shows where your revenue is concentrated, but also highlights areas for growth and improvement. The calculation of the percentage of total giving by level clarifies which donor segments drive your fundraising results and which are underrepresented. Metrics like median and average gift size help you understand typical giving behavior at each level, revealing opportunities for targeted stewardship or upgrades. You should use these insights to identify gaps in your pyramid, such as a thin mid-level or an overreliance on a handful of major donors, and design tailored cultivation and solicitation strategies. Fundraising directors and development officers should review this analysis together as part of regular Constituent Intelligence routines-ideally quarterly or after major campaigns. Use it to prioritize your portfolio management: for instance, assign stewardship actions to retain top-tier donors, or identify prospects for mid-level upgrades. Additionally, you can focus outreach on expanding the base at entry-level tiers, or mobilize board members to help fill gaps in the pyramid. Success can be measured by tracking year-over-year improvements in donor retention and upgrades within each level, as well as by the diversification of gift sources and increased stability in overall revenue. By integrating these insights into your strategic planning, you'll strengthen donor relationships and build a more resilient fundraising program.

## QX92 Top Segment Gift Size Distribution Analysis (Annual)

*This analysis provides a 15-year historical overview of your top donor segment, breaking down the distribution of individual gift sizes by percentile.*

Top Segment Gift Size Distribution Analysis (Annual) How to use the Top Segment Gift Size Distribution Analysis (Annual) analysis This analysis provides a detailed, year-by-year view of giving patterns among your top donors over the past 15 completed fiscal years, utilizing your organization's Gift, Thresholds, and Constituent data. It calculates, for each fiscal year, which donors reached or surpassed your defined top annual giving threshold and then examines the full range of their gifts for that year. You can use this to see not only how many donors qualified as Top each year, but also the exact distribution of gift sizes within that segment, including the total given by the group, the 25th, 50th (median), and 75th percentile gift values, and the single largest gift. These metrics enable you to identify shifts in giving patterns, such as whether your top donors are becoming increasingly concentrated among a few very large gifts or whether the group is broadening, and to measure the impact of stewardship efforts or major campaigns. You should review this analysis at least annually-ideally as part of your Constituent Intelligence routines-but consider more frequent reviews if you are planning a campaign or reassessing major gift strategies. Development directors, prospect managers, and annual fund leaders should use the insights to tailor stewardship and solicitation strategies and identify opportunities for personal outreach. For instance, a sudden jump in the 75th percentile gift might signal a few donors increasing their support, warranting personalized recognition or cultivation. If the number of top donors is declining, you should investigate retention and engagement tactics. Apply the findings by adjusting your stewardship plans for top donors, targeting those who are near the threshold for upgrade opportunities, and ensuring that your segmentation accurately reflects current donor behavior. Measure success by tracking increases in top-segment retention, total dollars raised from this group, and movement of donors into higher giving brackets year over year. This analysis empowers you to deploy resources more effectively and strengthen your most valuable donor relationships.

**Type:** Summary+Detail | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational

→ Also Try: QX89 Top Segment Gift Amount Trends (Annual)
→ Run First: QX172 Segmentation Break Points

## QX93 Middle Segment Gift Size Distribution Analysis (Annual)

*This analysis (often used as a report) provides a 15-year historical overview of the sizes of gifts from your mid-level donor segment.*

Middle Segment Gift Size Distribution Analysis (Annual) How to use the Middle Segment Gift Size Distribution Analysis (Annual) analysis This analysis helps you understand long-term giving patterns among your Middle donor segment over the past fifteen fiscal years. It draws on your gifts and constituent records, focusing on annual giving totals for each donor and identifying those who fall within your organization's defined Middle giving thresholds for any given year. Once Middle donors are identified for each year, they are examined for all gifts they made during their qualifying years, while ensuring that only living donors are included. You gain year-over-year insights into how many donors qualified for the Middle segment, how much they collectively contributed, and the distribution of individual gift amounts within the segment. Key metrics calculated in this analysis include the number of Middle donors per year, total giving from this segment, and important gift size percentiles-the 25th, 50th (median), and 75th percentiles-along with the largest gift made in each year. These percentile figures help you understand the typical and outlier gift sizes, allowing you to set appropriate ask amounts, stewardship strategies, and campaign targets. By tracking these metrics annually, you can spot trends, such as segment growth, contraction, or changes in giving behaviors, that inform your fundraising planning. Strategically, you should use these insights to refine your engagement tactics with Middle donors. For example, if you see that the median gift is rising, you might adjust your suggested gift amounts or stewardship tiers accordingly. If you notice donor counts declining, you may want to prioritize retention efforts or develop targeted upgrade strategies. This analysis is particularly useful for annual giving managers, major gifts officers, and any team members responsible for donor segmentation and mid-level donor programs. Development leadership should review the analysis when setting budget projections or prioritizing relationship-building efforts. You can apply these insights to personalize outreach, set more accurate fundraising goals for the Middle segment, and identify opportunities for donor upgrades. You may want to supplement the analysis with additional donor-level details, such as engagement history or communication preferences. In that case, you'll be even better equipped to tailor your stewardship and maximize donor lifetime value. Schedule this analysis to be reviewed periodically as part of your Constituent Intelligence routines. To evaluate its impact, track metrics such as year-over-year retention in the Middle segment, changes in average and median gift size, and the number of donors successfully upgraded to higher segments. Consistent use will help you make more informed, data-driven decisions that drive sustained fundraising growth.

**Type:** Summary+Detail | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational

→ Also Try: QX90 Middle Segment Gift Amount Trends (Annua
→ Run First: QX172 Segmentation Break Points

## QX94 Bottom Segment Gift Size Distribution Analysis (Annual)

*This analysis provides (often used as a report) historical overview of your bottom donor segment, breaking down the distribution of individual gift sizes by percentile.*

Bottom Segment Gift Size Distribution Analysis (Annual) How to use the Bottom Segment Gift Size Distribution Analysis (Annual) analysis This analysis provides you with a year-by-year view of gift size patterns among your lowest annual giving donors, defined as the bottom segment, based on a customizable threshold. Drawing on 15 years of gift data, it isolates donors whose total giving in any given fiscal year fell below your institution's defined bottom_max threshold, ensuring the group analyzed truly reflects your entry-level or least-engaged annual supporters. For each fiscal year, you see the number of bottom segment donors, the total contributed by this group, and key statistics about the actual gift amounts they made, such as the 25th, 50th (median), and 75th percentile gift sizes, as well as the largest single gift within the segment. By surfacing these metrics, you gain clear visibility into the range and typical size of gifts among your most modest annual donors. This helps you benchmark the impact of outreach and stewardship strategies targeted to this group, and identify trends, such as shifts in median gift size or the emergence of higher-than-expected gifts at the top end of the segment. If your analysis includes individual donor listings and additional columns-such as donor contact preferences, recency, or engagement scores-you can tailor your communications and stewardship to reflect not only their giving level but also their broader relationship with your organization. Use this analysis to inform decisions about segmentation, renewal strategies, and personalized appeals for bottom-segment donors. Development directors, annual giving managers, and frontline fundraisers should review it regularly-at least annually, but ideally as part of your quarterly Constituent Intelligence routines-to assess the health and potential of your donor base s entry tier. Consider adjusting ask amounts, stewardship touchpoints, or upgrade campaigns based on what you learn about typical gift sizes and year-over-year trends. If you notice the median gift rising, you may have opportunities to encourage more ambitious giving or to identify donors ready for mid-level cultivation. To measure success, track changes in the number of bottom-segment donors retained year-over-year, improvements in median or total giving from this segment, and the percentage of donors moving up to higher giving levels. Ultimately, using this analysis strategically should help you grow both donor retention and gift size at the foundational level of your giving pyramid, strengthening your overall fundraising program.

### QX179 Giving Pyramid Detail -Donor View

*This analytic provides a donor centric view of the gifts that make up the Giving Pyramid.*

The Giving Pyramid Detail - Donor View analysis provides a comprehensive examination of individual donor gifts within the current fiscal year. The analysis focuses on categorizing donor contributions into various tiers based on the gift amount, allowing you to understand the distribution of donations across different levels. It utilizes data from the Gifts table, concentrating exclusively on donations made in the current fiscal year, which is calculated by adding six months to the current date to align with many fiscal year reporting standards. The analysis breaks down donor gifts into six monetary categories: less than $100, between $100 and $499.99, between $500 and $2,499.99, between $2,500 and $9,999.99, between $10,000 and $99,999.99, and $100,000 and above. For each donor, it calculates the count and total amount of gifts in each category, providing a clear view of their contribution patterns. Additionally, it summarizes the total number of gifts and the total giving amount for each donor throughout the year. These metrics are crucial as they help pinpoint where most donations are concentrated, identify major donors, and recognize potential growth areas within your donor base. By examining these tiers, you can tailor your engagement strategies, such as personalized communications or targeted campaigns, to different donor segments, thereby enhancing the effectiveness of your fundraising efforts. To maximize the strategic value of this analysis, consider running it at the end of each quarter to track changes and trends in donor behavior over time. Development officers and fundraising directors should review the findings to identify both high-value donors and those who might be encouraged to increase their giving. The insights can also guide the planning of donor recognition programs or the allocation of resources to cultivate relationships with donors poised to move into higher giving tiers. Success measures for this analysis could include an increase in donor retention rates, growth in average donation size, and a higher number of donors transitioning to upper giving tiers. By assessing these outcomes, you can gauge the effectiveness of strategies informed by this analysis and make data-driven decisions to optimize your fundraising initiatives.

## 1.4: Seasonal Giving Patterns

## QX7 Giving Tuesday Only Donors Analysis

*This analysis isolates a transactional group of donors who only give on Giving Tuesday, highlighting an opportunity to build a deeper relationship.*

Giving Tuesday Only Donors How to use the Giving Tuesday Only Donors analysis This analysis identifies donors who have given exclusively on Giving Tuesday over the past five fiscal years. Drawing on your gift transaction history, it focuses on individuals whose only recorded gifts during this period were made specifically on the recognized Giving Tuesday dates. The analysis leverages gift dates, donor identifiers, and supporting details, such as whether the donor is flagged as an organization or an individual, helping you pinpoint a unique donor segment with highly concentrated giving behavior. By calculating both the total number of gifts per donor and the proportion of those gifts that fall on Giving Tuesday, this analysis highlights constituents whose engagement is entirely tied to this single annual campaign. This specificity matters because it surfaces individuals who may be responsive only to highly visible, time-bound appeals, and who have not participated in your fundraising efforts at other times. You can use these findings to refine your stewardship and campaign planning, as these donors present both a retention opportunity and a challenge to deepen their involvement. In addition to core metrics, the analysis includes columns such as each donor s name and whether they are an individual or organizational donor. These supporting details enable you to craft more personalized follow-up strategies, tailoring outreach to donor type and past communication preferences. With this intelligence, your team can segment communications, recognize Giving Tuesday loyalty, and experiment with targeted asks outside of the Giving Tuesday window. You should have major gift officers, annual fund managers, and digital fundraising leads review this analysis as part of your Constituent Intelligence routines, ideally in the weeks following Giving Tuesday and ahead of yearly planning. First, consider sending personalized thank-yous that reference their Giving Tuesday support. Second, develop a re-engagement sequence to invite these donors to participate in other campaigns or events throughout the year. Third, analyze whether specific demographics or organizational connections are overrepresented in this group, informing your acquisition and stewardship strategies. To measure success, track year-over-year retention of these donors, monitor conversion rates as you invite them to participate outside Giving Tuesday, and assess any lift in overall giving amounts attributable to targeted outreach. By integrating this analysis into your regular review cycle, you can drive smarter engagement and better donor outcomes.

## QX103 Monthly Fundraising Baseline Analysis

*Seasonal-Monthly Fundraising Baseline (often used as a report). Historical 3 year avg revenue and donor count for each month of the year.*

Monthly Fundraising Baseline How to use the Monthly Fundraising Baseline analysis This analysis establishes your organization's typical monthly fundraising performance by calculating the average revenue and donor count for each calendar month across the past three fiscal years. By focusing on the most recent three-year period, it provides an up-to-date and seasonally sensitive baseline that reflects real donor behavior. The data is drawn directly from your gift and constituent records, identifying every donor's fiscal year engagement and then categorizing their status as New, Retained, or Recaptured for each year. This segmentation allows you to see not only overall monthly trends but also how different donor cohorts contribute to your fundraising outcomes throughout the year. Key metrics produced include the average total giving per month, the average number of unique donors per month, and the average giving amounts segmented by donor status: Retained, New, and Recaptured. Understanding these patterns is vital: for example, a spike in giving from New donors in December might indicate successful acquisition campaigns, whereas consistent giving from Retained donors in May could reflect the strength of your stewardship efforts. By comparing current performance against these baselines, you can quickly identify when a month is underperforming or exceeding expectations, and which donor group is driving those changes. You should use this analysis to inform campaign planning, budgeting, and donor communications strategy. Development directors and annual giving managers will find it particularly useful for setting realistic monthly targets, timing appeals to coincide with seasonal giving peaks, and assessing the impact of new initiatives. For example, if you notice a dip in Retained donor giving during the summer months, you might schedule targeted stewardship touchpoints in late spring. Additionally, these insights can help you craft more personalized outreach by focusing on the donor status segments that are most responsive in each period. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. Review it before launching major campaigns, during quarterly fundraising reviews, and when forecasting revenue to ensure accuracy. Success should be measured by improved accuracy in monthly revenue projections, increased retention or reactivation of lapsed donors, and the ability to proactively address unexpected dips in giving. By embedding these insights into your workflow, you ll strengthen donor relationships and maximize fundraising effectiveness throughout the year.

# 1.5: Donor Lifecycle Analysis

## QX9 $1MM Threshold Analysis

*This analysis pinpoints the exact moment each of your donors crossed the threshold into your top giving tier, providing a detailed look at their journey.*

$1MM Threshold Analysis How to use the $1MM Threshold Analysis * analysis This analysis identifies and details every donor whose cumulative giving has just reached or surpassed the $1 million threshold, allowing you to pinpoint when key donors enter your top giving segment. It draws on your gift transaction data, constituent profiles, and a customizable set of giving thresholds to surface the exact gift and date when a donor's lifetime giving total exceeds $ 1 million. For each donor, it highlights the donor's name, the gift that triggered their entry into the $ 1 million+ category, their total giving to date, and additional supporting details, such as their largest single gift and giving before crossing the threshold. These supporting fields are valuable for crafting highly personalized acknowledgments and engagement strategies, as they help you understand both the pace and nature of a donor's giving. The primary calculation tracks the running total of each donor s giving history, then flags the specific gift that brings their total above the $1MM mark, along with how much they d given before and after that gift. This allows you to celebrate the milestone with precision, ensuring your outreach is both timely and meaningful. Including the donor s largest gift amount and the full total giving also provides context for stewardship planning, recognizing not just the milestone itself but the donor s overall pattern of support. Strategically, use this analysis to prioritize high-value stewardship and cultivate deeper relationships with your most significant donors as they cross a transformational threshold. This insight supports board updates, campaign planning, and major gift officer portfolios, ensuring that you never miss a key moment of donor engagement. The analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines so that you can respond quickly to new milestones. Development leadership, major gift officers, and stewardship managers should review this analysis at least quarterly to ensure ongoing effectiveness. Use the insights to trigger personal recognition touchpoints, tailor proposals for leadership giving, and update donor segmentation for future campaigns. Success can be measured by tracking increased retention and upgrade rates among donors identified by the analysis, as well as the timeliness and personalization of stewardship actions following each threshold crossing. By leveraging this analysis, you deepen donor loyalty and maximize the value of your Constituent Intelligence program.

## QX136 Annual Tier Transition Stats- Basic Analysis

*This is a high-level, strategic analysis (often used as a report) that measures the health and fluidity of your donor pipeline.*

Annual Tier Transition Stats- Basic How to use the Annual Tier Transition Stats- Basic analysis This analysis provides a clear, year-over-year view of how your donors transition between giving tiers — Top, Middle, and Bottom—based on their annual giving totals. By examining your Gifts data and classifying each donor by segment for every fiscal year, it then tracks whether each donor upgrades, downgrades, maintains their segment, or lapses the following year. The thresholds that define each segment are drawn from your organization's own standards, ensuring that the segmentation aligns with your unique fundraising model. At its core, this analysis calculates the percentage of donors in each tier who take each possible transition path: upgrading to a higher tier, maintaining their current position, dropping to a lower tier, or lapsing (not giving at all the following year). These transition rates are essential for understanding not just retention, but the health and momentum of your donor pipeline. By filtering out deceased constituents and excluding the most recent fiscal year (since transitions can't be measured for donors who have not yet had a next year), it focuses on actionable, up-to-date insights. You can use these findings to strengthen your Constituent Intelligence efforts. For example, seeing a high upgrade percentage among Bottom-tier donors might prompt you to invest in targeted cultivation or stewardship for that group. If you notice that middle-tier donors have a high lapse or downgrade rate, it signals a need to reinforce engagement before attrition sets in. The analysis also helps you identify which segments are most stable, letting you allocate resources for maximum impact. Fundraising directors and development officers should review this analysis at least annually, ideally as part of regular Constituent Intelligence routines. Major gift officers can use the insights to prioritize outreach to donors likely to upgrade, while stewardship teams can design interventions for those at risk of lapsing or downgrading. Consider sharing results with your board or leadership to highlight progress and inform strategy. Success should be measured by tracking improvements in upgrade and maintenance rates, reductions in lapses, and ultimately, growth in total giving from each segment over time. If you use this analysis to guide targeted interventions and then see positive movement in these metrics, you can be confident your Constituent Intelligence approach is driving stronger donor relationships and program outcomes.

## QX137 Annual Tier Transition Analysis-By Tier

*This detailed analysis provides a year-over-year "map" of donor movement between segments.*

Annual Tier Transition Analysis-By Tier How to use the Annual Tier Transition Analysis-By Tier analysis This analysis provides a year-over-year view of how your donors move between giving tiers-Top, Middle, Bottom, or Lapsed-based on their annual giving totals. By examining every donor's giving history, it assigns each donor to a segment for every fiscal year, then tracks whether they moved up, moved down, maintained their segment, or lapsed the following year. The underlying data comes from your Gifts and Constituents records, using gift dates and amounts to segment donors and thresholds set for each tier. The analysis is across fiscal years, so your annual segmentation aligns with your organization's calendar. You will see, for each segment and fiscal year, how many donors started in that segment, and the percentage who remained, upgraded, downgraded, or stopped giving the next year. For instance, you can quickly identify whether middle-tier donors are more likely to lapse or view the retention rate for your top donors. This enables you to pinpoint which segments require more focused stewardship and which transitions should be celebrated or further investigated. The analysis also ensures that deceased donors are excluded to provide clean, actionable results. Key metrics, such as Maintain/Transition to Top %, Transition to Middle %, Transition to Bottom %, and Transition to Lapsed %, are crucial for evaluating the health of your donor pipeline. High retention within a segment signals strong engagement, while a high lapse rate or drop-off points to risk areas that require immediate attention. Segment-level transitions highlight where your fundraising investments are paying off or where you may need to innovate your approach. You should schedule this analysis for periodic review as part of your Constituent Intelligence routines, especially ahead of campaign planning or stewardship strategy sessions. Fundraising directors, major gifts officers, and annual fund managers should all review the findings. Use the insights to tailor stewardship plans, focusing on re-engaging segments at risk of lapsing, rewarding and building upon successful upgrades, and customizing messaging based on a donor's transition history. Measure your success by tracking improvements in donor retention rates within each segment, reductions in lapse rates, and increases in the percentage of donors moving up a tier year over year. Over time, effective use of this analysis will strengthen your pipeline, boost donor lifetime value, and allow for more personalized, data-driven engagement strategies.

## QX170 3-Year Consecutive Donor Value Detail

*This detail report lists individual donors who established a three-year consecutive giving streak, categorized by their giving segment in the third year, and determines whether they were retained in the subsequent fourth year. It provides a granular view of loyalty by showing each donor's retention outcome ("Retained" or "Lapsed") alongside their total four-year giving impact and lifetime value.*

This analysis identifies individual donors who have maintained a consecutive giving streak over three years and evaluates their retention status in the fourth year. By categorizing these donors based on their giving segment in the third year, you gain valuable insights into donor loyalty and engagement. The analysis draws on data from your Gifts and Constituents tables, focusing on gift amounts, donor identities, and segments defined by established thresholds. The aim is to assess whether these donors continued their support into the fourth year, thus providing clarity on donor retention. Key metrics include the total giving amount in the fourth year, the total giving over the four-year span, and the cumulative lifetime giving for each donor. The categorization of donors into segments-Top, Middle, or Bottom-based on their giving amounts helps you understand patterns in donor behavior and loyalty. The retention classification, denoted as "Retained" or "Lapsed," offers actionable insights into which donor segments are engaging effectively with your organization and which may require additional attention or strategies to improve retention. Utilizing this analysis allows you to make informed decisions regarding fundraising strategies and donor engagement. By assessing donor loyalty, you can tailor your communication and outreach efforts to enhance relationships with high-value donors while identifying opportunities to re-engage lapsed donors. This understanding of donor behavior helps you allocate your resources more effectively, ensuring that you focus on segments that yield the highest returns. You should consider running this analysis at the end of each fiscal year to capture the most recent data on donor retention. It is particularly useful for fundraising directors and development officers who are responsible for donor engagement strategies. Reviewing the insights can lead to targeted campaigns aimed at retaining high-value donors or revitalizing relationships with those who have lapsed. To measure the success of implementing this analysis, monitor the retention rates of donors categorized as "Retained" in subsequent years. Additionally, track any increases in giving amounts from these segments and evaluate the effectiveness of tailored engagement strategies. This will help you assess whether your organization is effectively utilizing the insights from the analysis to enhance donor relationships and improve overall fundraising outcomes.

## QX170 3-Year Consecutive Donor Value -Needs Work Analysis

*This analysis (often used as a report) analyzes the retention of your most loyal donors, those who have given for three consecutive years.*

3-Year Consecutive Donor Value -Needs Work How to use the 3-Year Consecutive Donor Value -Needs Work analysis This analysis identifies donors who have given for three consecutive fiscal years prior to the most recently completed fiscal year, allowing you to understand patterns of consistent giving and predict future retention potential. Drawing on your Gifts and Thresholds data, it calculates each qualifying donor's total and average giving for those three baseline years, then tracks whether they continued giving in the most recent year. By segmenting donors into tiers based on your organization's own giving thresholds, you can highlight both the average and median annual giving to pinpoint which donors are trending toward higher value or may require more attention to retain. You gain a clear view of key metrics, including the number of consecutive donors in each giving segment, their average and median annual giving, retention rates through the latest fiscal year, and total giving from those retained. This helps you compare the performance of different donor cohorts—such as those whose average or median giving meets or falls short of your Top Tier threshold—so you can prioritize stewardship efforts. For donors who continued giving, you can also view their average giving in the last year, making it easier to spot upgrades or declines. This analysis is most valuable when reviewed by your fundraising directors, annual giving teams, and major gifts officers as part of your Constituent Intelligence routines. Use it to identify loyal donors with high upgrade potential, flag those at risk of lapsing, and refine your segmentation for appeals or stewardship campaigns. For example, if you see strong retention but stagnant giving in a segment, you might introduce tailored upgrade asks; if retention drops among mid-level donors, consider enhanced recognition or personal outreach. Assign responsibility for reviewing these trends and following up with targeted strategies for each cohort. To measure success, track changes in retention rates, average annual giving, and the proportion of donors advancing to higher giving tiers over time. You should see improved retention and increased giving in your most engaged segments if you use these insights to focus your efforts and personalize your approach.

**Type:** Summary+Detail | Lifecycle: Retention, Lapse Prevention | Time: Retrospective (Multi-Year) | Audience: Operational

# 1.6: Cohort Analysis by Year and Month

## QX22 Upgrade/Downgrade Patterns All Donors Analysis

*This report provides a historical analysis of how your most valuable donors move between giving tiers from one year to the next.*

Upgrade/Downgrade Patterns All Donors How to use the Upgrade/Downgrade Patterns All Donors -Review Later analysis This analysis tracks year-over-year giving patterns for all donors, specifically focusing on whether each donor has upgraded, downgraded, or maintained their annual giving between fiscal years. It uses your historical giving data, grouping each donor's gifts by fiscal year (adjusted for a July-June fiscal year), and then segments donors into "Top" or "Middle" tiers based on annual giving thresholds you define in your Thresholds table. The analysis then compares each donor's giving tier from one year to the next, labeling their transition as an upgrade (moving from Middle to Top), downgrade (from Top to Middle), or maintained (staying in the same tier). You will see, for each fiscal year pair and giving tier, the number of donors who upgraded, downgraded, or maintained their tier, along with average and median gift totals for each group. The percentage calculation helps you quickly assess the proportion of each transition type within a tier, making it easy to spot trends such as retention among top donors or opportunities for middle-tier donors to move up. These metrics are central to Constituent Intelligence, allowing you to measure the effectiveness of your stewardship and upgrade strategies over time. Use this analysis to identify patterns in donor mobility and inform targeted engagement efforts. For example, if you see a high rate of downgrades among top-tier donors, it may prompt a review of your stewardship practices. Conversely, a healthy rate of upgrades from middle to top tier signals effective engagement or campaign strategies that could be replicated. Fundraising directors, annual giving managers, and anyone responsible for donor retention and growth should review this regularly to inform both mass and personalized outreach efforts. Scheduling note: This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. To apply these insights, you can prioritize personal outreach to donors who have recently downgraded, as they may be at risk of further attrition, and celebrate or further engage those who have upgraded as potential major gift prospects. Success can be measured by tracking increases in upgrade rates, decreases in downgrades, and overall improvement in donor retention within each giving tier across review cycles. Consistently leveraging this analysis will help you fine-tune your donor journey strategies and ultimately drive stronger fundraising outcomes.

# 1.7: Tenure & Lifetime Value (LTV) Analysis

## QX8 Top Level Donor Loyalty Analysis

*This analysis analyzes the long-term loyalty of your major donors, focusing on the consistency of their top-tier support over many years.*

Top Level Donor Loyalty Analysis How to use the Active Top Level Donor Loyalty Analysis analysis This analysis identifies and profiles your most loyal top-level donors, focusing on those whose annual giving has consistently met or exceeded your organization's "top donor" threshold. Using data from constituent records and gift histories, the analysis calculates several key loyalty metrics, including the total number of years a donor has given at the top tier, their longest streak of consecutive top-tier years, and whether they are currently maintaining such a streak. It also highlights each donor's total lifetime giving and the most recent year in which they contributed, providing a comprehensive picture of their engagement trajectory. You will find that the analysis not only surfaces the core loyalty calculations but also provides supporting information, such as donor names, whether the donor is an organization, and their deceased status. These additional columns are essential for personalizing your stewardship and tailoring outreach, allowing your team to recognize organizational donors differently and to avoid outreach to deceased individuals. The primary metrics — current consecutive streak, maximum consecutive years, total years at top level, and most recent gift year—clarify which donors are sustaining or increasing their high-level support, and which may be at risk of lapsing. For instance, a declining current streak or an absence of a recent gift may indicate a need for immediate engagement. Conversely, a long consecutive streak highlights donors worthy of special recognition or cultivation for legacy giving. Strategically, you can utilize these insights to prioritize relationship-building with your most loyal supporters, to intervene proactively with donors whose top-level giving streaks may be coming to an end, and to segment your stewardship efforts by loyalty patterns rather than just by "giving amount". Fundraising directors and frontline gift officers should review this analysis regularly, ideally in portfolio review meetings, to spot opportunities for personalized touches, targeted asks, or timely re-engagement. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. To evaluate the effectiveness of this analysis, track subsequent donor retention rates among top-tier donors, the reactivation of lapsed streaks, and the growth in multi-year high-level giving. Success will be reflected in improved donor retention, increased development of the major gift pipeline, and more meaningful, data-driven stewardship actions.

## QX77 Active Donor Loyalty Summary Analysis by Segment

*This analysis (often used as a report) analyzes the historical loyalty of your donors, segmented by how much they gave in the most recent fiscal year.*

Active Donor Loyalty Summary Analysis by Segment How to use the Active Donor Loyalty Summary Analysis by Segment analysis This analysis provides a concise and strategic view of your active donor base, segmented by giving level, with a focus on donor loyalty and giving consistency. It organizes your most recent fiscal year's active donors into three key tiers-Top, Middle, and Bottom-based on thresholds determined by statistical analysis, using each donor's total giving in the last full fiscal year. Drawing from your gift and constituent records, it automatically excludes deceased donors, ensuring you focus on viable relationships. For each segment, the analysis calculates metrics that reveal not just how much donors give, but how loyal and consistent they've been over time. You gain insights into both the total number of donors in each segment and deeper behavioral metrics, including the average and median years of giving, the average and median streaks of consecutive giving years, and the counts of donors grouped by the length of their longest giving streak. You'll see, for example, how many top-tier donors have given for ten or more consecutive years, versus those who are newer or have less consistent histories. The inclusion of these loyalty streaks is crucial-it helps you spot which segments contain your most steadfast supporters, as well as those at risk of lapsing. This analysis is especially valuable for planning targeted stewardship and retention strategies. You should use it to tailor your outreach, such as recognizing long-term consecutive givers with personalized communications or prioritizing those with shorter streaks for re-engagement efforts. Reviewing this analysis periodically as part of your Constituent Intelligence routines enables you to track shifts in donor loyalty and adapt your engagement plans accordingly. Fundraising directors, stewardship managers, and annual giving officers should review this analysis together. Use the results to set segment-specific retention goals, create recognition societies, and inform upgrade or reactivation campaigns. Success can be measured by improvements in donor retention rates, increases in the proportion of long-term donors, and a greater average number of years of giving across segments over time. By leveraging these insights, you can strengthen donor relationships and drive sustainable fundraising growth.

# 2.1: Outright Lapse Mitigation YOY

## QX3 Lapsing First Time Middle and Top Donors Analysis

*This analysis creates a time-sensitive list of your most valuable new donors who are at immediate risk of becoming one-time supporters.*

Lapsing First Time Middle and Top Donors How to use the Lapsing First Time Middle and Top Donors analysis This analysis identifies individual donors who have made only one gift, specifically those whose single contribution placed them in your middle or top donor segments, but who have not given again within 11 to 15 months. By examining your Gifts and Constituents data and referencing your segmentation thresholds, the analysis spotlights first-time donors at higher giving levels who are now at risk of lapsing. You'll see not just their names, but also the date and amount of their sole gift, their donor type (individual or organization), the giving segment they qualify for, and the number of months since their first and only donation. These supporting columns are valuable for tailoring your outreach, as they provide context for timing, potential gift capacity, and donor profile. The key metric here is identifying those who made a significant initial gift but have not returned, filtered by your organization's own definitions of middle and top donors, ensuring you focus on constituents with the most strategic value. The Months Since Gift calculation pinpoints donors who are within a critical window where a personalized intervention is most likely to be effective, while segmenting by giving level helps you prioritize your stewardship efforts. Strategically, this analysis enables you to target high-potential donors before they fully lapse, supporting more effective re-engagement campaigns and personalized stewardship. Development directors and major gifts officers should review this analysis regularly-ideally as part of your Constituent Intelligence routines-to coordinate timely follow-up and craft messaging that acknowledges the donor s prior impact and invites renewed involvement. For actionable next steps, assign relationship managers or stewardship staff to personally review these donors and develop individualized outreach strategies, such as tailored thank-you calls, invitations to special events, or impact updates referencing their specific gift. You might also use these insights to create segmented reactivation campaigns or to inform board members and volunteers about key lapsed prospects in their networks. To evaluate the impact of using this analysis, track reactivation rates among these donors, measure changes in retention for middle and top first-time givers, and monitor the total revenue recovered from this group over time. These success measures will help demonstrate the value added by targeted Constituent Intelligence and guide ongoing improvements in your donor engagement strategy.

**Collections:** Lapse Prevention Toolkit, New Donor Onboarding Monitor

### QX5 Active Top Donors Fiscal Year to Date vs Last Year Analysis

*This analysis proactively identifies your most important donors from last year and tracks their giving KPI's this year versus last.*

Active Top Donors FYTD vs Last Year How to use the Active Top Donors FYTD vs Last Year analysis This analysis helps you quickly understand how your most important donors, specifically those who gave at the top giving level in the previous fiscal year, are performing so far this fiscal year compared to the same point last year. It draws from your Gifts data, applies custom segmentation thresholds, and focuses on individual donors who exceeded a set top-tier giving amount in the previous fiscal year. For each qualifying donor, it calculates and presents their current year-to-date giving, last year's giving over the same period, total annual giving from the previous fiscal year, and provides both the dollar and percentage change year over year. Additionally, it flags donors experiencing a significant decline of more than 25%, allowing you to prioritize urgent outreach. You'll also see supporting information, such as the donor's name and organization affiliation, which, although not part of the core calculation, is included to help you personalize stewardship and engagement strategies for each donor. By comparing current fiscal year-to-date giving with the same period last year, you can spot both positive trends and potential problems early. The Significant Decline Flag is especially valuable for quickly identifying donors at risk of disengagement, enabling proactive constituent management. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. Development directors, major gifts officers, and anyone overseeing donor relations should review the results frequently. You can use these insights to segment your outreach, prioritize meetings, and craft personalized communications for top donors who are lagging, stable, or growing in their level of support. For example, donors flagged with significant declines may need a tailored stewardship plan or a personal check-in. At the same time, those who have increased giving could be recognized and cultivated for deeper engagement. To evaluate the impact of using this analysis, measure success by tracking donor retention rates among your top tier, the number of at-risk donors successfully re-engaged, and the year-over-year growth in giving from this segment. By integrating this Constituent Intelligence analysis into your fundraising workflow, you can drive more strategic actions and strengthen your most valuable donor relationships.

**Type:** Summary+Detail | Lifecycle: Portfolio Management | Time: Current/Monitoring | Audience: Operational

## 2.3: Within-Segment Growth

## QX21 Average Gift Progression Analysis Top Donors

*This analysis analyzes the long-term, year-over-year gift size trends as they progress to Top Donor status.*

Average Gift Progression Analysis Top Donors How to use the Average Gift Progression Analysis Top Donors -Review Later analysis This analysis provides a year-over-year view of how your organization s top donors giving amounts are changing, focusing specifically on those who meet or exceed your defined "top donor segment" threshold. By aggregating each donor's total giving in your selected fiscal year, you can see not only how much each top donor gives annually, but also how their giving grows, declines, or stays the same from one year to the next. The underlying data comes from your gifts table, where we calculate each constituent's annual giving totals over time and then compare those who qualify as top donors across consecutive years. You can use this analysis to identify trends in donor retention and upgrade rates among your most significant supporters. The key metrics include the change in average gift amount (both in dollars and as a percentage), the number of donors who increased, decreased, or maintained their giving, and the percentage of top donors who increased their giving year over year. These figures reveal not only the health of your major donor pipeline but also help you spot opportunities for timely stewardship or intervention. Strategically, this analysis allows you to understand which fiscal years saw the most significant increases or declines among your top donors, enabling you to time your outreach and stewardship efforts for maximum impact. For example, development directors can use the "Donors Increased" and "Donors Decreased" counts to quickly identify donors who may be at risk of downgrading or lapsing, and to recognize those who are trending upward and may be candidates for special recognition or further engagement. If you supplement this analysis with individual donor details and supporting information (such as contact history or engagement notes), you can craft highly personalized outreach that demonstrates attentive relationship management. You should review this analysis regularly, at a minimum, annually, but it is recommended to be reviewed periodically as part of your Constituent Intelligence routines. Major gift officers, annual fund managers, and those overseeing donor portfolios should utilize these findings to inform their one-to-one donor strategies and shape broader stewardship plans. Consider setting targets to increase the percentage of top donors who grow their giving or to decrease the number who reduce their support year over year. Success should be measured by improvements in average gift progression, higher retention rates among top donors, and increased proactive engagement as indicated by fewer declines and more upgrades in subsequent analysis periods.

**Segments:** Top | Scope: Organization

## QX96 Bottom Segement Upgrade Prospect List Analysis

*This analysis searches for "sleepers" within your bottom donor segment. It pintoints individuals in that segment who have made larger single gifts.*

Bottom Segment Upgrade Prospect List How to use the Bottom Segment Upgrade Prospect List analysis This analysis helps you identify donors in your bottom giving segment who are showing signs of increased engagement and are strong candidates for targeted upgrade strategies. By examining gift data from the last two fiscal years, it surfaces those donors who have made at least one gift in a given fiscal year that meets or exceeds the 75th percentile for the bottom segment, signaling above-average generosity for their group. The analysis leverages your organization's segmentation thresholds to ensure that only those genuinely in the bottom segment are included, and it automatically excludes anyone who had already moved into the middle segment in the previous year, keeping your focus on newly emerging upgrade prospects. You'll see detailed supporting information for each constituent, including their name, the date and amount of their signal gift, total giving for that fiscal year, and which fiscal year the activity occurred. This level of detail enables you to tailor outreach and stewardship plans, knowing not just who gave, but exactly when and how much. It lets you reference recent activity and personalize your approach. The key calculation involves identifying gifts at or above the 75th percentile for bottom-segment donors in each fiscal year. This percentile threshold is important because it highlights donors whose giving behavior is notably stronger than their peers, suggesting they may be receptive to more ambitious asks or deeper engagement. By focusing on these donors, you can prioritize your efforts where the potential for an upgrade is highest. Strategically, you should use this analysis to inform mid-level donor pipeline development and early-stage major gift qualification. It is especially valuable for development officers and annual giving managers responsible for donor retention and growth. Review the analysis regularly—ideally quarterly or as part of your Constituent Intelligence routines —to ensure you're capturing new prospects as giving patterns emerge. Assign specific follow-up actions, such as personalized thank-you calls, invitations to special events, or tailored upgrade solicitations, to the donors highlighted in this analysis. To evaluate the success of using this analysis, track metrics such as the percentage of identified prospects who increase their giving, conversion rates from bottom to middle or higher segments, and overall revenue lift from this cohort. Over time, you should see improved donor retention, higher average gifts, and a more robust mid-level pipeline.

## QX97 Middle Segment Donor Upg Prospect List Analysis

*This analysis identifies a powerful group of upgrade prospects from your Middle donor segment based on larger gifts they have made oin the past.*

Middle Segment Donor Upg Prospect List How to use the Middle Segment Donor Upg Prospect List analysis This analysis identifies donors in your Middle giving segment who, in the last full fiscal year, have made at least one individual gift at or above the typical gift size of your Top segment donors. By leveraging annual gift data, the analysis segments all donors based on their total giving and then highlights Middle segment donors whose single largest gift stands out compared to Top segment benchmarks. It uses percentile thresholds (25th, 50th, and 75th) derived from the Top segment's gift sizes, allowing you to see exactly how Middle donors compare to your highest tier. You can use this analysis to uncover hidden upgrade prospects who may be ready for more focused cultivation and tailored asks. The data includes not only the donor's total giving and their largest gift in the last fiscal year, but also the specific date of that largest gift. For each prospect, you see how their giving measures up to your Top donor benchmarks, providing actionable context for outreach. Additional columns, such as constituent names and whether the donor gives as an individual or through an organization, are included to help you quickly personalize your stewardship strategies. Key metrics in this analysis, like annual total giving, largest single gift, and percentile rank, allow you to prioritize Middle donors who have already demonstrated Top-tier giving potential. These insights are particularly valuable for development officers seeking to build a robust upgrade pipeline and for managers planning mid-level donor programs. You should review this analysis in regular Constituent Intelligence meetings, particularly before major campaign planning or portfolio reviews. Development officers and major gift officers should focus on the donors flagged as exceeding the 25th, 50th, or 75th percentile of Top segment giving, as these individuals have signaled readiness for more significant engagement by making individual gifts of a size that is commensurate with some members of your Top segment. Use the gift date information to time your outreach and reference the largest gift in your conversations to demonstrate thoughtful stewardship. To measure success, track the number of identified prospects who move into higher segments, the rate of upgrade solicitations accepted, and the overall growth in Middle-to-Top segment transitions. Over time, you should see increased retention and giving among this cohort, validating the strategic use of this Constituent Intelligence tool.

## QX97 Middle Segment Donor Upgrade Prospect List Analysis

*This analysis (often delivered as a report) proactively identifies your most promising upgrade candidates from your mid-level donor pool.*

Middle Segment Donor Upgrade Prospect List How to use the Middle Segment Donor Upgrade Prospect List analysis This analysis identifies middle-segment donors who have recently demonstrated giving behavior that signals high upgrade potential. By analyzing each donor's total contributions over the past two fiscal years and comparing individual gifts to both the overall giving patterns and established segment thresholds, it pinpoints those donors whose latest gifts place them at the top end of the middle donor range, approaching the minimum threshold for your top donor segment. You can use this analysis to reveal which constituents are not only consistently giving at a strong level, but who have also made a single gift at or above the 75th percentile for middle segment donors in the most recent fiscal years. The analysis highlights donors whose 75th percentile gifts are within $500 of your organization's top donor threshold, drawing attention to donors who may be ready for more personalized engagement or a leadership annual gift ask. Supporting information, such as total giving for the fiscal year, donor name, and the date and amount of their upgrade signal gift, is included to help you craft tailored outreach and stewardship strategies. The key calculations in effect are the annual total giving per donor, the percentile ranking of individual gifts within segment benchmarks, and checks against dynamic thresholds for donor segments. These metrics matter because they enable you to distinguish between routine giving and breakthrough gifts, which suggest that a donor may be ready for deeper involvement or a larger commitment. Strategically, this analysis enables you to prioritize your outreach efforts effectively. You should focus attention on donors who have the capacity and demonstrated intent to increase their support. Reviewing this list as part of your Constituent Intelligence routines ensures you act promptly on emerging upgrade signals to strengthen relationships and maximize revenue opportunities. It is recommended that both frontline fundraisers and development directors review this analysis regularly, using it to identify prospects for upgrade campaigns, personalized stewardship, or targeted cultivation by leadership. For each highlighted donor, research recent interactions and consider a more personalized approach-such as a thank you call, a tailored ask, or an invitation to an insider event. You can measure the success of using this analysis by tracking the number of middle segment donors who increase their giving into the top segment, improvements in donor engagement rates, and the overall lift in revenue generated from these upgrade prospects over time.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective | Audience: Operational
**Segments:** Middle | Scope: Segment, Individual Donor

→ See Summary: QX98 Donor Tier Upgrade Pathways Summary

## QX99 Bottom Donor Upg Prospect List Analysis

*This analysis (often delivered as a report) identifies your strongest upgrade candidates from your low-dollar donor segment.*

Bottom Donor Upg Prospect List How to use the Bottom Donor Upg Prospect List analysis This analysis is designed to help you identify donors who are currently classified in your bottom giving segment but have shown potential to give at levels comparable to those of your middle segment donors. It does this by examining each donor s largest individual gift in the last full fiscal year and comparing it to the typical gift sizes made by donors in your middle segment, based on actual percentile benchmarks. The analysis pulls from your Gifts and Constituents data, referencing segmentation thresholds and calculating where each donor s largest gift falls relative to middle-tier percentiles (25th, 50th, and 75th). You receive a list of individual donors who, although their total annual gifts remain modest, have already demonstrated the capacity for higher giving through a single, larger-than-usual donation. For each donor, you see their total giving last year, the amount and date of their largest gift, and a percentile indicator showing how their top gift compares to the middle segment. The inclusion of donor and organization names (as available) allows you to quickly personalize your outreach and reference previous engagement, making your next steps more targeted. Pay particular attention to the percentile columns: if a bottom-segment donor's largest gift meets or exceeds the 25th, 50th, or even 75th percentile of middle-segment donors, it signals that they might be ready for an upgrade conversation or more tailored cultivation. This is critical for Constituent Intelligence, as it enables you to move beyond static segmentation and identify real-time signals of donor readiness. You should review this analysis as part of your regular Constituent Intelligence routines, ideally at the close of each fiscal quarter. Major gift officers, annual fund managers, and donor stewardship teams can use it to identify prospects for upgrade appeals, special project invitations, or personalized stewardship. For actionable next steps, you should: (1) flag these donors for targeted upgrade campaigns, (2) assign them for personalized outreach by development officers, and (3) review their engagement history to craft highly relevant messages. To measure success, track the number of bottom-segment donors who move up to the middle segment over time, monitor response rates to upgrade campaigns, and compare the average gift amounts of targeted versus untargeted donors in subsequent periods. Ultimately, this analysis enables you to focus your efforts on donors with untapped capacity, thereby improving both fundraising outcomes and donor relationships.

## QX108 High Lift Donors DEC Last Fiscal Year Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to December fundraising results last year.*

High Lift Donors DEC LFY How to use the High Lift Donors DEC LFY analysis This analysis identifies donors who made gifts in December of the last full fiscal year that exceeded their own average December giving over the previous three years. Using your giving data, it compares each donor's most recent December performance to their typical December support, highlighting those individuals whose giving has meaningfully increased-these are your high-lift donors. The analysis draws on all gift records, calculates three-year baselines for each donor, and isolates those who surpassed their own historical benchmarks in December. It surfaces not only the incremental dollar lift but also supporting details such as the donor's name and constituent ID, which allows you to personalize your outreach quickly. The core metric, Personal Incremental Lift ($), measures the difference between a donor's actual December giving in the last fiscal year and their own three-year average for December. This approach highlights genuine accelerations in donor engagement, rather than focusing solely on large gifts or single-year performance. By filtering for donors who are not marked as deceased and who gave more than their average, you ensure the analysis focuses on living donors, showing positive movement. You can use this analysis to guide strategic stewardship and cultivation efforts. For example, prioritize high-lift donors for thank-you calls, personal notes, or invitations to special events, as their increased support signals a deepening commitment. The inclusion of donor names and IDs facilitates tailored outreach, as development officers can reference specific giving patterns or acknowledge year-over-year growth in communications, thereby strengthening the donor relationship. Reviewing this analysis regularly, especially as part of your Constituent Intelligence routines, ensures you don't miss emerging major gift prospects or significant shifts in donor loyalty. Fundraising directors and gift officers should review this analysis shortly after each December close and before major stewardship pushes. Use the insights to segment high lift donors for personalized recognition or to identify candidates for upgrade strategies and leadership giving programs. Success can be measured by tracking follow-up actions taken for these donors, as well as subsequent retention and upgrade rates, and the overall growth in the high-lift cohort year over year. By focusing on these metrics, you can effectively leverage Constituent Intelligence to drive increased giving and deepen donor engagement.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX110 High Lift Donors Last Fiscal Year NOV Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to November fundraising results last year.*

High Lift Donors LFY NOV How to use the High Lift Donors LFY NOV analysis This analysis identifies donors who have significantly increased their giving in November of the last full fiscal year compared to their personal average for the same month across the prior three years. By focusing on this target month and measuring each donor's unique giving lift, you can pinpoint individuals who are exhibiting strong upward trends—your high lift donors—who may be primed for deeper engagement or recognition. The analysis uses your Gifts and Constituents data, examining each donor's giving in November over four years. It calculates the donor's average November giving for the three fiscal years before last year (establishing a personal baseline), then compares that to their actual giving in November of the previous fiscal year. Only donors whose most recent November giving exceeded their baseline are included, ensuring you focus on those with genuine, positive momentum. Key columns include not only the lift calculation, but also each donor s baseline average and actual giving in the latest November.  These details support a more personalized approach-for example, referencing a donor's consistent loyalty or recent surge in giving during stewardship or cultivation outreach. The primary metric, Personal Incremental Lift ($),  helps you move beyond generic segmentation. Rather than just looking at total giving or year-over-year change, you can identify and prioritize donors whose behavior signals a new level of commitment. This is especially valuable for year-end strategies, leadership gift prospects, and stewardship planning. You should assign this analysis to development officers for portfolio review, as well as to annual giving or stewardship teams who are planning touchpoints for the fiscal year. Use the outputs to trigger timely thank-you calls, targeted upgrade asks, or special recognition for donors whose support is accelerating. For major gifts officers, these donors may warrant qualification for deeper relationship building. Success can be measured by tracking subsequent retention and upgrade rates among high-lift donors, as well as by monitoring response rates to personalized outreach efforts that reference their recent giving lift. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you consistently capture and respond to emerging donor trends.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX111 High Lift Donors Last Fiscal Year OCT Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to October fundraising results last year.*

High Lift Donors LFY OCT How to use the High Lift Donors LFY OCT analysis This analysis identifies donors who significantly increased their giving in October of the most recently completed fiscal year compared to their average giving for that month over the previous three years. Drawing from your Gifts and Constituents data, the analysis calculates a personal three-year baseline for each donor's October giving, then measures the actual giving in October of the last full fiscal year. Donors are included only if their recent October giving exceeds their historic October average, highlighting individuals who have shown a clear positive lift in engagement. You ll see each donor s name, the average amount they gave in October for the past three years, their most recent October giving, the calculated incremental lift in dollars, and their Constituent ID. These additional details, such as donor or organizational name and unique identifiers, help you tailor your outreach and ensure personalized follow-up, which is key to deepening relationships. At the heart of this analysis is the Personal Incremental Lift metric, which shows the dollar increase for each donor above their own historical average for October. By focusing on month-specific giving patterns, you can identify emerging trends and pinpoint which donors are responding to new campaigns, messaging, or external factors. This is particularly valuable for fundraising planning, as it helps you recognize and respond to donors who may be primed for further engagement or stewardship. Development officers and fundraising managers should review this analysis, especially during strategic planning cycles and campaign follow-ups. Major gifts teams can use it to identify candidates for targeted cultivation, while annual giving staff might leverage it to acknowledge and reinforce positive behavioral changes. Scheduling note: This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure timely recognition of high-lift donors. To measure the impact of incorporating this analysis, track subsequent retention and upgrade rates among highlighted donors, monitor the effectiveness of personalized follow-up, and assess whether these donors continue to outperform their baselines in future cycles. By integrating this analysis into your donor intelligence workflow, you can make more informed decisions, strengthen relationships, and drive sustainable fundraising growth.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX112 High Lift Donors Last Fiscal Year SEP Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to September fundraising results last year.*

High Lift Donors LFY SEPTEMBER How to use the High Lift Donors LFY SEP analysis This analysis identifies donors who have shown a significant increase in giving during a specific month, September, in this case, compared to their own prior three-year average for that month. It compares each donor's giving in the target month of the last completed fiscal year to their average giving in that month across the previous three years, highlighting those with a positive personal incremental lift. The analysis uses detailed gift data, examining both the timing and amounts of donations, and incorporates constituent records to present the donor's name and status. By surfacing only those who exceeded their personal historical average, it allows you to focus on individuals demonstrating recent, meaningful engagement or capacity shifts. For each donor listed, you see their average giving in September over the prior three years, their actual giving in September of the last fiscal year, and the calculated lift amount. This personal, year-over-year benchmarking is critical, as it helps you identify not only your largest donors but also those whose behavior signals increased affinity or changing circumstances. The inclusion of constituent names and IDs provides additional context for segmentation, stewardship planning, and personal outreach, enabling you to match giving patterns with known relationships or organizational priorities quickly. You should use this analysis to guide stewardship and cultivation strategies. Development officers and major gift officers should review it regularly—ideally, monthly or quarterly —as part of their Constituent Intelligence routines. Prioritize high-lift donors for personal thanks, special updates, or tailored engagement, as their increased giving may indicate readiness for deeper involvement or a new campaign ask. Donor relations and annual giving teams can utilize these insights to refine their segmentation for appeals, events, or recognition programs. To apply the findings, assign follow-up actions to relationship managers for the top lift donors, and incorporate their giving stories into board or campaign briefings. Evaluate success by tracking follow-up engagement rates, subsequent retention, and whether high-lift donors continue their momentum in future cycles. Ultimately, using this analysis should help you identify emerging leaders in your donor base, strengthen relationships, and drive more effective, personalized fundraising strategies.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX113 High Lift Donors Last Fiscal Year JUL Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to July fundraising results last year.*

High Lift Donors LFY JUL How to use the High Lift Donors LFY JUL analysis This analysis identifies donors who significantly increased their giving in July of the last full fiscal year compared to their typical giving in July over the prior three years. It examines transaction data from your Gifts file, focusing specifically on giving behavior in the target month (July), and calculates a personalized baseline by averaging each donor's July giving from the three preceding fiscal years. Using this personalized baseline, the analysis then highlights donors whose July giving in the most recent fiscal year exceeded their own historical average, quantifying the size of that increase as "Personal Incremental Lift ($)." You will see donor names, their average giving in July for the prior three years, their actual giving in July of the last fiscal year, and the calculated lift amount. The inclusion of donor names and IDs enables you to quickly look up detailed constituent records or segment these high-performing donors for further review and analysis.  The core metric, "Personal Incremental Lift ($)," enables you to pinpoint which donors are not just giving more, but are making a significant step up compared to their own norm, an essential distinction for Constituent Intelligence that moves beyond simple year-over-year comparisons. This type of analysis enhances your ability to recognize and celebrate donors who are increasing their commitment, rather than focusing solely on top-dollar gifts or overall giving trends. Use this analysis to inform targeted stewardship and engagement strategies. Consider having your development officers and major gift officers review this set of high-lift donors shortly after each July close. Personalized outreach, such as a thank-you call referencing their increased support, or an invitation to an exclusive update, can reinforce positive behavior and build deeper relationships. Additionally, you should share the findings with your annual giving or stewardship teams to ensure that these donors are recognized in your Constituent Intelligence dashboards and cultivation pipelines. To measure the impact of using this analysis, track subsequent retention rates, further increases in giving, and donor engagement among those identified as high-lift donors. Over time, you should see improved donor loyalty and more donors moving into higher giving brackets as a result of tailored follow-up and acknowledgment. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to maximize its strategic value.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational

**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX114 High Lift Donors Last Fiscal Year JUN Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to June fundraising results last year.*

High Lift Donors LFY JUL How to use the High Lift Donors LFY JUN analysis This analysis identifies donors who made a significant increase in their giving during the target month of June in the most recent fully completed fiscal year, compared to their own three-year historical average for that same month. It uses your gift transaction history to compare each donor's giving in June of the last fiscal year with their average June giving over the prior three years. The analysis highlights those donors who not only gave in June this past year but have also exceeded their typical giving for that month, showing their personal incremental lift in dollars. You will see each donor's name (or organization name), their unique Constituent ID, their average June giving for the past three years, their actual June giving for the last fiscal year, and the calculated Personal Incremental Lift  amount. This supporting information lets you quickly identify who is outpacing their own historical pattern, providing valuable context for crafting tailored outreach and stewardship strategies. Having the constituent's name and ID together also helps you cross-reference donor records or coordinate with your prospect research team. The core metric, the Personal Incremental Lift, shows you exactly how much more each highlighted donor gave in June this past year compared to their own personal baseline. This matters because it pinpoints donors who are most responsive, motivated, or potentially ready for deeper engagement or increased ask amounts, rather than just those with the largest single gifts. Strategically, you can use this analysis to prioritize donors for personalized follow-up, stewardship calls, or targeted upgrade strategies. It is beneficial for development officers, annual fund managers, and donor relations staff who want to recognize and deepen relationships with donors, showing increased commitment. Reviewing this analysis enables you to spot new upgrade candidates, identify emerging major gift prospects, and tailor your messaging to reflect donors' recent momentum. You should review this analysis as part of your Constituent Intelligence routines, ideally after each fiscal year closes and before planning summer stewardship or solicitation cycles. Fundraising directors can use it to assign portfolios or set upgrade targets, while gift officers should use the incremental lift data to personalize outreach and acknowledge donors' increased generosity. To measure the success of using this analysis, track the percentage of high-lift donors who receive tailored stewardship, and monitor subsequent retention and upgrade rates within this group in subsequent years. Improvements in these metrics will demonstrate the impact of your enhanced Constituent Intelligence approach.

**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX115 High Lift Donors Last Fiscal Year MAY Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to May fundraising results last year.*

High Lift Donors LFY MAY How to use the High Lift Donors LFY MAY analysis This analysis identifies donors who made significantly larger gifts in the target month of the last completed fiscal year (in this case, May) compared to their own three-year average giving in that same month. By examining each donor s giving pattern, it highlights only those who demonstrated a true personal lift-meaning their recent support outpaced their historical average for that time period. The data draws from your Gifts and Constituents tables, ensuring that only living donors are considered. For each donor, you see several key pieces of information: their name, average gift amount in the target month over the prior three fiscal years, actual giving in the target month of the last fiscal year, and the calculated Personal Incremental Lift. This last figure is crucial-it quantifies, in dollars, how much more a donor gave this year compared to their own recent pattern. This allows you to move past generic year-over-year comparisons and instead focus on donors whose increased giving is meaningful for them as individuals. You should use this analysis to recognize and steward high-potential donors who may be responding to recent engagement or shifting their philanthropic priorities. The inclusion of donor names and IDs, along with organization names where relevant, supports you in crafting personalized outreach. These details enable a development officer to acknowledge not just the gift, but the donor's personal journey, making communications more relevant and meaningful. Development directors, gift officers, and annual giving managers should all review this analysis, especially during campaign planning or stewardship cycles. Use it to segment and prioritize outreach-consider reaching out to these high-lift donors with calls, thank-you notes, or tailored updates about the impact of their giving. Share key findings in team meetings to inform cultivation strategies and recognize staff efforts. To measure the success of leveraging this analysis, track whether these donors continue to show elevated engagement in subsequent cycles, monitor retention rates, and assess whether personalized outreach leads to further increases in giving. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you continue to identify and celebrate donors whose commitment is growing year over year.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Last Fiscal Year) (month variants)

## QX116 High Lift Donors Last Fiscal Year APR Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to April fundraising results last year.*

High Lift Donors LFY APR How to use the High Lift Donors LFY APR analysis This analysis helps you identify individual donors who have significantly increased their giving in a specific month (the "target month," such as April) during the last full fiscal year compared to their own personal average for the same month across the previous three fiscal years. By focusing on this "personal incremental lift," you can pinpoint donors who are deepening their commitment and may be receptive to further engagement or stewardship. The analysis draws on gift data, constituent profiles, and fiscal year calculations aligned with your organization's financial calendar. For each donor, you see their average giving in the target month over the past three years, their actual giving in that month for the last fiscal year, and the exact dollar lift above their personal baseline. These metrics matter because they highlight not just who gave more, but who is showing a meaningful change in behavior, key for prioritizing outreach. The inclusion of the donor s name (or organization name) and Constituent ID alongside giving statistics supports a personalized approach, allowing you to tailor your communication and recognize the donor s specific contribution pattern. Strategically, you should use this analysis to identify and segment high-potential donors who have recently increased their support. By understanding who is demonstrating increased engagement, you can target proactive stewardship, timely thank-you calls, or invitations to special events. Fundraising directors and development officers should review this analysis, ideally on a weekly basis during the month and after the close of each fiscal year, to inform donor engagement strategies and annual planning. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. You can apply the insights by assigning relationship managers to follow up with top lift donors, customizing appeals that reference their increased support, or flagging these donors for leadership attention. Success can be measured by tracking subsequent retention rates, further lift in giving, and responsiveness to personalized stewardship efforts among those identified through this analysis. By leveraging these insights, you can enhance your major giving pipeline and build stronger, data-driven relationships with your most responsive donors.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational

## QX117 High Lift Donors Last Fiscal Year MAR Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to March fundraising results last year.*

High Lift Donors LFY MAR How to use the High Lift Donors LFY MAR analysis This analysis identifies donors who have significantly increased their giving in a specific month during the last full fiscal year compared to their own historical average for that same month. It uses data from your Gifts records, focusing on March of the last full fiscal year, and compares each donor's giving in that month to the same month in the previous three fiscal years. By doing so, it reveals which donors have demonstrated a personal incremental lift, meaning they gave more than their usual pattern for that month, not just more than other donors or an overall average. You ll see each donor s name, their average giving for the target month across the previous three years, their latest giving for that month, and the calculated lift amount. The inclusion of donor identity and organization fields means you can quickly recognize whether the donor is an individual or an organization, which supports a more personalized cultivation strategy. The analysis also displays each donor's Constituent ID, allowing you to cross-reference with other Constituent Intelligence data or to coordinate outreach. The key metric here is Personal Incremental Lift ($), representing the difference between a donor's recent giving and their own baseline. This is crucial because it highlights donors whose engagement has meaningfully increased, rather than just those who give large amounts. Understanding who is expanding their support allows you to prioritize stewardship, thank-you calls, or targeted engagement efforts, recognizing and encouraging this positive trend. You should review this analysis regularly-ideally, monthly-as part of your Constituent Intelligence routines. Major gift officers, annual fund managers, and donor engagement teams should focus on the list of high-lift donors to identify those meriting special recognition or deeper cultivation. Use the insights to tailor outreach, reference their increased commitment, and explore the motivations behind their higher giving. Additionally, consider including board members in stewardship for these donors, fostering a culture of recognition. Success can be measured by tracking the retention rate and subsequent giving levels of high-lift donors after targeted engagement, as well as the number of donors who sustain or further increase their giving in future analyses. Over time, you should expect improved donor loyalty and an increase in identified upgrade opportunities, directly tied to your use of this analysis.

## QX118 High Lift Donors Last Fiscal Year FEB Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to February fundraising results last year.*

High Lift Donors LFY FEB How to use the High Lift Donors LFY FEB analysis This analysis identifies individual donors who showed a significant increase or lift in their giving during the target month of the last full fiscal year (specifically February, as defined in this setup), compared to their average giving in that same month across the prior three years. By focusing on month-specific behavior, you gain a granular view of donors who are not just repeating their annual pattern but are actively increasing their commitment during a key period. The data utilized includes detailed gift records by constituent, gift dates and amounts, and constituent status (such as whether the donor is deceased), as well as donor names and organization affiliations. The core calculation compares each donor's average giving in February over the previous three fiscal years (establishing a personalized historical baseline) to their actual giving in February of the most recently completed fiscal year. The difference—the personal incremental lift— highlights donors who have gone above and beyond their own norm, not just the average donor trend. The analysis only includes living donors whose giving in the target month exceeded their own historical baseline, ensuring your focus is on real, positive behavioral shifts. You can use this analysis to quickly pinpoint and prioritize donors who warrant special attention due to their heightened engagement. Supporting information such as the donor s full name or organization is included for each entry, equipping you with context for more tailored, relationship-driven outreach. For example, knowing if a donor is an individual or represents an organization can help you personalize follow-up communications and stewardship efforts. Fundraising directors, development officers, and donor relations staff should regularly review this analysis—ideally as part of your Constituent Intelligence routines —to identify and recognize donors showing fresh momentum. Reach out promptly to acknowledge their increased generosity, explore their motivations, and offer engagement opportunities that match their new level of commitment. Incorporate these insights into your stewardship plans, segmenting and customizing your approach for these high-lift donors. To measure success, track subsequent retention rates, further lift in giving, and qualitative feedback from donor interactions following targeted outreach. Over time, you should see higher renewal and upgrade rates among the high-lift segment, as well as stronger donor relationships borne out of timely, informed engagement.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Retrospective (LFY) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor

### QX119 High Lift Donors Last Fiscal Year JAN Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to JAN fundraising results last year.*

High Lift Donors LFY JUL How to use the High Lift Donors LFY JAN analysis This analysis identifies donors who made significantly larger gifts in January of the last full fiscal year compared to their own average giving in January over the prior three years. By focusing on the January period, you can identify donors who showed notable growth or an increase in their giving during that month, allowing you to recognize and engage those whose recent behavior signals an increased commitment or capacity. The analysis draws from your Gifts and Constituents data, calculating, for each constituent, their average January giving over the past three relevant years and comparing it to their January giving in the most recently completed fiscal year. Only those who exceeded their own baseline are included, ensuring your attention is on donors who demonstrated real, individualized growth. You'll find each donor's name, their unique constituent ID, their three-year January baseline average, the amount given in January of the last fiscal year, and the calculated Personal Incremental Lift- the additional dollars given above their own historic average. Supporting columns, such as donor names and organizational affiliations, offer context for tailoring your outreach; for example, recognizing a corporate donor versus an individual can shape your acknowledgment strategy. If a donor is also flagged as not deceased, you can be confident your engagement will reach the right audience. These metrics empower you to prioritize stewardship and solicitation strategies. By focusing on donors with the largest positive lift, you can identify emerging major gift prospects, develop highly personalized stewardship plans, and craft communications that reference the donor s increased support-strengthening the relationship and encouraging continued growth. You should review this analysis as part of your monthly or quarterly Constituent Intelligence routines, especially at the start of calendar and fiscal years when giving patterns may shift. Fundraising leadership, annual giving managers, and donor relations staff should review this analysis together. Use the insights to prioritize personal calls or tailored thank-you notes, flagging high-lift donors for further cultivation, and sharing stories of impact that resonate with their demonstrated increased interest. Consider reaching out to donors who have made their first significant increase to learn what motivated their gift and deepen their connection. Measure success by tracking retention and further lift among these donors in subsequent months, monitoring whether personalized outreach leads to higher renewal rates or additional upgrades. You should also evaluate whether this targeted approach helps uncover new major gift or planned giving prospects, ultimately strengthening your overall fundraising pipeline.

## 2.4: Upward Segment Migration

## QX17 Segment Graduation Rates Analysis

*This analysis (often used as a report) tracks donor movement between giving segments, measures graduation rates, retention, and lapse patterns.*

Segment Graduation Rates How to use the Segment Graduation Rates analysis This analysis provides a clear, year-over-year view of how your donors transition between giving segments—Top, Middle, and Bottom—based on their total annual giving, using your organization's own customizable thresholds. By examining the gift history of each constituent over the past six fiscal years (adjusted to your fiscal calendar), it identifies whether a donor has upgraded to a higher segment, maintained their giving level, downgraded, or lapsed entirely in the following year. The analysis draws on your Gifts and Constituents data, focusing on recent, relevant giving histories. You gain actionable insights into donor migration patterns, revealing which segments are most stable, where upgrades or downgrades are most likely to occur, and which segments face the greatest risk of attrition. The analysis summarizes these transitions with clear metrics: total number of donors in each starting segment, and the rates of upgrade, retention, downgrade, and lapse. These rates are particularly valuable for targeting stewardship efforts and evaluating the effectiveness of your donor engagement strategies. For example, a high lapse rate among Middle donors may signal the need for more personalized outreach, while a strong upgrade rate in Bottom donors could help you refine your annual fund appeals or mid-level pipeline cultivation. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, especially by fundraising directors, development officers, and anyone responsible for donor stewardship or segmentation strategy. You should use these insights to prioritize outreach to donors at risk of downgrading or lapsing, tailor your communications to celebrate upgrades and maintainers, and evaluate the impact of specific stewardship or solicitation initiatives on segment movement. To measure success, track improvements in upgrade and retention rates within each segment over time, reductions in lapse rates, and the movement of donors into higher-value segments. Ultimately, incorporating this analysis into your Constituent Intelligence process will help you focus resources where they can have the greatest impact and build a stronger, more loyal donor base.

## QX25 Middle to Top Donor Pathway Analysis

*This analysis analyzes the long-term effectiveness of your mid-level program as a pipeline for producing future major donors.*

Middle to Top Donor Pathway How to use the Middle to Top Donor Pathway analysis This analysis helps you understand how your middle-tier donors progress to become top donors over time, providing actionable insights into your donor pipeline and upgrade strategies. It draws on your historic gift data, classifying each donor's annual giving by fiscal year and segmenting them into Basic, Middle, or Top tiers based on thresholds you define in your Thresholds table. By tracking how long it takes for a middle donor to become a top donor, along with the frequency and amount of their giving, you gain a clear picture of upgrade pathways within your constituent base. You will see core metrics, including the total number of middle-tier donors upgraded in each fiscal year, the overall pool of middle-tier donors, and the percentage of middle-tier donors who upgraded. The analysis also highlights the average years it takes for an upgrade, giving you insight into the typical donor journey. Additional metrics, such as average starting and upgrade amounts, average giving frequency, and the proportion of frequent givers who upgrade, help identify characteristics associated with successful transitions. For instance, knowing how many donors upgrade within the very next year or within three years allows you to tailor engagement timing and stewardship efforts more precisely. This analysis is particularly valuable for development officers and directors responsible for growing major gift pipelines and enhancing donor retention. By reviewing this as part of your regular Constituent Intelligence routines, you can identify which years or donor segments are most responsive to upgrade strategies, and where additional cultivation might yield the highest returns. Fundraisers should examine the characteristics of those who have moved up quickly or given frequently, and use that information to prioritize outreach, personalize stewardship messages, and design targeted campaigns. Major gift officers should use the insights to select middle donors for proactive cultivation, focusing on those who resemble past successful upgrades. To measure success, track the increase in upgrade percentages over time, the reduction in average years to upgrade, and the growth in average upgrade amounts. You should also monitor the responsiveness of frequent givers to tailored outreach, as indicated by the Pct Frequent Givers ■ measure. Ultimately, use this analysis to inform your moves management processes and to drive strategic, data-informed decisions that strengthen your donor pipeline and deepen relationships.

## QX68 All Donor Recaptures (10yr) - most recent recapture event only Analysis

*This analysis identifies the donors who, after lapsing for more than a year, made a comeback gift within the last 10 fiscal years.*

All Donor Recaptures (10yr) - most recent recapture event only How to use the All Donor Recaptures (10yr) - most recent recapture event only analysis This analysis identifies every donor your organization has successfully recaptured in the last ten fiscal years, focusing on their most recent instance of returning after a lapse of at least one year without giving. It draws from your constituent, gift, and segmentation data to surface patterns in donor lapses and recoveries, highlighting each donor's giving level before they lapsed, their giving level at the moment of recapture, the duration of their inactivity, and their most recent fiscal year status. By leveraging Constituent Intelligence, you gain precise visibility into which lapsed donors have been re-engaged, enabling you to understand their giving journeys better. You will see each donor s name, the fiscal years relevant to their lapse and recapture, their giving totals and segment (Top, Middle, or Bottom) before and after recapture, and how many months they were lapsed. The analysis also includes supporting information-such as the donor s most recent gift year and their giving status in the latest fully closed fiscal year-which, while not core to the recapture calculation, can help you craft more personalized outreach and stewardship plans. For instance, you can readily spot if a recaptured donor has since lapsed again, or if their giving level has increased, decreased, or stayed steady since reactivation. Key metrics calculated include the months lapsed between gifts, the giving levels before and after recapture (based on your organization's thresholds), and the timing of the most recent gifts. These insights matter because they reveal not just who you have recaptured, but how donor behavior changes across their lifecycle, helping you refine strategies for lapsed donor campaigns, stewardship, and upgrade efforts. You should have your constituent engagement, annual giving, and stewardship teams review this analysis regularly-ideally as part of your Constituent Intelligence routines. Use the findings to prioritize outreach to recently recaptured donors, especially those whose giving levels dropped or who may be at risk of lapsing again. Consider tailoring stewardship efforts to acknowledge their return and reinforce their renewed relationship with your organization. Development officers can leverage the lapsed and recapture history to personalize communications, focusing on donors who demonstrated resilience or upward giving trends after being recaptured. Measure success by tracking retention among recaptured donors, increases in their giving levels post-recapture, and a reduction in the length of lapsed periods over time. Ultimately, this analysis empowers you to make more informed decisions about donor engagement, helping you increase lifetime value and strengthen donor loyalty.

**Type:** Summary+Detail | Lifecycle: Lapse Prevention, Recovery | Time: Retrospective (Multi-Year) | Audience: Operational

## QX69 All Donor Recaptures (10yr) - All recapture events Analysis

*This analysis provides a detailed, chronological journey for every donor who has given within the last 10 fiscal years.*

All Donor Recaptures (10yr) - All recapture events How to use the All Donor Recaptures (10yr) - All recapture events analysis This analysis identifies every instance in the past ten years where a lapsed donor has been successfully recaptured, meaning they resumed giving after a gap of more than one year. Drawing on your full gift history and segmentation thresholds, it highlights detailed recapture events for each constituent. You'll see not only which donors returned after a lapse, but also precisely when they lapsed, how long they were away (in months), and how their annual giving levels changed before and after recapture. This analytic identifies all recapture events. Over a ten-year analysis period, a single donor may lapse and be recaptured more than once. Donors who have been recaptured multiple times may not have been properly stewarded to ensure annual giving consistency. The analysis incorporates both individual and organizational donors, automatically pulling the appropriate name and tracking their giving across fiscal years using your organization's segmentation tiers (Top, Middle, Bottom), so you can quickly see at what giving level the donor was before lapsing, upon their return, and in the most recent completed fiscal year. This set of analyses provides a rich context for each recaptured donor, including columns with their donor name, sequence of recapture (if they returned more than once), fiscal years involved, and the latest giving status. These additional details are not part of the core calculation but are essential for development officers to personalize stewardship and re-engagement strategies. For example, knowing whether a donor returned at a higher or lower giving level, or if their most recent engagement signals a renewed or lapsed status, allows you to tailor your approach. Use this analysis to identify patterns in recapture, such as which segments are most likely to be recaptured, typical lapse durations, and the effectiveness of your past outreach efforts. Fundraising leadership, annual giving managers, and donor relations staff should review this regularly, especially those responsible for reactivating lapsed donors and providing stewardship. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you stay proactive in re-engaging valuable donors. To maximize impact, assign specific follow-up tasks to portfolio managers for donors who exhibit multiple recaptures or have returned at higher giving levels. Use the months lapsed metric to test new timing for reactivation campaigns, and leverage giving level changes to craft personalized messaging that recognizes renewed commitment. Measure the success of this analysis by tracking increases in recapture rates, upgrades in giving following targeted outreach, and improvements in the speed at which lapsed donors return. Ultimately, integrating these insights into your strategy will help you build stronger, more resilient donor relationships and optimize your fundraising outcomes.

## QX98 Donor Tier Upgrade Pathways Summary Analysis

*What are the data-driven gift size benchmarks (25th, 50th, 75th percentile) for our Top, Middle, and Bottom donor segments, and the number of donors each.*

Donor Tier Upgrade Pathways Summary How to use the Donor Tier Upgrade Pathways Summary analysis This analysis gives you a high-level view of where your donors stand within your current giving tiers, typically labeled as Top, Middle, and Bottom, based on their total giving in the most recent full fiscal year. By analyzing all gifts from donors during that time, it segments donors according to thresholds you've set, then examines the size and frequency of their individual gifts. The central insight you gain is the identification of donors in lower tiers who are already making gifts comparable to those in higher segments, highlighting strong upgrade opportunities. The core of the analysis calculates key percentile benchmarks for each donor segment: the 25th, 50th (median), and 75th percentile gift amounts. It then identifies how many donors in each segment are making gifts at or above the median and top quartile for their tier. This allows you to spot Middle and Bottom tier donors whose giving behavior resembles that of higher-level supporters. You can also view the total number of gifts per segment, which helps you gauge engagement and identify trends in donor behavior. You can use this analysis to prioritize outreach and stewardship. For example, if you notice a significant group of Middle segment donors making gifts above the 75th percentile for their tier, consider targeting them for personalized upgrade campaigns or enhanced recognition.  Development directors, annual giving managers, and major gift officers should review this analysis as part of regular Constituent Intelligence routines-ideally after each fiscal quarter or fundraising campaign. Use the insights to select upgrade candidates and tailor your touchpoints. For actionable steps: assign staff to connect with donors flagged in the upper percentile ranges, test targeted upgrade asks, and monitor their response to personalized engagement. To measure success, track the rate of donor upgrades by segment, the lift in total giving among prioritized donors, and retention rates of those who received targeted outreach. Over time, you should see increases in the number of donors moving into higher segments, along with improved donor loyalty and lifetime value.

### QX138 Middle and Bottom Donors Proximity to Upgrade Analysis

*This analysis (often delivered as a report) creates a highly actionable list of the most promising upgrade candidates from your Middle and Bottom segments.*

Middle and Bottom Donors Proximity to Upgrade How to use the Middle and Bottom Donors Proximity to Upgrade analysis This analysis helps you identify donors currently in the middle and bottom giving tiers who are closest to moving up to the next segment, based on their giving in the last full fiscal year. It draws on your gift transactions, donor records, and defined giving thresholds to calculate each donor's total giving last year, classify them into segments, and determine how much more they would need to give to reach the higher tier. By focusing on these donors, you can strategically target those with the greatest potential for an upgrade, helping you prioritize engagement and maximize fundraising growth. You'll see, for each donor, their current segment (middle or bottom), last fiscal year's total giving, and a calculated Proximity to Upgrade ($)figure. This number indicates precisely how much additional giving is required for the donor to qualify for the next tier—either from the bottom to the middle or from the middle to the top. Supporting information includes the donor's name, the date and amount of their most recent gift, and their constituent ID. This additional detail enables you to personalize outreach, referencing recent gifts and tailoring communications to each donor's giving pattern. The Proximity to Upgrade metric is central: it flags donors who are just below your key thresholds, so you can design tailored appeals—such as targeted asks, challenge matches, or upgrade campaigns —to help them reach the next level. Reviewing the most recent gift information lets you time your outreach more effectively, for example, by following up soon after a significant gift or on a giving anniversary. You can use this analysis to develop upgrade strategies, inform stewardship plans, and brief frontline fundraisers for more effective conversations. You should schedule periodic reviews of this analysis as part of your Constituent Intelligence routines. Fundraising directors, major gifts officers, and annual fund managers will benefit from using these insights to identify upgrade-ready donors and coordinate personalized outreach. Consider setting up regular upgrade campaigns focused on donors within $100-$500 of the next tier, and track individual results. To measure success, monitor increases in the number of donors moving up a tier, overall revenue growth from these donors, and improvements in donor retention among those targeted for upgrades. This approach transforms data into actionable Constituent Intelligence, enabling more intentional donor engagement and improved fundraising results.

## 2.5: Large Gift Growth (75th Percentile)

### QX4 Donors Showing Increased Giving Potential Analysis

*This analysis identifies donors who may be giving below their full potential by comparing their recent annual support to their largest single gift.*

Donors Showing Increased Giving Potential How to use the Donors Showing Increased Giving Potential analysis This analysis helps you identify donors who are showing signs of increased giving capacity and potential for greater engagement. By examining giving history, it highlights individuals whose annual giving in the last fiscal year exceeded a strategic threshold—specifically, those whose total exceeded the top donor benchmark set within your organization. The analysis also includes several supporting data points for each donor, such as their largest gift ever, average annual giving, and a flag indicating whether their largest gift is more than twice their average annual contribution. Together, these metrics give you a nuanced view of each donor's capacity, consistency, and outlier giving behavior. You can use this analysis to focus attention on donors with both the means and momentum to make transformative gifts. The inclusion of donor names, total giving last year, largest gift, and average annual giving allows you to quickly tailor your outreach, referencing past generosity or noting an exceptional gift. The Large Gift Flag is handy for spotting moments when a donor made an unusually large contribution, signaling a potential for future major gifts if the relationship is cultivated appropriately. Strategically, this analysis enables you to prioritize cultivation efforts and tailor stewardship to donors who are ready to increase their giving. Fundraising directors and development officers should review it collaboratively, using these insights to inform major gift prospect lists, upgrade appeals, and custom stewardship plans. Donor relations teams can leverage the supporting information to design personalized touchpoints, referencing specific donor milestones in communications or recognition. You should review this analysis regularly as part of your Constituent Intelligence routines to ensure you're acting on the latest signals of donor capacity and interest. Success can be measured by tracking the number of identified donors who accept upgrade solicitations, increases in major gift revenue, and improvements in donor retention rates among flagged individuals. By integrating these insights into your ongoing strategy, you can strengthen relationships and maximize fundraising outcomes.

## 2.6: Recaptured Donors YOY

## QX63 Most Recent Recaptured Donors Current Fiscal Year Analysis

*This analysis provides a real-time, detailed list of all donors who have been successfully "recaptured" in the current fiscal year after being lapsed.*

Most Recent Recaptured Donors Current FY How to use the Most Recent Recaptured Donors Current FY analysis This analysis identifies all donors who lapsed in their giving for more than a year and then made a gift in the current fiscal year, highlighting the most recent recapture event for each constituent. Pulling together data from your gifts history, constituent information, and giving thresholds reveals when and how a donor was recaptured, how long they lapsed, and at what giving level they were before and after recapture. The analysis draws on your organization s defined giving segments (such as Top, Middle, and Bottom donors) and calculates each donor s annual giving in their pre-lapse and recapture fiscal years, so you can easily see shifts in donor engagement and gift amount. You ll see each donor s name, their recapture fiscal year, how many months they lapsed, and their giving levels and total gifts before and after the lapse. Additional columns, like the most recent full fiscal year status and the fiscal year of their last gift, are included to help you personalize outreach and stewardship. For example, knowing a donor's most recent giving level and their recapture history allows you to tailor your thanks, share impact stories relevant to their giving segment, or re-engage them with appeals that match their demonstrated capacity and interests. The analysis relies on precise calculations-identifying lapsed periods greater than one year, mapping gifts to fiscal years (using your organization's July-June fiscal calendar), and assigning donors to giving segments based on custom thresholds. These calculations are critical, as they reveal not only who came back but also whether they returned at a higher, lower, or similar level and how long they were absent. Understanding these patterns helps you spot successful reactivation efforts and areas where more targeted stewardship is needed. You should review this analysis with your development officers and stewardship teams, focusing on recaptured donors who have the potential to rejoin at higher levels or who may need an extra touch to remain engaged. Use the detailed supporting information to plan personalized follow-ups, such as thank-you calls, impact updates, or invitations to upcoming events, especially for those whose giving level increased upon recapture. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure you are acting promptly on newly recaptured donors. To measure success, track the retention rates of recaptured donors in subsequent years, monitor growth in the value of recaptured gifts, and assess increases in personalized stewardship activities. By integrating these insights into your regular review cycles, you can strengthen donor relationships, reduce future lapses, and grow your base of loyal supporters.

## QX64 Most Recent Recaptured Donors Last Fiscal Year Analysis

*This report provides a deep-dive analysis of all donors who were successfully "recaptured" in the last full fiscal year.*

Most Recent Recaptured Donors Last FY How to use the Most Recent Recaptured Donors Last FY analysis This analysis identifies donors who were recaptured in the most recently completed fiscal year, meaning they renewed their support after an absence of at least one full year. By examining giving history, the analysis flags the most recent instance of recapture for each donor, focusing on gifts made after a lapse and summarizing key data such as the length of the lapse, donor giving levels before and after recapture, and the type of gift that led to their return. It draws on data from your constituent records, annual gift summaries, and your organization's customized giving level thresholds to segment donors and contextualize their engagement patterns. You will see, for each recaptured donor, not only their basic information and recapture details, but also supporting columns, such as their most recent giving level, total giving before their lapse, and the type of gift that brought them back. This additional context can help you tailor your stewardship and outreach, such as referencing their giving journey, acknowledging their renewed commitment, and matching engagement strategies to their giving level. For example, knowing the number of months they lapsed or whether they returned with a larger or smaller gift can inform how you rekindle and sustain their loyalty. Key metrics include the number of months lapsed between gifts, the donor's giving level before and after recapture (using your specific segment thresholds), and their current status as of the latest full fiscal year. These calculations help you distinguish between donors who rebound strongly and those who return at a lower level, allowing you to prioritize high-value or at-risk donors for further cultivation. This analysis is strategically valuable for targeting stewardship efforts, designing win-back campaigns, and monitoring the effectiveness of your recapture strategies over time. You should review it periodically as part of your Constituent Intelligence routines, especially after each fiscal year close. Fundraising directors, development officers, and donor relations managers are the primary audiences; use the insights to inform personal outreach, adjust segmentation, and strengthen your annual giving or lapsed donor reactivation plans. To maximize results, track success by measuring retention and upgrade rates among recaptured donors, as well as improvements in subsequent years' giving. Monitoring the proportion of recaptured donors who remain engaged or increase their giving will help you evaluate the impact of this analysis on your overall fundraising effectiveness.

## QX65 Recent Top Donor Recaptures Analysis

*This analysis provides a complete historical log of every time a top donor has lapsed for more than a year and subsequently returned.*

Recent Top Donor Recaptures How to use the Recent Top Donor Recaptures analysis This analysis identifies donors who previously gave at a top giving level, stopped donating for at least one year, and have since been successfully recaptured-meaning they returned after a significant lapse. It draws from your gift transaction history, constituent records, and giving segment thresholds to highlight all recapture events for top donors whose most recent recapture occurred within the last ten fiscal years. The analysis is organized by donor and details each recapture event, including the fiscal year of the lapse and recapture, the number of months lapsed, giving levels before and after recapture, and gift totals for relevant years. You will see columns such as donor name, recapture sequence, months lapsed, giving levels, and total giving in both the pre-lapse and recapture years, as well as their most recent giving status. These supporting details enable you to quickly assess not only who was recaptured, but also how their giving patterns have changed over time, helping you personalize follow-up and stewardship strategies. Key metrics include the months lapsed between gifts, the giving level before lapse, and the giving level upon recapture. These metrics are crucial for understanding the effectiveness of your recapture efforts and identifying donors who have the potential to return to or exceed previous giving levels. By focusing specifically on top-level donors, you can prioritize outreach to your most valuable supporters and tailor engagement based on their historical behavior. Strategically, you can use this analysis to spot trends in donor lapses and recaptures, develop targeted re-engagement campaigns, and allocate resources to those with the highest likelihood of reactivation and growth. It provides an evidence-based foundation for segmentation and prioritization in your Constituent Intelligence work. Development staff, particularly those responsible for major gifts or stewardship, should review this analysis as part of their regular Constituent Intelligence routines. Use the insights to recognize recently recaptured top donors in your portfolios, craft personalized acknowledgments, and design touchpoints that address the unique history and motivations of each donor. Consider also sharing findings with leadership to inform the overall retention strategy. To measure success, track the percentage of recaptured top donors who continue to give in subsequent years, monitor increases in post-recapture giving levels, and assess improvements in the overall retention rates among your top donor segments. This will help you demonstrate the tangible impact of using this analysis in your fundraising program.

**Type:** Summary+Detail | Lifecycle: Lapse Prevention, Recovery | Time: Retrospective | Audience: Operational

## QX66 Recent Middle Donor Recaptures Analysis

*This analysis provides a complete historical log of every time a middle donor has lapsed for more than a year and subsequently returned.*

Recent Middle Donor Recaptures How to use the Recent Middle Donor Recaptures analysis This analysis identifies donors who were previously classified as middle  level based on your organization's giving thresholds, subsequently lapsed for at least a year, and have then been recaptured with a new gift in a recent fiscal year. It draws on your gift records, donor segmentation thresholds, and constituent names, focusing on annual giving totals, giving history sequences, and the timing between gifts. The analysis provides a list of these recaptured donors, showing not only when and how long they lapsed, but also their giving levels before lapse, at recapture, and in the most recent full fiscal year. This gives you a clear view of which middle-level donors have re-engaged after a period of inactivity. You'll see detailed columns for each donor, including the donor's name, the number of recapture events, the fiscal years of pre-lapse and recapture gifts, the months lapsed, and the giving amounts before and after recapture. It also includes the latest full fiscal year status, which helps you assess if their re-engagement is sustained or at risk. These supporting details are valuable for crafting highly personalized approaches, as they allow you to quickly reference both the donor's historical significance and current engagement. Key calculations include identifying the donor's giving level during the fiscal year preceding the lapse, the length of the lapse in months, and how their giving compares at recapture and in the most recent year. This allows you to assess whether donors are returning at, above, or below their former giving levels, and helps you prioritize outreach to those most likely to upgrade or require additional stewardship. Strategically, you can use these insights to target stewardship and re-engagement efforts for recently recaptured middle donors, who represent a segment with potential for growth or risk of relapse. Development officers and donor relations staff should review this analysis-ideally as a regular part of Constituent Intelligence routines- to identify middle-level donors who merit special attention, personalized acknowledgments, or tailored upgrade strategies. You should also consider using this information to inform segmentation for appeals or stewardship campaigns, as well as to identify donors whose giving patterns suggest a need for intervention. To measure the success of using this analysis, track the retention and upgrade rates of recaptured middle donors, monitor changes in their giving levels over time, and assess the response to targeted stewardship actions. By systematically applying these insights, you can enhance donor retention, increase annual giving, and foster long-term donor relationships.

**Type:** Summary+Detail | Lifecycle: Lapse Prevention, Recovery | Time: Retrospective | Audience: Operational

## QX67 Recent Bottom Donor Recaptures Analysis

*This analysis provides a complete historical log of every time a bottom donor has lapsed for more than a year and subsequently returned*

Recent Bottom Donor Recaptures How to use the Recent Bottom Donor Recaptures analysis This analysis identifies donors who previously gave at the lowest giving segment (Bottom Donors), lapsed for at least a year, and have recently been recaptured—meaning they made a new gift after a significant gap. It brings together data from your constituent, gift, and threshold tables to segment annual giving into bottom, middle, and top levels based on your own organization's thresholds. For each donor, you see not only the recapture event but also their giving level and amount in both the fiscal year before lapse and the year in which they returned, along with their status in the most recently completed fiscal year. The analysis highlights the sequence and timing of donor lapses and recaptures, including the number of months the donor was lapsed, as well as their last gift date and fiscal year. Importantly, it includes donor name information and the latest giving segment status details, enabling you to tailor personal outreach and stewardship strategies. These supporting columns help you quickly spot patterns in recaptured donor behavior and segment your follow-up accordingly. Key metrics include the number of recapture events per donor, the fiscal years involved, the months lapsed, and the transition of giving levels before and after recapture. By focusing on donors who were previously at the bottom tier, you can assess which strategies are successfully re-engaging your most at-risk donors and whether these donors are increasing or maintaining their giving level upon return. You should use this analysis to identify which bottom-segment donors were successfully recaptured over the last decade and to understand how their giving behavior changes after recapture. This is particularly useful for development officers and stewardship teams who want to prioritize outreach to newly recaptured donors or identify effective recapture tactics. Donor relations staff can use the detailed donor and giving history columns to inform personalized re-engagement efforts and thank-you communications. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. Review it quarterly or after major campaigns to monitor recapture trends and adjust your strategies for lapsed donors. Success can be measured by tracking improvements in recapture rates, increases in post-recapture giving levels among bottom-tier donors, and positive shifts in fiscal year segment status over time. Ultimately, applying these insights should result in higher donor retention and a stronger, more engaged base of support.

## QX43 Current vs Prior Year Top 100 Analysis

*This analysis provides a dynamic leaderboard of your top 100 donors for the current year, comparing their current rank to their final rank last year.*

Current vs Prior Year Top 100 How to use the Current vs Prior Year Top 100 analysis This analysis enables you to directly compare the top 100 donors by giving in the current fiscal year to their performance in the prior fiscal year, offering a powerful lens into donor retention, upgrade, and engagement trends. Drawing from your core Constituent Intelligence data, it aggregates all giving from both individuals and organizations, establishing fiscal years by shifting calendar dates six months forward, ensuring alignment with a typical July-to-June nonprofit fiscal calendar. By summing each donor's total gifts for both the current and previous fiscal years, the analysis ranks donors for each period and highlights changes in their relative positions. You receive not just the donor's name and unique ID, but also their total giving amounts for both years, along with their rank among all donors in each period. This supporting information allows you to quickly identify who has increased, maintained, or decreased their giving, and to personalize your stewardship and outreach accordingly. For example, a donor who has moved up in rank may be ready for a deeper engagement, while a top donor whose giving has declined could benefit from proactive re-engagement efforts. The key metrics, calculated total giving per donor and the corresponding ranks in both years, are essential for identifying giving trends, emerging major donors, and loyalty risks. This analysis provides you with a concise list of your highest-value supporters, so you can focus your attention where it matters most. Reviewing this data regularly helps you spot both positive momentum and potential lapses within your top segment. You should review this analysis as part of your Constituent Intelligence routines, particularly at fiscal year-end and quarterly checkpoints. Development officers, major gift managers, and fundraising directors will find it especially valuable for portfolio reviews, campaign planning, and strategy sessions. Use the insights to tailor touchpoints, prioritize meetings, flag stewardship opportunities, and set retention or upgrade targets for your team. To measure success, track changes in donor retention rates, year-over-year giving growth among the top 100, and the number of at-risk relationships that are successfully renewed or upgraded following targeted engagement based on this analysis.

## QX84 Giving Pyramid Current Fiscal Year Analysis

*This analysis breaks down every gift by its size to show how many gifts and donors fall into each level with percentage distributions.*

Giving Pyramid CFY How to use the Giving Pyramid CFY analysis This analysis provides a clear breakdown of giving patterns within the current fiscal year, categorizing all gifts from your database into specific giving levels, such as $0-$ 99.99, $100-$ 499.99, and so on, based on the amount of each gift. By referencing only gifts made within the current fiscal year, you ensure that you are working with the most up-to-date snapshot of donor behavior. For each giving level, the analysis calculates key fundraising metrics, including the number of gifts, the number of unique donors, the total dollars contributed, the average and median gift sizes, as well as the range from the smallest to the largest gift. Additionally, the primary value of this analysis is that it reveals the percentage of total giving each gift size level represents, allowing you to see at a glance the gift sizes your donors are most comfortable with, or the gift sizes that your appeal asks are pushing them towards. Development directors and annual giving managers should review this analysis regularly, especially at key points in the fiscal year or campaign cycle. Schedule this analysis to be reviewed periodically as part of your Constituent Intelligence routines. Use the findings to guide decisions about resource allocation, targeted appeals, appeal amounts, and personalized stewardship plans. For instance, if you notice a strong base at a certain gift size level, consider launching an upgrade campaign to move donors up the pyramid. If you see a small number of donors making large gifts, prioritize relationship-building efforts with those individuals to ensure continued engagement. Success should be measured by improvements in donor retention across tiers, increases in upgrade rates between gift size levels, and year-over-year growth in total giving. By leveraging this analysis as a foundation for more personalized outreach and strategic planning, you will be better positioned to maximize both donor satisfaction and fundraising outcomes.

## QX109 High Lift Donors Aug Current Fiscal Year Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to August fundraising results this year.*

High Lift Donors Aug CFY How to use the High Lift Donors Aug CFY analysis This analysis identifies individual donors whose giving in the target month of August for the current fiscal year significantly exceeds their own average giving for August across the previous three years. It draws from your organization's gift transaction data, comparing each donor's total giving in August this year to their historical August giving, and highlights those whose contributions have increased (lifted) above their personal norm.  For each qualifying donor, the analysis provides the average amount they gave in August over the past three years, their actual August giving this year, the dollar increase ( Personal Incremental Lift ), and the percentage increase over their baseline. Alongside these calculated fields, additional columns such as donor names or organization affiliations can help you craft more personalized recognition or engagement strategies tailored to the individual donor's history and context. The most important metrics revealed are the incremental lift in dollars and percentage for each donor. These highlight not just absolute increases, but also identify donors whose engagement is accelerating relative to their own patterns-key signals for stewardship, timely recognition, or deeper cultivation. By focusing on positive lift donors, you ensure your outreach prioritizes those demonstrating new or increased commitment, rather than simply repeating past behavior. Additionally, if this month overperformed relative to your expectations, this analysis may help you identify the reason. Use this analysis to prioritize follow-up with donors who are showing new momentum. Development officers, stewardship staff, and anyone responsible for donor engagement should review it, ideally in August and in the subsequent months, to ensure that increases in giving are acknowledged in a timely and meaningful way. Consider tailored thank-you calls, handwritten notes, or invitations to special events for these high-lift donors. Fundraising directors can also use these insights to refine segmentation strategies and to identify broader trends in donor responsiveness to August campaigns or appeals. You can measure the success of using this analysis by tracking retention rates, year-over-year lift in giving for this cohort, and the conversion of high-lift donors into higher giving societies or multi-year pledges. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you consistently surface and act on emerging opportunities within your donor base.

## QX120 High Lift Donors Current Fiscal Year DEC Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to December fundraising results this year.*

High Lift Donors CFY DEC How to use the High Lift Donors CFY DEC analysis This analysis identifies donors who have significantly increased their giving in December (the target month) of the current fiscal year compared to their own average giving in December over the prior three years. It pulls together gift data and constituent details to spotlight those individual donors who are making a greater impact this year, helping you understand which supporters are showing the largest personal lift in seasonal giving. For each donor, the analysis examines their total giving in December for each of the past three fiscal years and then calculates their average baseline for that month. It then compares this baseline to their actual giving in December of the current fiscal year. The analysis only includes donors who have exceeded their previous personal average, showing both the absolute dollar lift and the percentage increase. Alongside these metrics, it also lists supporting information such as the donor's name (whether individual or organization), which can help you tailor outreach and stewardship strategies for each high-lift donor. The personal incremental lift, both in dollars and percentage, enables you to quickly see which donors are exceeding their own historical December giving. This is valuable because it highlights not just high-dollar donors, but those who are increasing their commitment, regardless of giving level. You can use these insights to prioritize stewardship, thank donors for their increased support, and potentially identify candidates for future major gifts, recurring giving campaigns, or personal outreach. It can also provide insight into why this month may have exceeded expectations. Fundraising directors, major gift officers, and donor stewardship teams should review this analysis, especially in the weeks following December. You should use it to customize your acknowledgement and cultivation plans, reaching out to high-lift donors with personalized messages that recognize their increased generosity. Incorporating this analysis into your Constituent Intelligence routines ensures you consistently identify and engage donors whose behavior signals deeper commitment. To measure the success of using this analysis, track year-over-year retention and upgrade rates among identified high-lift donors, monitor the effectiveness of personalized stewardship actions, and assess whether these donors are moving into higher engagement segments or increased giving tiers over time.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Current/Monitoring | Audience: Operational

## QX121 High Lift Donors Current Fiscal Year NOV Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to November fundraising results this year.*

High Lift Donors CFY NOV How to use the High Lift Donors CFY NOV analysis This analysis helps you identify donors who have significantly increased their giving in November of the current fiscal year compared to their own personal three-year average for that same month. It draws on your giving transaction data and constituent records, focusing on the month of November and aligning fiscal years to help you see meaningful trends. The analysis calculates each donor's average giving in November over the prior three fiscal years and compares it to their giving in November of the current year. You see both the dollar amount and percentage increase ( personal incremental lift), spotlighting donors who have exceeded their historical pattern. You receive a list of individual donors, including both their personal and organizational names, which allows you to tailor your outreach. The included columns—such as average prior giving, current year giving, and the amount and percentage of lift—provide the context needed to understand each donor's unique trajectory. This supporting information is valuable for segmentation and crafting personalized stewardship or solicitation strategies. The key metrics are the Average Giving in the Target Month (Prior 3 Years), Giving in the Target Month (Current FY), and both the dollar and percentage Personal Incremental Lift.  These calculations matter because they highlight not just who gave, but who has positively changed their behavior, enabling you to recognize momentum and intervene with timely engagement. Strategically, you can use this analysis to prioritize outreach to donors demonstrating notable growth, plan stewardship actions, and inform annual fund strategies. Reviewing this analysis regularly as part of your Constituent Intelligence routines helps you spot new opportunities and avoid missing donors who may be ready for deeper engagement or recognition. It is also helpful to identify whether a spike in giving in this month was the result of broader giving patterns, or a cmall number of donors who significantly raised their giving levels above their historical norms. Development officers and fundraising managers should review this analysis after the close of the target month. Use it to identify candidates for thank-you calls, personalized impact updates, or targeted upgrade asks. Consider sharing highlights with board members or leadership for cultivation purposes. To measure success, track the retention and upgrade rates of these high-lift donors, monitor subsequent giving patterns, and assess whether your tailored outreach leads to increased lifetime value and deeper donor relationships.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Current/Monitoring | Audience: Operational

## QX122 High Lift Donors Current Fiscal Year OCT Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to October fundraising results this year.*

High Lift Donors CFY OCT How to use the High Lift Donors CFY OCT analysis This analysis is designed to help you identify donors who have increased their giving in October of the current fiscal year compared to their own personal average for that month over the past three years. By focusing on "high lift" donors-those who have exceeded their historical October giving-you gain a targeted view of individuals who are showing an increase in engagement and philanthropic intent right now. The analysis draws from your Gifts and Constituents data tables, leveraging each donor s giving history for the same month across multiple years, as well as their current fiscal year activity. This allows you to see not only who is giving more, but by exactly how much, both in dollar terms and percentage increase. You'll see columns showing each donor's name, their average giving for the target month in the three prior years, their current giving this October, the incremental lift in dollars, and the percent lift. These metrics matter because they spotlight donors who are stepping up, allowing you to prioritize stewardship where it's likely to be most effective.  From a strategic perspective, this analysis helps you focus your time and resources on donors who are demonstrating increased capacity and interest. Development officers and fundraising directors should use these insights to inform thank-you calls, targeted stewardship communications, or even cultivation for higher-level giving opportunities. As part of your Constituent Intelligence practices, you should schedule this analysis to be reviewed periodically-ideally at the close of each key giving month-to spot trends and act promptly. Actionable recommendations include: reviewing the analysis at the start of each month by the development director and assigned gift officers; utilizing the incremental lift data to select donors for upgraded stewardship or leadership gift cultivation; and sharing the list with stewardship teams to ensure timely and personalized recognition. Success should be measured by tracking retention and upgrade rates among these high-lift donors, the response to customized outreach, and ultimately, growth in year-over-year giving within this segment. By integrating this analysis into your Constituent Intelligence routines, you can make more informed decisions and strengthen donor relationships where momentum is strongest.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Current/Monitoring | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Current Fiscal Year) (month variants)
**Collections:** Year-End Campaign War Room

## QX123 High Lift Donors Current Fiscal Year SEP Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to September fundraising results this year.*

High Lift Donors CFY SEP How to use the High Lift Donors CFY SEP analysis This analysis identifies donors who have significantly increased their giving in September of the current fiscal year (CFY), compared to their average giving in that same month over the prior three fiscal years. It draws on your gift transaction data, specifically looking at gifts made in September (the ninth month), and compares each donor's current September giving to their personal three-year September average. Only those donors whose giving this year exceeds their baseline are included, enabling you to focus on individuals demonstrating notable positive change. The analysis presents a list of these high-lift donors, including their names (or organization names), constituent IDs, historical average giving for September, actual giving this September, the dollar amount of their personal incremental lift, and the percentage increase over their baseline. These supporting columns provide context that helps you understand not just who increased their giving, but by how much and at what rate, equipping you to tailor your follow-up and stewardship with specific, data-driven talking points. Key metrics include each donor's Personal Incremental Lift ($) and their % Personal Incremental Lift.  The dollar lift spotlights donors who have made the largest financial step up, while the percentage lift highlights those showing the strongest proportional growth. Both are crucial as you prioritize outreach: large dollar increases may indicate capacity for major gifts, while high percentage increases can reveal emerging donors with deepening engagement. Strategically, you can use this analysis to recognize and steward donors whose behavior signals increased commitment or capacity. Development officers should consider customizing acknowledgment messages or outreach strategies based on the magnitude and history of each donor s lift. Major gift officers, annual fund managers, and stewardship teams should review this analysis-ideally monthly or quarterly, as recommended for your Constituent Intelligence routines- to identify prospects for cultivation, upgrade, or special recognition. To apply these insights, first flag high-lift donors for prompt, personalized thank-yous that reference their specific increase. Second, analyze trends among these donors to refine your segmentation and identify those who may be ready for deeper engagement or a campaign ask. Third, use these metrics as input for prospect scoring models and stewardship planning. To measure success, track subsequent retention and upgrade rates among high-lift donors, monitor response rates to targeted outreach, and assess growth in this cohort's overall giving year over year. Ultimately, effective use of this analysis should support higher donor satisfaction, increased giving, and stronger relationships across your constituent base.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Current/Monitoring | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor
**Variant Family:** High Lift Donors (Current Fiscal Year) (month variants)
**Collections:** Year-End Campaign War Room

## QX124 High Lift Donors Current Fiscal Year JUL Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to July fundraising results this year.*

High Lift Donors CFY JUL How to use the High Lift Donors CFY JUL analysis This analysis helps you identify donors who have significantly increased their giving in the target month of the current fiscal year (CFY), compared to their personal giving average for the same month over the previous three years. It draws from your Gifts and Constituents data to calculate an individual baseline  for each donor, their average gift amount in July (or your specified target month) from each of the past three fiscal years. It then compares this baseline to the donor s actual giving in the same month of the current fiscal year, making adjustments for your organization s fiscal calendar. You will see a list of donors who gave more in the target month this year than their own three-year average, along with key metrics: their three-year average, current fiscal year giving for the month, the dollar amount of their increase (Personal Incremental Lift), and the percent lift. The inclusion of donor names (or organization names) and a deceased flag allows you to quickly focus on active, living donors and tailor outreach appropriately. This supporting information is vital for personalized stewardship, enabling you to craft messages that recognize specific giving patterns and validate their increased commitment. The core calculations-personal incremental lift in both dollar and percentage terms-are essential for segmenting high-potential donors who are demonstrating increased engagement. By focusing on month-specific lift, you can uncover timely opportunities to deepen relationships, perhaps recognizing donors for their increased support during key campaigns or seasonal drives. You should have your gift officers and annual fund managers review this analysis each month as part of their Constituent Intelligence routines. Use the insights to prioritize thank-you calls, invite high-lift donors to exclusive events, or prompt tailored upgrade solicitations. For donors with the highest lift, consider personalized recognition and deeper cultivation strategies, as they are signaling growing affinity. Success can be measured by tracking subsequent retention and upgrade rates among the high-lift segment, monitoring responses to targeted stewardship, and, over time, evaluating whether these donors move into higher giving tiers or planned giving pipelines. By systematically leveraging this analysis, you can drive both immediate and long-term growth in donor support.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Current/Monitoring | Audience: Operational

**Collections:** Year-End Campaign War Room

## QX125 High Lift Donors Current Fiscal Year JUN Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to June fundraising results this year.*

High Lift Donors CFY JUL How to use the High Lift Donors CFY JUN analysis This analysis identifies donors who have significantly increased their giving in June of the current fiscal year compared to their own average giving in June over the prior three years. It uses giving data from your Gifts and Constituents tables, focusing on each donor's gift amounts made specifically in June, adjusted to your organization's fiscal year calendar. For each donor, the analysis calculates their three-year historical average for June and then compares it to their actual giving in June of the current year. Only those donors whose June giving this year exceeds their personal historical average are included, highlighting individuals with a measurable increase in their support. The key metrics in this analysis are the donor's average June giving for the past three years, their actual giving in June this year, the dollar amount of their personal incremental lift, and the percentage increase over their baseline. These calculations help you distinguish donors who are trending upward in engagement, rather than those whose giving is flat or declining. The inclusion of donor name fields (such as individual or organization donor) allows you to quickly identify the right contact for tailored stewardship, supporting a more personalized and informed outreach strategy. Strategically, you should use this analysis to prioritize outreach to donors demonstrating increased commitment, as these individuals are more likely to be receptive to deeper engagement, stewardship, or even upgraded solicitations. Reviewing these results as part of your Constituent Intelligence routines ensures you remain proactive in recognizing and cultivating emerging top supporters. Fundraising directors, major gift officers, and annual giving managers should review this analysis each June and use the insights to craft personalized thank-you notes, targeted upgrade appeals, or invitations to special events for these highly supportive donors. You can measure the success of using this analysis by tracking subsequent retention rates, as well as the increases among identified donors and the effectiveness of targeted stewardship actions. By focusing on these high-lift individuals, you position your team to make data-driven decisions that strengthen donor relationships and drive fundraising growth.

## QX126 High Lift Donors Current Fiscal Year MAY Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to May fundraising results this year.*

High Lift Donors CFY MAY How to use the High Lift Donors CFY MAY analysis This analysis identifies donors who have significantly increased their giving during May, comparing their current fiscal year (CFY) contributions in that month to their own average giving in May over the past three years. Drawing on both gift transaction data and constituent records, the analysis isolates individuals and organizations that have demonstrated a notable increase in their May giving, surfacing both the dollar amount and the percentage growth relative to their personal historical baseline. It highlights each donor's prior three-year May average, their actual gift total for May this fiscal year, the incremental dollar difference, and the percent change, allowing you to spot those whose commitment has surged quickly. You can use this analysis to prioritize stewardship and outreach, as it offers a focused list of donors whose increased generosity signals heightened engagement or new philanthropic intent. Since the output includes both individual and organizational donor names as well as their giving histories, you should leverage this supporting information to personalize your follow-up, referencing their historical patterns and recent lift can make your communication more meaningful and relevant. The core metrics—personal incremental lift in dollars and percentage—are particularly valuable because they show not just who gave the most, but also who is stretching beyond their norm. This can help you avoid overlooking mid-level or loyal donors whose increased support may be especially significant to them, and whose motivation might be deepened with timely recognition. Strategically, you should use this analysis to inform tailored thank-you messages, qualification for giving societies or recognition programs, and to identify candidates for leadership or major gift cultivation. Development officers, donor relations staff, and annual giving managers should review it together to coordinate next steps and ensure no high-potential donor is missed. This analysis is recommended to be reviewed periodically during the month of May as part of your Constituent Intelligence routines, ensuring you are responsive to real-time changes in donor behavior. To measure the success of using this analysis, track subsequent donor retention rates among high-lift givers, increases in average gift size in future cycles, and the conversion rate of identified donors into higher giving tiers or deeper engagement. Consistent application will help strengthen relationships, maximize fundraising results, and reinforce a data-driven approach to donor management.

## QX127 High Lift Donors Current Fiscal Year APR Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to April fundraising results this year.*

High Lift Donors CFY APR How to use the High Lift Donors CFY APR analysis This analysis identifies donors who have significantly increased their giving in April of the current fiscal year compared to their own historical average for that same month over the prior three years. Using data from your Gifts and Constituents tables, it calculates each donor's baseline giving for April across the past three fiscal years, then measures how much each donor gave in that month this year. It highlights those who have surpassed their personal historical average, showing both the dollar amount and percentage of their incremental lift. You ll see columns showing the donor s name, their average giving in the target month for the prior three years, their current fiscal year giving in that month, and the exact amount and percent by which they increased. This supporting information provides context to help you recognize their past engagement and identify patterns-essential for crafting tailored acknowledgments or stewardship messages. The key metrics, Personal Incremental Lift ($) and % Personal Incremental Lift, matter because they quantify not just who gave, but who gave more than their own established pattern. This goes beyond raw giving totals and flags donors who are deepening their commitment, identifying prime candidates for special outreach or further engagement. Strategically, use this analysis to quickly focus on donors who demonstrate increased loyalty or enthusiasm, whether they are major gift prospects or previously mid-level supporters showing new momentum. Development directors, annual giving managers, and donor relations staff should review these results to identify which high-lift donors merit individualized thanks, personal calls, or targeted cultivation efforts. For example, you might prioritize calling the top lifters or invite them to exclusive events, referencing their specific increase in your outreach. To evaluate your success, track the retention and future engagement of high-lift donors, measure whether personalized follow-up translates to further upgrades or multi-year commitments, and assess overall growth in donor loyalty. This analysis is recommended to be reviewed during and following the month, as well as yearly, as part of your Constituent Intelligence routines, ensuring that you consistently recognize and cultivate your most upwardly mobile supporters.

## QX128 High Lift Donors Current Fiscal Year MAR Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to March fundraising results this year.*

High Lift Donors CFY MAR How to use the High Lift Donors CFY MAR analysis This analysis helps you identify individual donors who have significantly increased their giving during a specific month, here, March , of the current fiscal year, compared to their own average giving in that same month over the prior three fiscal years. It singles out those donors who have surpassed their historical benchmarks for the month. By focusing on the Personal Incremental Lift ($) and % Personal Incremental Lift metrics, you can quickly identify which donors delivered the greatest step-change in their giving, not just those who gave the most in absolute terms. The data includes each donor s name (or organization), their average giving in the target month over the past three years, their current year s giving for that month, and the calculated lift in both dollars and percentage terms. This means you are not just seeing who gave more, but who is truly deepening their commitment relative to their own prior behavior-an essential facet of Constituent Intelligence. The inclusion of supporting details, like donor name fields, enables you to personalize outreach and recognition, tailoring your engagement to their specific giving patterns. Key calculations focus on comparing each donor's current giving to their three-year baseline for that same month. This reveals donors who may be newly motivated or responding to recent cultivation efforts, providing you with a shortlist of high-potential individuals to steward, thank, or invite to closer involvement. You should use this analysis to prioritize stewardship actions, customize your acknowledgment strategies, and inform targeted upgrade or retention campaigns. Fundraising directors and frontline gift officers should review it monthly, especially as part of their Constituent Intelligence routines. Consider reaching out personally to those with the highest incremental lift, sharing impact stories or exclusive updates. You can also segment these donors for leadership annual giving programs or special event invitations. Success should be measured by subsequent retention and upgrade rates among identified donors, the percentage of high-lift donors who respond to tailored outreach, and the overall growth in donor lifetime value following strategic engagement based on these insights.

**Type:** Summary+Detail | Lifecycle: Growth/Upgrade | Time: Current/Monitoring | Audience: Operational

## QX129 High Lift Donors Current Fiscal Year FEB Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to February fundraising results this year.*

High Lift Donors CFY FEB How to use the High Lift Donors CFY FEB analysis This analysis helps you identify which donors have significantly increased their giving during February of the current fiscal year compared to their own personalized giving averages for the same month over the past three fiscal years. It draws from your Gifts and Constituents data, calculating each donor's historical February giving baseline, then comparing that to their giving in February this year. You will see each donor's name, their average February giving baseline, their actual February giving this year, the dollar amount by which they have exceeded their baseline ( Personal Incremental Lift ), and the percentage increase over their norm. The analysis zeroes in on those donors whose generosity stands out specifically in the current fiscal year, February, highlighting only those who have given more than their own historical average for this month. By displaying both the absolute and percent lift, you gain a sense of both significance and scale, whether someone has made a modest increase or is showing truly exceptional engagement this year. The inclusion of donor names and types (individual or organization) helps you tailor your outreach; you can immediately see which contacts might merit a personal call, special acknowledgment, or deeper stewardship. You should use this analysis to prioritize stewardship efforts and to recognize donors who are trending upward in their support. Fundraising directors and frontline development officers can use it to craft personalized thank-you notes, flag potential prospects for increased requests, or identify donors ready for upgraded engagement. It is especially valuable as part of your Constituent Intelligence routines, giving you a timely pulse on which relationships are warming and which donors might be receptive to further cultivation. Review this analysis monthly, both during and after February, with a focus on staff responsible for donor retention, major gifts, and annual giving. Use the results to inform thank-you campaigns or to select donors for the yearly giving leadership strategy. Success can be measured by tracking whether those who are recognized for their lift subsequently maintain or increase their giving, as well as by monitoring improved donor retention and upgrades among those identified. The ultimate goal is to transform these high-lift moments into ongoing loyalty and increased lifetime value.

## QX130 High Lift Donors Current Fiscal Year JAN Analysis

*This analysis provides a retrospective look at the donors whose contribitions provided the greatest uplift to January fundraising results this year.*

High Lift Donors CFY JUL How to use the High Lift Donors CFY JAN analysis This analysis identifies and ranks donors who have significantly increased their giving during January of the current fiscal year compared to their own historical giving average for that same month over the prior three years.  The analysis draws on your Gifts and Constituents data, assessing each donor's giving in January for the last three fiscal years and comparing that average to their giving in January this year. Key columns include the donor's name, their average giving in January over the past three years, their current January giving, and the incremental lift, both in dollar value and percent increase. These metrics provide a precise and individualized view of donor momentum. The inclusion of both individual and organizational donor names helps you tailor outreach, while the calculated lift highlights those with the greatest surge in engagement. This supporting information enables you to craft highly personalized stewardship and solicitation strategies. Strategically, use this analysis to prioritize which donors are most likely to be receptive to deeper engagement, recognition, or targeted requests. Fundraising directors and frontline development officers should review this analysis, as it surfaces donors whose increased support may signal readiness for an upgrade conversation, affinity for your mission, or the success of recent cultivation efforts. Consider reaching out to these high-lift donors with personalized thank you messages, invitations to exclusive events, or opportunities for further involvement. Additionally, analyze whether any cultivation tactics used with these donors can be applied to broader segments. Success can be measured by tracking subsequent retention rates, upgrade rates, and overall giving among the high-lift segment. You should also evaluate the response to targeted stewardship efforts prompted by this analysis. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, allowing you to consistently identify and celebrate donors who are progressing upward in their giving journey and maximize the impact of your fundraising efforts.

## QX150 CFY results vs Monthly Baseline by Segment

*This analytic provides visibility into how individual segments have performed by month in the current FY relative to their 3 year trailing average.*

This analysis compares the current fiscal year's monthly giving performance against a three-year historical baseline, segmented by donor categories: Top, Middle, and Bottom. It leverages data from your gifts database, examining donor contributions over time to identify trends and deviations. By breaking down donor activity into segments and further into status categories (New, Retained, Recaptured), it provides a nuanced view of how different donor groups are performing. The analysis involves several critical calculations. It first establishes thresholds to categorize donors into segments based on their annual giving amounts. It then tracks each donor's status each year to determine whether they are new, retained, or recaptured. Using this data, the analysis calculates average monthly giving over the past three years segmented by donor status and segment. These historical figures serve as the baseline against which current fiscal year performance is measured. This analysis is strategically valuable for understanding how well you are engaging different donor segments compared to historical performance. It helps identify which segments are performing above or below expectations, allowing you to tailor engagement strategies accordingly. For example, if you notice that 'New' donors in the 'Top' segment are performing below baseline, it may signal the need for enhanced onboarding and engagement initiatives for high-potential new donors. You should consider running this analysis monthly to keep a close eye on donor performance trends. Development officers and fundraising directors are key stakeholders who should review this analysis regularly to inform strategic decisions. By identifying segments that are underperforming, you can prioritize these areas for targeted campaigns or personal outreach, ensuring that efforts are aligned with areas of greatest need. To measure success, track changes in donor retention rates and average gift size after implementing strategies based on this analysis. Additionally, monitor increases in giving from underperforming segments as a direct result of targeted engagement. By using this analysis regularly, you can enhance your understanding of donor behavior, improve relationship management, and ultimately increase fundraising effectiveness.

## QX166 Middle Segment Donor Loyalty Analysis

*This analytic analyzes the long-term loyalty of donors who have been in your Middle Segment, focusing on the consistency of their mid-level support over many years. It also identifies how many years these same donors may have contributed at the Top Segment level.*

This analysis focuses on understanding the loyalty of donors classified within the Middle Segment, examining their giving patterns over multiple fiscal years. It utilizes data from your donor database, specifically looking at gift amounts and dates, to identify how consistently these mid-level donors have contributed over time. The analysis also assesses how many years these same donors have contributed at a higher, Top Segment level, providing a comprehensive view of their giving history. Key metrics derived from this analysis include the total number of years each donor has contributed within the Middle Segment, the maximum consecutive years of giving, and the current streak of consecutive contributions. These metrics are essential as they help you identify which donors are consistently engaged and which may need re-engagement strategies. For example, knowing a donor's streak length helps you understand their commitment level; a long streak may indicate a loyal supporter, while a break in contributions could signal a potential lapse in engagement. The strategic value of this analysis lies in its ability to inform your fundraising strategies and donor stewardship efforts. By identifying loyal donors who have a history of giving, you can tailor your communications and engagement strategies to reinforce their relationship with your organization. You may choose to acknowledge their loyalty with special recognition, targeted appeals, or invitations to exclusive events, thus enhancing their connection and likelihood of continued support. To maximize the benefits of this analysis, you should consider running it annually after the close of the fiscal year, allowing you to capture the most recent giving patterns. It would be beneficial for fundraising directors and development officers to review the findings, as they can directly apply insights to donor engagement strategies. Additionally, consider integrating this analysis into your annual donor stewardship planning to proactively address any potential lapses in giving. Success measures for evaluating the impact of using this analysis could include tracking the increase in retention rates among Middle Segment donors, monitoring the uplift in total contributions from these donors post-engagement initiatives, and assessing the growth in the number of donors moving from the Middle to the Top Segment. By implementing targeted strategies based on this analysis, you can enhance donor loyalty, leading to increased lifetime giving and stronger organizational support.

### QX167 Bottom Segment Donor Loyalty Analysis

*This analytic looks at donor loyalty in your Bottom Segment.*

This analysis provides a comprehensive look into donor loyalty specifically among constituents categorized as belonging to the Bottom Segment of your donor pool. It utilizes data from multiple sources, including information on constituents and their gift histories, to track giving patterns across fiscal years. By focusing on the Bottom Segment, you can identify trends in donor behavior, which is critical for developing strategies aimed at retention and engagement. The analysis calculates several key metrics. It first determines the total annual giving for each constituent, then identifies those who have consistently given within the Bottom Segment. Key insights include the current streak of consecutive years a donor has contributed, the maximum streak length historically, and the total number of years a donor has been classified in the Bottom Tier. It also evaluates any upward movement into the Middle or Top Tiers, which can signal potential for increased engagement and giving. Understanding these metrics is essential because they reveal not just how often donors give, but also how loyal they are over time. For instance, a donor with a long streak of contributions, even if they are small, may be more likely to respond positively to targeted retention efforts than a donor who has given sporadically. Moreover, recognizing donors who have moved up tiers can help you tailor communications and solicitations that acknowledge their increased capacity or willingness to give. To leverage this analysis effectively, consider running it on a quarterly basis. This frequency allows you to monitor trends closely, especially during critical fundraising periods. Fundraising directors and development officers should review the findings to identify constituents eligible for targeted engagement initiatives, such as personalized outreach or special recognition programs. You can apply the insights by developing tailored stewardship plans for loyal Bottom Segment donors to encourage sustained giving or to motivate them to ascend into higher giving tiers. To measure the success of using this analysis, establish metrics such as increased donor retention rates in the Bottom Segment, the number of donors who transition to higher tiers, and overall growth in annual giving from these constituents. Regularly assessing these metrics will allow you to gauge the effectiveness of your engagement strategies and adjust your approaches as needed to maximize donor loyalty and support.

## QX101 Segmentation Data Last Fiscal Year-1 Analysis

*This analysis (often used as a report) contains Segmentation Data from the year prior to the Last Fiscal Year*

Segmentation Data LFY-1 How to use the Segmentation Data LFY-1 analysis This analysis provides you with a ranked list of donors based on their total giving during the fiscal year immediately preceding the last completed fiscal year. By evaluating each donor's contributions during this specific period, you gain a clear, historical benchmark to identify patterns in giving behavior, segment your donor base, and shape engagement strategies. The analysis uses gift data linked to each constituent and excludes anyone marked as deceased, ensuring your focus remains on current, active prospects. The core metric calculated is Total Giving Prior FY,  which shows the sum of each donor's contributions from that designated fiscal year. This metric is crucial for understanding which donors showed strong support in the near past but may not have given in the most recent year, revealing lapsing or downgraded donors. When combined with other constituent details, such as contact information, giving history, or engagement scores, this analysis can help you tailor outreach with more context and personalization. You should use this set of analyses to identify high-potential lapsed or downgraded donors for re-engagement campaigns, stewardship efforts, and targeted solicitations. Development officers, donor relations managers, and fundraising directors will benefit most from reviewing this regularly, especially during planning cycles for annual appeals or retention campaigns. Reviewing the analysis as part of your Constituent Intelligence routines ensures you maintain a proactive approach to donor lifecycle management. To act on these insights, assign development staff to focus on donors who gave significantly in the prior fiscal year but not since, craft individualized messages that reference their historical support, and prioritize these individuals for personal follow-up. Additionally, use the segmentation to support moves management and to refine your ask amounts, ensuring your outreach is both relevant and compelling. Measure your success by tracking reactivation rates of lapsed donors, overall retention percentages, and year-over-year giving increases from the identified segments. Improvements in these metrics will indicate the effectiveness of using this analysis to guide your constituent engagement strategies.

### QX54 First-Time Top Donors (Last 3 Years year) Acquisition by Month Analysis

*This analysis analyzes the second-year giving behavior of your most valuable new supporters: those who qualify as top-tier donors in their very first year.*

First-Time Top Donors (L3 yr) Acquisition by Month Analysis How to use the First-Time Top Donors (L3 yr) Acquisition by Month Analysis analysis This analysis helps you understand the monthly patterns in acquiring first-time top donors —those who, in their first fiscal year of giving, donate at or above your defined "top donor" threshold-over the last three fiscal years. Drawing from your gift and constituent databases, the analysis identifies each new top donor by their first gift month and fiscal year, tracks their giving in that initial year, and monitors whether they continue giving in the following year, including whether they give again in the same month ("anniversary giving"). The data powering this analysis includes constituent IDs, gift dates and amounts, annual giving totals, and retention patterns, as well as the custom "top donor" threshold set by your organization. For each acquisition month, you see how many new top donors you acquired, their average first gift, their average total giving in year one and year two, as well as two crucial retention metrics: the percentage who gave again the following fiscal year, and the subset who made their second-year gift in the same month they were acquired. These metrics reveal seasonality in donor acquisition, the effectiveness of engagement efforts, and the relative strength of early donor relationships. Use this analysis to identify the months that are most effective for acquiring high-value new donors, monitor year-over-year retention trends, and inform the timing and content of your stewardship strategies. For example, if you notice that donors acquired in certain months have higher retention or anniversary giving rates, you might adjust campaign timing, event calendars, or personalized follow-ups accordingly. If the analysis lists individual donors and includes their giving patterns or engagement markers, use these details to tailor outreach and deepen relationships, personalizing stewardship based on the timing and amount of their initial commitment. Development directors and donor relations staff should review this analysis regularly—ideally, monthly or quarterly —as part of their Constituent Intelligence routines, particularly following key campaign periods or fiscal year transitions. Apply the insights by prioritizing stewardship touchpoints for recent top donor cohorts, testing new acquisition messages during high-performing months, and setting targeted retention goals. Success can be measured by tracking increases in next-year retention rates, growth in the number of first-time top donors acquired, and improvements in average gift sizes from these cohorts. Ultimately, using this analysis will help you develop a more predictive and data-driven approach to major gift pipeline development and long-term donor value.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective | Audience: Operational

## QX55 First-Time Middle Donors (Last 3 Years year) Acquisition by Month Analysis

*This analysis analyzes giving by month of first time Middle segment donors to determine when the most valuable were acquired.*

First-Time Middle Donors (L3 yr) Acquisition by Month Analysis How to use the First-Time Middle Donors (Last 3 years) Acquisition by Month Analysis analysis This analysis identifies and evaluates new middle-level donors-those who have given for the first time in the last three fiscal years at levels within your organization's defined middle donor range-and tracks their acquisition trends by month. Drawing from your Gifts data and organizational thresholds for middle donor amounts, this analysis highlights when these donors first contribute, the amount they initially give, and their total giving in their first and second years. Importantly, it calculates two retention metrics: the percentage who give again in their second fiscal year (Next Fiscal Year Retention Rate (%)) and, of those, the proportion making their second-year gift in the same month as their original gift (Next Fiscal Year Anniversary Rate (%)). You can use this analysis to identify the most effective months for acquiring new middle donors, assess the average giving levels in the first and second years, and uncover patterns in donor retention and giving behavior. By understanding which acquisition months yield donors with higher retention or upgrade rates, you can tailor campaigns and stewardship efforts to achieve optimal long-term value. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, allowing you to spot emerging trends over time. Development officers and fundraising directors should review this analysis monthly and after major campaigns to inform strategies for donor acquisition timing and follow-up. Suppose you observe that donors acquired in certain months (for example, during a year-end campaign) have higher retention and anniversary giving rates. In that case, you can time stewardship communications and renewal asks more precisely, for instance, targeting anniversary months with tailored outreach for future gifts. Additionally, average gift and total giving figures enable you to identify months where new donors tend to enter at higher levels, suggesting opportunities to optimize scheduling of future campaigns and appeals for maximum impact. You should measure success by tracking increases in next-year retention and anniversary rates for new middle donors, as well as growth in average second-year giving. Over time, improved results should translate into stronger donor pipelines and higher overall revenue from the middle donor segment, validating the strategic use of Constituent Intelligence to guide your engagement efforts.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective | Audience: Operational
**Segments:** Middle, New | Scope: Segment
**Variant Family:** First-Time Donors Acquisition by Month (segment variants)
→ Also Try: QX52 First-Time Middle Donors (10yr) Annual A

## QX56 First-Time Bottom Donors (Last 3 Years year) Acquisition by Month Analysis

*This analysis looks at giving by month of first time bottom level donors to determine which months yield the most valuable of them.*

First-Time Bottom Donors (L3 yr) Acquisition by Month Analysis How to use the First-Time Bottom Donors (L3 yr) Acquisition by Month Analysis analysis This analysis enables you to track and understand the acquisition patterns and early retention performance of your first-time bottom donors- those whose total giving in their first fiscal year is at or below your organization's defined bottom donor threshold-over the past three fiscal years. Drawing on your Gifts data and a segment threshold from your Constituent Intelligence system, the analysis identifies when new bottom-tier donors first give, the value of their initial gifts, and how well they are retained into their next fiscal year. It also highlights whether retained donors give again during the same month in their second year, indicating potential for anniversary or habit-forming giving behavior. You will see, for each acquisition month, the number of new bottom-level donors acquired, the average first gift size, average total giving in their first and second years, and two critical retention metrics: the percentage who gave again in the following fiscal year, and, of those, the percentage who repeated their gift in the anniversary month. These measures help you pinpoint which months are most successful for acquiring bottom-tier donors and which months yield better long-term retention, allowing you to optimize future campaigns and stewardship strategies accordingly. Frontline fundraisers can leverage the detailed donor-level data supporting this analysis to personalize outreach. For example, knowing a donor s first gift amount, acquisition month, and retention pattern can help tailor messages-such as referencing their giving anniversary or acknowledging consistent support. Strategically, utilize these insights to refine donor acquisition timing, adjust stewardship touchpoints, and prioritize follow-up with recent donors who are at risk of lapsing. Development directors, annual giving managers, and donor engagement staff should review this analysis monthly to spot trends, inform campaign planning, and target retention efforts. Consider segmenting stewardship by acquisition month or testing tailored anniversary communications for cohorts showing high anniversary retention rates. To measure success, track improvements in first-year and second-year retention rates, increased average gift amounts among bottom donors, and the growth in anniversary giving rates over time. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure your strategies remain data-driven and responsive to donor behavior.

**Type:** Cohort | Lifecycle: Acquisition, Retention | Time: Retrospective | Audience: Operational

**Variant Family:** First-Time Donors Acquisition by Month (segment variants)
→ Also Try: QX53 First-Time Bottom Donors (10yr) Annual A

## QX58 First-Time All Donors Acquisition Month Ranking (L3yr) Analysis

*This analysis analyzes the long-term value of your new donors based on the month they were acquired.*

First-Time All Donors Acquisition Month Ranking (L3yr) How to use the First-Time All Donors Acquisition Month Ranking (L3yr) analysis This analysis helps you understand when first-time donors are acquired throughout the year and how their long-term value and retention trends differ by month. It draws on your last three full fiscal years of giving data, using a Constituent Intelligence approach to focus on donors whose first gift amount falls into your bottom segment (typically your core annual fund or entry-level supporters, based on thresholds set in your system). For each acquisition month, you'll see how many new donors you gained, how much they gave initially, how many came back to give again, and how much follow-on giving they produced in the three years after their first gift. The analysis calculates key fundraising metrics, including the number of first-time donors per month, their total and average first gift amounts, how many were retained for a second gift, and their average, median, and top donor value over the subsequent three years. The retention rate is shown as a percentage, helping you pinpoint which months attract donors more likely to stay engaged. The analysis also highlights the top-performing months for long-term value, not just immediate acquisition. You can use these insights to time campaigns, refine new donor welcome series, and focus stewardship efforts on the months that yield donors with the highest potential. For example, if donors acquired in September show higher three-year value and retention, you might invest more in acquisition during that month or replicate successful strategies used then. Development officers should review this analysis regularly, particularly after each fiscal year ends and ahead of key campaign planning periods, to ensure alignment between outreach and resource allocation. Annual giving managers and those overseeing donor journeys should utilize it to tailor follow-up tactics based on when donors first make a gift. To measure your success with this analysis, track improvements in first-year and three-year retention rates and the average subsequent giving amounts by acquisition month over time. You should also evaluate whether changes in campaign timing or messaging lead to increased donor lifetime value. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring your team continually adapts strategies to maximize both new donor growth and long-term fundraising results.

## QX59 First-Time Top Segment Donor Month Rankings (Last Fiscal Year) Analysis

*This analysis identifies which months are most successful for acquiring new donors who immediately begin giving at a top-tier level.*

First-Time Top Segment Donor Month Rankings (LFY) How to use the First-Time Top Segment Donor Month Rankings (LFY) analysis This analysis identifies, by month, first-time donors who joined your Top Giving Segment during the most recently completed fiscal year. It combines gift and donor data to reveal which months are strongest for acquiring high-value new donors, enabling you to pinpoint trends in successful acquisition efforts. By focusing on donors whose total giving in their first year met or exceeded your organization's Top  threshold (as defined in your Thresholds table), you can better understand when your highest-potential new relationships are forming. The data used includes each donor's first-ever gift, the timing of that gift, and their total giving within the last fiscal year. Key metrics are calculated for each month: the number of qualifying first-time Top  donors, the total and average first gift amounts, as well as median and mode values for those initial gifts. These metrics matter because they help you compare the quality and volume of high-value new donor acquisition month over month, offering a clear picture of seasonal patterns or the effectiveness of specific campaigns. You should use this analysis to inform both strategic planning and immediate action. For example, if certain months consistently yield more or larger first-time top donors, consider aligning future campaigns or special appeals with those periods. When the analysis is paired with supporting information about individual donors, such as acquisition channel or giving history (even if not shown in the core calculation), you can further tailor your outreach and stewardship efforts for greater personalization. Major gift officers and annual giving managers should regularly review this analysis together to coordinate on donor cultivation strategies, adjusting engagement tactics based on when high-capacity new donors are most likely to be acquired. Recommended as part of your Constituent Intelligence routines, schedule periodic reviews-ideally quarterly and after major campaigns- to detect shifts in donor behavior and ensure strategic agility. To measure success, track year-over-year changes in the number and value of first-time top donors per month, the effectiveness of campaign timing adjustments, and improvements in retention or subsequent giving from these high-value new donors. By leveraging these insights, you can more effectively focus your resources, strengthen relationships with your most promising new supporters, and maximize the long-term impact of your fundraising program.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational

## QX60 First-Time Middle Segment Donor Month Rankings (Last Fiscal Year) Analysis

*This analysis identifies which months are most successful for acquiring new donors who immediately begin giving at a solid mid-level.*

First-Time Middle Segment Donor Month Rankings (LFY) How to use the First-Time Middle Segment Donor Month Rankings (LFY) analysis This analysis identifies and ranks first-time donors who joined your organization in the last full fiscal year (LFY) and whose total giving for the year places them in the middle donor segment, based on your organization's custom giving thresholds. Drawing from historical gift data, it determines the month in which each donor made their very first gift and aggregates this information to show you, month by month, how many new middle-segment donors you acquired, the total and average value of their first gifts, and related statistics such as median and mode of first gift amount. By focusing on the middle segment-not the very largest or smallest donors-you gain targeted insight into a crucial group that often has strong future value and upgrade potential. The analysis uses the sum of each donor's giving during the most recent completed fiscal year to assign their segment, then groups and summarizes these new donors by the month of their first gift. Metrics provided include the number of new middle-segment donors acquired each month, the total and average size of their initial gifts, and trends in giving patterns. These figures matter because they indicate when your acquisition efforts are most effective and help you detect seasonal or campaign-driven spikes in quality donor acquisition. You should use this analysis to time stewardship efforts, inform campaign planning, and tailor your outreach. For example, knowing which months yield the most or highest-value first-time middle-segment donors allows you to prioritize engagement during those periods or to investigate the tactics that were in play during high-performing months. Development directors, annual giving managers, and constituent engagement teams should review this analysis together, especially when planning cultivation or upgrade initiatives. Pairing this data with individual donor profile data, such as donor scoring based on giving amount trends and/or frequency of giving from your Constituent Intelligence platform empowers you to craft more personalized outreach, as you'll know when and how a donor first engaged at a meaningful level and be able to see at a glance the recent trajectory of their giving history. To measure the success of applying this analysis, monitor increases in middle-segment donor retention and upgrades over time, as well as overall growth in new donor value during key acquisition periods. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you consistently identify trends and adapt your strategies for maximum fundraising effectiveness.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational

**Variant Family:** First-Time Donor Month Rankings (LFY) (segment variants)

## QX61 First-Time Bottom Segment Donor Month Rankings (Last Fiscal Year) Analysis

*This analysis (often used as a report) identifies which months are most successful for acquiring a high volume of new, entry-level donors.*

First-Time Bottom Segment Donor Month Rankings (LFY) How to use the First-Time Bottom Segment Donor Month Rankings (LFY) analysis This analysis helps you understand when, during the most recently completed fiscal year, you acquired new donors who gave amounts that place them in your bottom segment, based on your organization's defined giving threshold. By focusing on first-time donors whose total giving for the year falls below a specific cutoff, you can identify the times of year when entry-level donor acquisition is strongest and spot patterns that may inform your outreach strategies. The analysis draws on gift transaction data, fiscal year definitions, and your organization's bottom segment threshold to produce a monthly breakdown of first-time donor counts, total and average first gift amounts, and other key statistics such as median and mode of first gifts. You gain insight into both the volume and quality of entry-level donor acquisition by month, allowing you to see which periods are outperforming others and whether specific campaigns or initiatives are driving spikes in new donor counts. The inclusion of metrics such as average, median, and mode for first gift amounts allows you to assess whether your acquisition efforts are attracting donors at your expected giving level, or if adjustments to messaging, ask amounts, or channels are needed. While this analysis does not list individual donors, it provides a high-level view that is essential for segment strategy and annual planning. If you maintain or supplement this with a donor-level view, you can further personalize stewardship and identify high-potential prospects for future upgrades. You should use this analysis to time appeals more effectively, allocate acquisition resources to the most productive months, and benchmark your entry-level donor pipeline over multiple years. Development directors, annual giving managers, and anyone involved in donor acquisition or segmentation should review this analysis, especially as part of your regular Constituent Intelligence routines. Apply the findings by aligning campaign launches with high-performing months, setting realistic acquisition targets, and tailoring follow-up journeys to the typical first gift patterns. Monitor your success by tracking increases in first-time donor counts, improvements in average and median gift sizes, and year-over-year growth in retention rates among bottom-segment donors. By integrating these insights into your fundraising strategy, you can establish a stronger foundation of new supporters and lay the groundwork for future enhancements and long-term donor value.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational
**Segments:** Bottom, New | Scope: Segment

## QX62 5-Year Bottom Donor Acquisition Month Ranking Analysis

*This analysis (often used as a report) provides insight into the seasonality of your entry-level donor acquisition over the last five years.*

5-Year Bottom Donor Acquisition Month Ranking Analysis How to use the 5-Year Bottom Donor Acquisition Month Ranking Analysis analysis This analysis provides a clear, month-by-month breakdown of the number of new bottom segment donors your organization has acquired in each calendar month over the last five full fiscal years. By focusing on the acquisition month and segmenting by those whose total giving in their first year was at or below your defined bottom threshold, the analysis helps you understand both seasonality and acquisition patterns among your lowest-level new donors. The data is drawn from your full Gifts table, using each donor's first-ever gift date, their total giving in the acquisition fiscal year, and the segment threshold set in your Thresholds table. The core metric-the number of new bottom-segment donors acquired each month-gives you a granular view of the timing and volume of entry-level donor acquisition. This matters because it allows you to assess which months are most effective for engaging these donors and whether acquisition efforts align with periods of high or low giving propensity. Understanding these monthly trends is crucial for planning your outreach, budgeting campaign resources, and setting realistic acquisition goals. You can use this analysis to identify potential gaps or opportunities in your current acquisition strategy. For example, if certain months consistently yield fewer new donors at the bottom level, you might test new engagement tactics during those periods. Conversely, months with higher acquisition rates could be targeted for retention messaging or onboarding campaigns. This level of Constituent Intelligence enables more personalized stewardship and can inform when to launch appeals, events, or targeted communications for new donors. Fundraising and development directors should review this analysis, ideally at least twice a year, to adjust annual plans and monitor the impact of new acquisition initiatives. Annual giving managers and donor engagement staff can use the month-by-month insights to fine-tune campaign calendars, ensuring that acquisition and stewardship efforts are appropriately timed. To measure success, track changes in the monthly distribution of new bottom-segment donors over time and look for increases in both overall acquisition and conversion rates from bottom to higher giving segments. Additional success indicators include improved first-year retention rates for these cohorts and growth in lifetime value. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring your team remains agile and data-driven in donor acquisition and engagement strategies.

## QX70 All First Time Donors by Month in Last Fiscal Year Analysis

*This analysis (often delivered as a report) analyzes five years of acquisition data to reveal the seasonal rhythm of your fundraising program for first time donors*

All First Time Donors by Month in Last FY How to use the All First Time Donors by Month in Last 5FY analysis This analysis helps you identify and understand all new first-time donors acquired by your organization in each month over the last five completed fiscal years. Drawing on your Gifts data, it pinpoints the very first gift made by every constituent and groups new donors by the month and fiscal year of their initial contribution. For each new donor, it also calculates the total amount they gave during their acquisition fiscal year, allowing you to segment these donors into top, middle, and bottom tiers based on custom thresholds set by your team. By breaking down new donor acquisition by month, you can spot seasonal trends-such as spikes in giving during year-end campaigns or lulls over the summer-that inform both forecasting and campaign planning. The segment breakdown reveals not just how many new donors you acquired, but also the quality of these acquisitions in financial terms. This is particularly valuable for prioritizing follow-up: top-tier new donors may warrant immediate cultivation by major gift officers, while middle- and bottom-tier donors can be funneled into more scalable stewardship programs. If you include additional columns (such as donor contact details or engagement history), you can quickly personalize outreach and tailor messaging based on each donor's giving pattern and potential. The core metrics-monthly new donor counts and their segmentation by giving level-are essential for measuring the effectiveness of your acquisition efforts. They also enable you to benchmark the health of your donor pipeline and adjust your strategies in real-time. For example, if you notice a decline in top-tier donor acquisition in a particular month, you can investigate and address campaign or outreach gaps promptly. Development directors, annual giving managers, and donor relations staff should review this analysis regularly, ideally as part of your Constituent Intelligence routines. Use the insights to time appeals, allocate stewardship resources, and set internal targets for both the quantity and quality of new donor acquisition. Consider assigning follow-up tasks based on the segment breakdown to ensure top prospects receive the appropriate attention. To measure your success with this analysis, track improvements in retention and upgrade rates among each cohort of new donors, monitor the growth of each segment over time, and assess whether you are meeting strategic acquisition goals by month and by donor tier. Regular use will help you move from reactive to proactive donor engagement, strengthening your pipeline and enhancing long-term fundraising outcomes.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational

→ Also Try: QX74 First Time Donors by Month and Retention

## QX72 Middle First Time Donors by Month in Last Fiscal Year Analysis

*This analysis (often a report) analyzes five years of acquisition data to reveal the seasonal rhythm of your fundraising program for middle donors*

Middle First Time Donors by Month in Last FY How to use the Middle First Time Donors by Month in the Last FY-Replace Duplicate analysis This analysis helps you identify and understand middle-tier first-time donors who made their initial gift during the most recently completed fiscal year, grouping them by the month of their first donation. It draws on your Gifts and Thresholds tables to dynamically define what counts as a "middle" donor, based on your organization's segmentation criteria. By isolating only those whose first gift falls within your middle giving range, you can focus on a particularly valuable cohort—those who have the potential to become reliable annual supporters but are not yet at the top level of annual giving. For each month in the last fiscal year, you see how many middle-tier first-time donors you acquired, along with the total, average, median, and modal (most frequent) first gift amounts. This allows you to quickly spot trends, such as which months are strongest for acquiring mid-level donors, or whether your appeal messaging is yielding higher initial gifts. You can also compare the distribution of gift sizes to inform your next-round stewardship strategies. You should use this analysis to inform both annual planning and in-year tactical adjustments. For instance, if you notice that certain months consistently yield more or higher-value middle-tier first-time donors, you can time appeals or special campaigns to amplify those trends. Conversely, months with lower acquisition can be targeted for new outreach experiments. Reviewing these patterns enables you to refine your messaging and stewardship plans, ensuring that new middle-tier donors feel recognized and motivated to renew or upgrade. Development directors, annual fund managers, and constituent intelligence leads should regularly review this analysis, especially as part of their Constituent Intelligence routines, to track acquisition performance and adjust tactics before patterns become entrenched. You may also want to share monthly findings with major gift officers or stewardship teams to support more personalized follow-ups, leveraging the summary statistics to tailor your thank-you messages or upgrade requests. To measure the success of using this analysis, monitor growth in the number and value of middle-tier first-time donors year over year, the conversion rate of these donors to second-year gifts, and any improvements in average or median first gift size. By systematically applying these insights, you can strengthen your donor pipeline and maximize long-term fundraising effectiveness.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational
**Segments:** Middle, New | Scope: Segment
**Variant Family:** First-Time Donors by Month (LFY) (segment variants)

## QX73 Bottom First Time Donors by Month in Last Fiscal Year Analysis

*This analysis analyzes five years of acquisition data to reveal the seasonal rhythm of your fundraising program for bottom donors*

Bottom First Time Donors by Month in Last FY How to use the Bottom First Time Donors by Month in Last FY -Replace Duplicate analysis This analysis identifies and summarizes first-time donors whose initial gifts fell within your organization's lowest giving segment (bottom tier) during the most recently completed fiscal year. Drawing from your Gifts and Thresholds tables, the analysis filters out constituents whose first-ever donation was at or below the bottom threshold, as defined in your Constituent Intelligence framework. It organizes these donors by the month of acquisition, showing you, for each month, the total number of new donors in this segment, along with their collective gift value, average first gift, median, and mode. This helps you see not only how many new bottom-tier supporters you attracted each month, but also the typical size of their initial contribution. You can use this analysis to pinpoint seasonal trends in bottom-tier donor acquisition and identify which months are most successful in attracting new entry-level supporters. The summary statistics-total, average, median, and mode of first gifts-give you a fuller picture of donor giving patterns, which can inform your outreach and stewardship strategies. By understanding when and how these donors are acquired, you can better tailor appeals, welcome series, and engagement efforts, increasing the likelihood of retaining and upgrading them over time. Development directors, annual giving managers, and donor engagement staff should review this analysis on a monthly or quarterly basis, ideally as part of their Constituent Intelligence routines. Use it to identify months that may require additional acquisition efforts, or to celebrate successful campaigns that generated more first-time donors. For example, if you notice a spike in one month, investigate what drove that success and consider replicating those tactics in other periods. If certain months consistently lag, consider experimenting with new outreach or event timing. Additionally, use these insights to personalize stewardship: knowing the typical gift size and acquisition month helps you craft relevant thank-you messages or targeted upgrade asks. To measure success, track key metrics such as increases in first-time donor counts, growth in average gift size over time, and improvements in retention or conversion rates among the bottom-tier segment. Ultimately, effective use of this analysis should lead to more engaged new donors and a stronger foundation for long-term fundraising growth.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational
**Segments:** Bottom, New | Scope: Segment
**Variant Family:** First-Time Donors by Month (LFY) (segment variants)

## QX74 First Time Donors by Month and Retention Over Last 3 Fiscal Year Analysis

*This analysis analyzes the second-year giving behavior of new donors, revealing how their acquisition month impacts their overall retention.*

First Time Donors by Month and Retention Over Last 3 FY How to use the First Time Donors by Month and Retention Over Last 3 FY analysis This analysis identifies and tracks first-time donors by acquisition month over the last three fiscal years, showing not just how many new donors you are acquiring, but also how well you are retaining them into their second year of giving. By examining gift data-including donor IDs, gift dates, amounts, and annual totals-it highlights patterns in donor acquisition and retention that are essential for understanding the effectiveness of your fundraising strategies. T You will see, for each acquisition month, the number of first-time donors, their average first gift amount, and their average total giving during their first year. For those with enough data history, it also reports average giving in the second year, the percentage retained into the next fiscal year, and the percentage who give again in the same month they were acquired ( anniversary retention). These metrics are crucial for measuring both the immediate and long-term value of new donor cohorts, helping you identify which months or campaigns drive not only acquisition but also strong retention and future giving. The analysis enables you to spot seasonal trends, optimize campaign timing, and tailor stewardship efforts. For example, a spike in first-time donors in December with low second-year retention signals a need for more targeted follow-up with year-end donors. The anniversary retention rate can help guide the design of timely engagement strategies, such as personalized reminders or special outreach during the month a donor first made a gift. This data can also be used to inform your understanding of whether specific campaigns or appeals delivered in a given month were more effective than others and should be replicated in the future. Fundraising directors, annual giving managers, and donor stewardship staff should review this analysis regularly as part of their Constituent Intelligence routines. Use the insights to refine acquisition campaigns, test new stewardship approaches for recently acquired donors, and allocate resources toward months or segments with the highest long-term return. Consider tracking improvement in second-year retention rates and average donor value over time as your measures of success, aiming to increase both the number and quality of retained new donors. Ultimately, leveraging this analysis will help you build more sustainable donor relationships and drive growth in your fundraising program.

**Type:** Cohort | Lifecycle: Acquisition, Retention | Time: Retrospective | Audience: Operational

## 1.5: Donor Lifecycle Analysis

## QX24 Middle Donor Retention by Frequency Analysis

*This analysis (often used as a report) analyzes how a mid-level donor's giving frequency in one year impacts their likelihood of being retained the next year.*

Middle Donor Retention by Frequency How to use the Middle Donor Retention by Frequency analysis This analysis enables you to understand how effectively your organization retains middle-tier donors year over year, segmented by the frequency of their giving within each fiscal year. It uses data from your gifts table, classifying donors with annual giving totals within your defined "middle donor" range (sourced from your Thresholds table) and grouping them by giving frequency, ranging from one gift per year (Annual), to two or three (Semi-Annual), up to ten or more (Monthly+). For each fiscal year, it tracks whether these middle donors gave again at the same level in the following year, and notes if their giving frequency changed. You will find not only the number of donors in each frequency segment who were retained, but also the percentage retained, their average giving in the base year, and the amount retained donors gave in the following year. The analysis highlights "frequency changers," indicating how many donors adjusted their giving cadence, which is crucial for identifying shifts in donor behavior. By comparing retention and changes across years and frequencies, you can locate which engagement strategies are most effective for sustaining or increasing donor involvement. You can use this analysis to prioritize outreach and stewardship for segments where retention is strong or needs improvement, and to tailor messaging for donors whose giving patterns suggest they are ready to increase their commitment. For example, if you see that Quarterly givers have high retention but Semi-Annual givers often lapse or downgrade, you might introduce targeted cultivation efforts or personalized touchpoints to encourage more frequent giving. If available, reviewing columns such as first and last gift dates or average gift size will help you craft more customized outreach, such as referencing a donor's giving anniversary or typical gift amount. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ideally by your development director, annual giving manager, and donor stewardship teams. Use these insights to set retention benchmarks, design targeted campaigns, and experiment with tailored stewardship for each frequency segment. Track your progress by measuring year-over-year changes in retention rates, the proportion of donors upgrading frequency, and growth in average giving among middle donors. Success is reflected in higher retention percentages, more donors increasing their frequency of support, and steady or growing average gift sizes within this critical segment.

**Type:** Cohort | Lifecycle: Retention | Time: Retrospective | Audience: Operational
**Segments:** Middle | Scope: Segment
→ Also Try: QX166 Middle Segment Donor Loyalty Analysis; QX95 Stable Middle Donors to Target for Incre

## QX27 Bottom Donor Sustained Giving Analysis

*This analysis reveals the long-term value of your small-dollar donor program by tracking how many of these donors become loyal, sustained supporters.*

Bottom Donor Sustained Giving How to use the Bottom Donors to Sustained Givers (Multiple Gifts/Years) Cohort Analysis analysis This analysis tracks donors who began their relationship with your organization at lower gift levels and monitors their journey toward sustained engagement, focusing on those who have given multiple gifts over multiple years. By analyzing all donors who made an initial bottom-tier gift (using a threshold derived from your organization's Monetary segmentation analysis), you can uncover which segments of these donors have become consistent supporters, upgraded their giving, or lapsed. The analysis uses gift data linked with constituent records, filtering out deceased donors to ensure you're evaluating only active supporter histories. It calculates critical indicators like total gifts, number of fiscal years with giving, lifetime giving, tenure, and recent giving activity, each helping you understand the depth of donor commitment and recency. You'll see donors grouped by their fiscal year of acquisition, with metrics such as how many converted to sustained multi-year giving, how many have upgraded to mid-level giving, and the rates for each cohort over time. These calculations allow you to identify patterns in donor retention and upgrade, pinpointing which acquisition years or strategies have yielded the best long-term results. Metrics like average gifts, lifetime giving, and tenure for sustained donors are especially valuable for forecasting donor value and refining your stewardship approach. You should leverage this analysis to identify which donor cohorts are most promising for further cultivation and which require re-engagement strategies. Fundraising directors and development officers should review this analysis regularly, particularly after key campaigns and at the end of the fiscal year, to refine retention and upgrade strategies. Donor engagement teams can use the findings to prioritize outreach to those at risk of lapsing or those who are ripe for an upgrade ask. It's recommended to review this analysis periodically as part of your Constituent Intelligence routines, ensuring your strategies remain responsive to trends. You can measure success by tracking increases in conversion rates of bottom donors to sustained givers, upgrades to higher giving levels, and improvements in donor tenure and lifetime value. Monitoring these metrics over multiple periods will help you assess the impact of your stewardship and engagement strategies, ensuring you re maximizing donor potential and deepening relationships over time.

**Type:** Cohort | Lifecycle: Acquisition, Growth/Upgrade | Time: Retrospective | Audience: Operational
**Segments:** Bottom | Scope: Organization, Segment
→ Also Try: QX28 Bottom Donor Early Warning Summary; QX81 Bottom Donor Early Warning -Donor Action; QX96 Bottom Segment Upgrade Prospect List

## QX141 Transition Probabilities by Donor Tenure Analysis

*This is a powerful, multi-dimensional report that uncovers how donor behavior evolves over time.*

Transition Probabilities by Donor Tenure How to use the Transition Probabilities by Donor Tenure analysis This analysis enables you to understand how donors move between giving levels (segments) from year to year, organized by how long they've supported your organization. It draws on your gift transaction history, assessing each donor's giving segment-Top, Middle, or Bottom-based on their annual contributions, and tracks their progression or attrition across fiscal years. By examining the tenure of each donor, it places them into distinct bands: Newer (0-2 years), Developing (3-5 years), and Established (6+ years), so you can see how donor behavior changes as their relationship with your nonprofit matures. The key insight provided is the probability of donors moving up, down, staying steady, or lapsing out of giving, broken down by both their starting segment and tenure band. For each group, you see what percentage advanced to a higher segment, stayed within their segment, slipped to a lower one, or stopped giving. These transition rates are crucial for forecasting revenue, setting stewardship priorities, and identifying both risk and opportunity within your file. You should use this analysis to inform tailored engagement strategies. For example, if you notice that developing donors in the Middle segment have a high probability of lapsing, you can prioritize targeted stewardship for them. Conversely, if newer donors show promising upward mobility, you might consider investing in early cultivation programs. Reviewing this analysis periodically as part of your Constituent Intelligence routines helps you spot emerging trends and intervene early. Annual giving managers, major gifts officers, and anyone responsible for donor retention or pipeline development should review this analysis. Use the insights to segment your portfolios, set intervention thresholds, and design communications that reflect a donor's stage in their journey. For example, plan re-engagement campaigns for tenure bands with high lapse rates, or develop upgrade messaging where upward transitions are common. Measure your success by tracking improvements in retention rates, increases in donors upgrading segments, and reductions in lapsed donors within priority tenure bands. Over time, you can expect to see more effective stewardship, stronger donor pipelines, and a measurable increase in annual revenue sustainability as a result of applying these insights.

## QX163 Segment Migration Summary (First 5 Years)

*This analysis looks at how donors acquired in specific fiscal years migrate between giving segments ('Top', 'Middle', 'Bottom', or 'Lapsed') during the first five years following their initial gift.*

This analysis examines how donors acquired during specific fiscal years transition between giving segments-'Top', 'Middle', 'Bottom', or 'Lapsed'-over the first five years following their initial gift. It utilizes data from your donor database, specifically focusing on gift amounts and dates to categorize donors into different segments based on their giving behavior. By tracking the migration of these donors, you can gain insights into donor retention and engagement trends, which are crucial for optimizing fundraising strategies. The analysis calculates the initial segment for each donor based on their cumulative giving within their first year and then tracks their segment status for the subsequent four years. Key metrics include the percentage of donors who remain in or move between segments year-over-year. For example, understanding how many donors from the 'Top' segment remain in that category versus those who lapse can inform your engagement strategies and retention efforts. This analysis holds significant strategic value. By identifying trends in donor migration, you can tailor your communication strategies to better engage each segment. For instance, if a high percentage of 'Top' donors are moving to 'Lapsed', it may be time to implement targeted re-engagement campaigns. Conversely, if 'Bottom' donors are frequently moving to 'Middle', you can focus on nurturing those relationships to encourage further giving. To maximize the benefits of this analysis, consider running it annually after the close of your fiscal year. It should be reviewed by fundraising directors and development officers who can translate the findings into actionable engagement plans. Use the insights to create segmented outreach strategies based on donor behavior, which can improve overall retention rates. Success measures for evaluating the impact of utilizing this analysis include tracking changes in donor retention rates over time, monitoring the growth of each segment, and assessing the effectiveness of targeted engagement campaigns. Additionally, you can measure the average gift size and frequency of donations from each segment to ensure that your strategies are leading to increased financial support for your organization. By continuously applying these insights, you can foster stronger relationships with your donors and enhance your fundraising effectiveness.

# 1.6: Cohort Analysis by Year and Month

## QX23 Average Time to Top Level Donor -First Gift Cohort Analysis

*This analysis (often used as a report) analyzes how many new donors from each year eventually become major supporters.*

Average Time to Top Level Donor -First Gift Cohort Analysis How to use the Average Time to Top Level Donor -First Gift Cohort Analysis analysis This analysis helps you understand how long it takes for new donors to become top-level donors, segmented by the fiscal year of their very first gift. It utilizes your organization's gift and constituent data, specifically tracking every donor's first recorded donation and then identifying when (if ever) that donor makes their first top-level gift, based on your custom giving thresholds. By calculating the number of years between these two milestones for all donors who reach the top giving level, you gain insight into how quickly your pipeline develops high-value supporters and how that pace may be changing over time. The analysis presents several key metrics for each first-gift cohort, including the number of donors who converted to top-level status, the average and median years it took to convert, and the range from the fastest to the slowest conversions. It also displays the average size of first gifts and first top-level gifts, as well as the number of donors who achieved top status within 1, 3, or 5 years. These metrics are crucial for monitoring the effectiveness of your engagement strategies and for benchmarking progress across different fiscal years. You can use this analysis to identify which cohorts are progressing most rapidly, spot periods when conversion speeds lagged, and assess the impact of stewardship efforts or campaign changes. For example, if you see that recent first-gift cohorts are taking longer to reach top-level status compared to earlier years, it may signal the need to revisit your cultivation or upgrade strategies. Alternatively, a spike in rapid conversions can reveal successful tactics worth replicating. Development directors, major gifts officers, and donor engagement managers should regularly review this analysis. Use the insights to prioritize outreach to donors who are approaching the average conversion window, tailor stewardship plans for new donors based on historical patterns, and set realistic goals for pipeline development. Consider segmenting follow-up strategies for donors who convert quickly versus those who take longer, using the accompanying metrics to personalize your approach. To measure success, track whether the average and median time to top-level giving decreases over time, monitor increases in the number of conversions per cohort, and assess improvements in early identification and engagement of high-potential donors. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you continuously refine your strategies for donor development and maximize the long-term value of your donor base.

## QX51 First-Time Top Donors (10yr) Annual Analysis

*This analysis (often used as a report) analyzes the long-term retention and value of your most impactful new supporters, top or major level donors.*

First-Time Top Donors (10yr) Annual Analysis How to use the First-Time Top Donors (10yr) Annual Analysis analysis This analysis identifies and examines the annual cohorts of your organization's first-time top donors over the past decade, enabling you to monitor trends and outcomes for your most valuable new supporters. Drawing on your core giving data, it filters for first gifts that meet your top donor threshold (as set in your segment thresholds table) and calculates each donor's first gift date, amount, and subsequent multi-year giving and retention. By following these donors from their initial gift, you gain crucial Constituent Intelligence on how effectively you cultivate and retain high-potential new supporters. Key metrics include the total number of first-time top donors by fiscal year, their aggregate and average first gifts, median first gift size, and the largest new donor gift each year. Most importantly, the analysis tracks how many of these donors are retained in the first, next three, or any future fiscal years, showing both raw counts and retention rates. It also measures the amount retained donors contribute in the three years after joining, highlighting the average, median, and top subsequent giving. These metrics help you assess donor onboarding effectiveness, identify trends in donor loyalty, and spot opportunities to improve stewardship. Use this analysis to identify which acquisition years yielded the strongest top donor relationships and to evaluate the medium-term value and retention of these key donors. For example, if retention rates or follow-on giving values decline in recent years, it may signal the need to revisit your welcome strategies or engagement touchpoints. The detailed breakdown by acquisition year helps you customize outreach-whether you want to re-engage lapsed top donors from specific years or recognize and upgrade loyal ones. Development directors, major gifts officers, and stewardship managers should review this analysis, ideally at least annually, as part of their Constituent Intelligence routines. Apply the insights to refine your new donor onboarding, set segment-specific retention goals, and proactively manage relationships with your most promising new supporters. Consider tracking improvements in first-year and three-year retention rates, as well as growth in three-year follow-on giving, as measures of success in acting on this analysis. Ultimately, leveraging these insights should help you grow long-term donor value, increase top donor retention, and strengthen your organization's fundraising pipeline.

**Type:** Cohort | Lifecycle: Acquisition, Retention | Time: Retrospective (Multi-Year) | Audience: Operational

## QX52 First-Time Middle Donors (10yr) Annual Analysis

*This analysis (often used as a report) analyzes the long-term retention and value of your most important Middle Segment "pipeline" supporters.*

First-Time Middle Donors (10yr) Annual Analysis How to use the First-Time Middle Donors (10yr) Annual Analysis analysis This analysis enables you to systematically track, evaluate, and act on trends among your first-time middle-tier donors over the past decade, empowering more effective fundraising strategies and deeper Constituent Intelligence. Drawing directly from your gift and threshold data, it identifies all new donors whose initial contribution fell within your organization's middle gift range (as defined in your Thresholds table). It organizes them by their year of acquisition, based on your fiscal calendar. You ll find annualized insights into the volume and value of new middle-tier donors, including their initial gift sizes (total, average, median, and largest) and, crucially, their retention and giving behavior in the years following their first gift. Retention metrics are broken out for the following fiscal year, across three years, and at any point in the future, allowing you to benchmark your donor stewardship efforts over short and longer time horizons. The analysis also calculates the total amount these donors give during their first three years, both on average and at the top end, providing a powerful view of early donor lifetime value. These insights matter because first-time middle donors often have higher long-term value potential than entry-level or occasional donors, but are not yet part of your major gift pipeline. By understanding their giving and retention patterns, you can tailor engagement, stewardship, and upgrade strategies to maximize both retention and total giving. If the analysis includes underlying donor-level detail (such as acquisition year, first gift amount, and subsequent giving), you can use these data points to craft more personalized outreach-referencing the donor s giving journey or highlighting milestones in your communications. You should review this analysis regularly, at a minimum annually, and ideally quarterly, as part of your Constituent Intelligence routines. Development directors, annual fund managers, and donor relations staff should pay special attention to years where retention or three-year value dips, since these signal areas for targeted stewardship or re-engagement. Prioritize outreach to recent first-time middle donors who have not yet made a second gift, and create special cultivation tracks for those exceeding the average three-year value. To gauge your success, track improvements in next-year retention rates, growth in three-year value per new donor, and overall increases in the number of first-time middle donors. Ultimately, utilizing these insights effectively should lead to stronger donor relationships, a more robust mid-level giving pipeline, and increased fundraising stability.

**Type:** Cohort | Lifecycle: Acquisition, Retention | Time: Retrospective (Multi-Year) | Audience: Operational

## QX53 First-Time Bottom Donors (10yr) Annual Analysis

*This analysis (often used as a report) analyzes the long-term retention and value of donors whose first gift was a small gift.*

First-Time Bottom Donors (10yr) Annual Analysis How to use the First-Time Bottom Donors (10yr) Annual Analysis analysis This analysis gives you a comprehensive year-by-year view of first-time donors who made gifts at or below your organization's bottom segment threshold over the past ten fiscal years. Leveraging key data from your Gifts and Thresholds tables, it identifies new donors in the lowest giving tier, tracks their subsequent giving over a three-year period, and measures how many continue their support in future fiscal years. The analysis applies your organization's custom segmentation, ensuring that only donors qualifying as bottom-based on your own thresholds are included. You gain insight into critical metrics, such as the number of first-time bottom donors acquired each year, the total and average size of their first gifts, and the percentage retained in subsequent years. The analysis also calculates retention rates for the next fiscal year, the following three fiscal years, and any future year, providing a clear picture of your pipeline's health. Additionally, it measures the value of these donors' giving over the three years after their first gift, both as an average and a median, to help you forecast long-term revenue potential from this segment. The largest three-year donor value is also included, highlighting outliers who may be candidates for further cultivation. By focusing on bottom-tier new donors, you can identify trends in acquisition and retention, assess the effectiveness of your introductory stewardship efforts, and spot fluctuations that may be linked to specific campaigns or external factors. This analysis is especially valuable for annual giving and Constituent Intelligence teams seeking to enhance the first-year experiences and long-term value of new, lower-level supporters. You should schedule this analysis to be reviewed periodically as part of your Constituent Intelligence routines. Development directors, annual giving managers, and stewardship coordinators will benefit most from reviewing these insights together. Use the results to target at-risk new donors for additional outreach, refine your welcome and upgrade strategies, and benchmark performance over time. Consider personalizing follow-up with those who have increased their giving in the three-year window, as well as recognizing and re-engaging lapsed donors who once showed longer-term potential. To measure success, track changes in first-year and three-year retention rates, growth in three-year donor value, and improvements in the number of first-time donors moving up from the bottom segment. Improved metrics in these areas will signal that your strategies are effectively nurturing and upgrading your entry-level supporters.

**Type:** Cohort | Lifecycle: Acquisition, Retention | Time: Retrospective (Multi-Year) | Audience: Operational
**Segments:** Bottom, New | Scope: Segment
**Variant Family:** First-Time Donors (10yr) Annual Analysis (segment variants)

## QX57 First-Time All Donors (10 year) Annual Analysis

*This report provides a high-level, historical report of your new donor acquisition program, tracking the long-term retention and value of new donors.*

First-Time All Donors (10 yr) Annual Analysis How to use the First-Time All Donors (10 yr) Annual Analysis analysis This analysis provides a comprehensive view of your first-time donors acquired within each of the last ten fiscal years, tracking their giving behavior and retention over time. Drawing from your Gifts data, it identifies each donor's initial contribution. It follows their subsequent giving activity, allowing you to measure not only the size of the new donor pool each year but also how well you retain and grow these relationships. You'll see annual counts of new donors, total and average first gift amounts, and the largest first gifts, offering quick insight into the scale and quality of donor acquisition efforts. More importantly, the analysis calculates the number and percentage of these first-time donors who make repeat gifts in the next fiscal year, within three years, or in any future year. Retention rates for each period are provided, highlighting both immediate engagement success and longer-term loyalty. Additionally, it measures the cumulative value of further gifts made by first-time donors over their first three years, segmented both per retained donor and averaged across the entire new donor cohort. This helps you quantify the actual lifetime value of new donor acquisition, a core component of effective fundraising strategy. By tracking these metrics over ten years, you can identify trends-such as improving or declining retention, shifts in initial gift size, and the evolving value of new donor cohorts. This enables you to evaluate the impact of past campaigns and stewardship practices, refining your approach to maximize future returns. As part of your Constituent Intelligence routines, periodically review this analysis, ideally at least annually, to inform strategy and resource allocation. Fundraising directors, annual giving managers, and stewardship teams should utilize these insights to evaluate acquisition channels, prioritize retention efforts, and identify cohorts that require renewed engagement. For example, if three-year value or retention is declining, you might revisit your welcome series or stewardship touches for new donors. If certain years show exceptional results, examine what differentiated your outreach or campaign tactics in those periods. To measure success, track improvements in first-year and multi-year retention rates, increases in average subsequent giving, and growth in overall donor lifetime value. If your outreach becomes more personalized, monitor changes in donor engagement and response rates to further refine your Constituent Intelligence strategies.

**Type:** Cohort | Lifecycle: Acquisition, Retention | Time: Retrospective (Multi-Year) | Audience: Operational

## QX160 Lifetime Value (LTV) by Acquisition Cohort and Initial Segment

*This query calculates the lifetime value (LTV) of donors, segmented by their acquisition fiscal year and their giving level in that initial year. It also includes metrics about the cohort's activity in the LFY and the average/median number of years they gave after acquisition.*

This analysis calculates the lifetime value (LTV) of donors based on their acquisition fiscal year and initial giving segment. It uses data from your organization's donor database, specifically focusing on gift amounts and dates. By segmenting donors according to their giving level in their first year, this analysis helps identify patterns in donor behavior and their long-term value to your organization. Key metrics include average and median lifetime value, total lifetime value from each cohort, and the percentage of each cohort that remained active in the last full fiscal year. Additionally, it tracks the average and median number of subsequent giving years, which shows how many years donors continued to give after their initial contribution. These insights are crucial because they not only highlight the financial contributions of different donor segments, but also indicate the effectiveness of your engagement strategies over time. You can use this analysis to inform strategic decisions on fundraising efforts and donor relationship management. For instance, if you notice that donors from a particular acquisition year have a higher lifetime value, you might prioritize targeted communications or campaigns aimed at nurturing relationships within that cohort. Understanding which segments yield the best long-term value can also guide resource allocation for donor outreach and retention initiatives. I recommend running this analysis annually or biannually to stay up to date on donor trends and behaviors. Development officers and fundraising directors should review the findings to adjust engagement strategies accordingly. For actionable application, consider focusing on cohorts with lower activity rates in the last fiscal year; develop tailored re-engagement strategies to rekindle their interest and support. To measure the success of applying insights from this analysis, track the retention rates and average giving amounts of the re-engaged cohorts over subsequent years. Also, monitor changes in the lifetime value of newly acquired donors as you implement new strategies. Over time, you should see a positive shift in donor retention and overall contributions, providing evidence of your data-driven fundraising approach's effectiveness.

### QX165 Top First Time Donors by Month is Last FY

*This analytic helps identify which months were most productive in terms of securing first-time Top Segment Donors*

This analysis focuses on identifying the months during the last full fiscal year when your organization successfully secured first-time top-tier donors. It leverages data regarding donor gifts, specifically looking at the first gifts made by new donors and filtering these based on their monetary value, ensuring they meet the threshold for top segment donations. The analysis uses several data sources: it references a table of thresholds that define what constitutes a top donor and incorporates a fiscal year parameter based on your organization's July to June calendar. It identifies first-time gifts through a method that ensures only the earliest donation per donor is considered, which is crucial for understanding when new relationships were initiated. Key metrics generated from this data include the number of first-time donors, total and average gift amounts, median gift, and the mode of the first gift amounts. Understanding these metrics is essential for evaluating the effectiveness of your fundraising efforts. The number of first-time donors indicates how well your acquisition strategies are performing, while the total and average first gift amounts reveal the financial impact of these new relationships. The median and mode provide additional insights into the giving behaviors of this segment, helping you tailor your engagement strategies. You can use this analysis strategically to inform your donor engagement efforts. By identifying the most productive months for acquiring new top-tier donors, you can focus your fundraising campaigns during those times. This insight allows you to optimize your outreach and engagement strategies, ensuring you are prepared to follow up with new donors effectively and nurture these relationships. It is advisable to run this analysis at the end of each fiscal year as part of your annual review process. Development officers and fundraising directors should review the findings to adjust strategies for donor acquisition and retention. Additionally, consider integrating these insights into your fundraising planning sessions to align efforts with proven successful periods. To measure the success of utilizing this analysis, track the retention rates of first-time donors acquired during the identified peak months over the following year. Also, monitor any increases in average gift amounts from these donors in subsequent years. Finally, evaluate whether targeted engagement strategies lead to higher conversion rates from first-time donations to repeat giving. By establishing these metrics, you can assess the long-term impact of your fundraising strategies informed by this analysis.

## 1.7: Tenure & Lifetime Value (LTV) Analysis

## QX47 Occasional (3 of 5 years) Donor Analysis by Segment

*This analysis provides a high-level, strategic summary of your "occasional donors those who give consistently, but not every single year.*

Occasional (3 of 5 yrs) Donor Analysis by Segment How to use the Occasional (3 of 5 yrs) Donor Analysis by Segment analysis This analysis helps you identify donors who have given in exactly three of the last five fiscal years-what you might call "occasional" donors-and segments them based on their giving levels. By drawing from your Gifts and Constituents data, it tracks each donor's giving across the most recent five-year span, then groups these occasional donors into Top, Middle, or Bottom segments according to their average annual giving, using customizable thresholds. Supporting information, such as lifetime giving value, number of years they've given, total gifts, and giving in the most recent fiscal year, is included to help you understand each donor's overall relationship with your organization. You gain a focused view of a donor group that's engaged but not fully retained year over year, providing a crucial window for strategic outreach. The analysis reveals the number of occasional donors in each segment, their average and median annual giving amounts, the frequency of their donations when active, and how their giving this past year compares to previous years. Knowing which donors fall into Top, Middle, or Bottom segments allows you to tailor your stewardship and upgrade strategies, and the additional metrics, such as average gift size and lifetime value, help you personalize your communications and appeals. You should use this analysis to prioritize re-engagement campaigns, especially for high-potential donors in the Top and Middle segments who could be cultivated into more consistent supporters. For major gifts officers and annual fund managers, this set of insights supports more strategic moves management by highlighting donors with significant capacity or lapsed engagement patterns. It is recommended that this analysis be reviewed periodically as part of your Constituent Intelligence routines, particularly following year-end or campaign cycles, so that you can adjust your outreach plans in real time. Reviewing this analysis is especially valuable for those responsible for donor retention, annual giving, and upgrade strategies. Development directors and stewardship coordinators can use these insights to craft more targeted appeals, set segment-specific goals, and test tailored cultivation approaches. To measure success, track increases in donor retention rates among this group, growth in average annual giving, and the conversion of occasional donors into more consistent or higher-level supporters over time.

## QX80 Summary Analysis of $1MM Threshold Donors

*This analysis provides a profile of these top donors by analyzing the average time, number of gifts, and key donation amounts get to $1 Million in giving.*

Summary Analysis of $1MM Threshold Donors How to use the Summary Analysis of $1MM Threshold Donors analysis This analysis provides a strategic, data-driven overview of donors who have reached the $1 million cumulative giving milestone, drawing on your gift and constituent records to pinpoint not only who these major donors are but also when and how they crossed this critical threshold. By examining all historical gifts for each donor and calculating the exact gift that brought them over the $ 1 million mark, you gain a nuanced view into both the pace and pattern of their philanthropy. The analysis aggregates key metrics, including the average and median number of months it took donors to reach $ 1 million, the typical number of gifts required, the amount just before and after crossing the threshold, and the size of the threshold-crossing gift itself. These insights help you understand the typical journey of your top-tier donors and highlight outliers who might warrant special attention. The underlying data includes not just basic donor identifiers, but also their first gift date, the timing and size of each gift, and their current lifetime giving totals. This means you can segment your $ 1 million+ donors by speed of giving, gift frequency, or average gift size, allowing you to tailor engagement strategies and stewardship plans more precisely. The analysis also reveals supporting columns, such as Gifts Before Threshold and Largest Gift Amount, which, although not central to the summary calculation, are invaluable for crafting personalized outreach, recognizing milestones, and benchmarking donor progression for major gift officers. You should use these summary metrics to set realistic expectations for new prospect pipelines, inform board reporting, and identify high-potential donors who are accelerating toward a $ 1 million goal. For best results, development directors, stewardship managers, and major gifts teams should review this analysis together. You might, for example, flag donors who cross the threshold unusually quickly for targeted cultivation, or adapt stewardship plans for those with high average gift amounts but slower progression rates. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring your strategies remain informed by the latest donor trajectories. Success can be measured by tracking the number of $ 1 million+ donors year over year, reducing the average time to threshold for new major donors, and increasing the retention and upgrade rates of those who approach or surpass this milestone. Applying these insights will help you build more authentic relationships, maximize lifetime value, and refine your overall major gifts strategy.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational

→ See Summary: QX9 $1MM Threshold Analysis

## QX149 Multi-year Donor Upgrade Analysis

*This analytic examines how many donors have historically upgraded their annual giving total (25% or more higher than their initial year) and the timeframes before those upgrades happened.*

This analysis examines the behavior of multi-year donors who have increased their annual giving by at least 20% compared to their initial year. It utilizes data on donor gifts over fiscal years, segment thresholds for different donor levels, and tracks the time it takes for upgrades to occur. By defining segments such as "Top," "Middle," and "Bottom" based on their first-year contributions, the analysis provides insights into how these groups evolve over time and the characteristics of donors who upgrade their giving. Key metrics include the percentage of donors who upgrade, the average and median years to upgrade, and the average upgrade percentage. The analysis also looks at whether these upgrades result in a change of segment. These metrics are crucial because they highlight not only the frequency of upgrades but also the potential for donors to shift into higher-giving categories, which can significantly impact your fundraising strategy. You can leverage this analysis to make informed decisions about donor engagement and cultivation strategies. For instance, understanding how long it typically takes donors to upgrade can help you time your outreach efforts effectively, ensuring you maintain engagement without overwhelming them. Knowing the percentage of donors who switch segments upon upgrading can help you tailor your communications to different donor segments, thereby increasing the likelihood of sustained giving. To maximize its effectiveness, consider running this analysis annually, ideally after the fiscal year closes, to capture a full year of giving data. This timing allows you to assess the most recent donor behaviors and refine your engagement strategies. The fundraising and development teams should review the findings collaboratively to discuss actionable steps based on donor behavior trends. You should also consider tracking success metrics such as increases in donor retention rates and growth in contributions from upgraded donors. Monitoring these outcomes will help you evaluate the effectiveness of your engagement strategies and make adjustments as needed. By focusing on multi-year donors and understanding their upgrade patterns, you can foster stronger relationships and encourage higher levels of giving over time.

**Type:** Cohort | Lifecycle: Growth/Upgrade | Time: Retrospective | Audience: Operational
**Segments:** All/None specified | Scope: Organization
**Collections:** Growth & Upgrade Pipeline

## QX161 Donor Tenure Distribution by Initial Segment

*This analytic looks at donor tenure (how many years they remain active) based on the segment ('Top', 'Middle', 'Bottom') they were in during their very first year of giving.It includes the average percentage of years donors in the initial segment were active during their tenure.*

This analysis examines donor tenure, specifically how long donors remain active with your organization based on the segment they belong to during their first year of giving. It utilizes data from your donor database, including information on total annual giving and fiscal year details, to categorize donors into three segments: 'Top', 'Middle', and 'Bottom'. The insights reveal not just the average tenure of donors in each segment but also the percentage of years they actively contributed relative to their total tenure. Key calculations include the average and median tenure in years for each segment, alongside the average percentage of active years donors contributed within their tenure. These metrics are crucial as they help you understand donor engagement over time, illustrating how effectively different donor segments are retained. For instance, knowing that 'Top' segment donors have a higher average tenure can guide your retention strategies, focusing your efforts on maintaining engagement with these high-value supporters. You can leverage these insights to make informed strategic decisions about donor engagement and retention efforts. For example, if you notice that the retention rates for 'Bottom' segment donors are significantly lower, it may prompt you to analyze the factors contributing to this drop and develop targeted outreach initiatives. This analysis can help you identify when to invest more resources in nurturing relationships with certain segments while potentially shifting focus away from less engaged groups. You should consider running this analysis quarterly to keep a pulse on changes in donor engagement and retention. Development officers and fundraising directors should review it, as they can directly use the findings to adjust fundraising strategies and donor communications. When applying these insights, prioritize creating tailored engagement plans for different segments, particularly focusing on enhancing the experience for the 'Middle' and 'Bottom' segments to boost their tenure. Success measures for evaluating the impact of this analysis could include tracking the changes in average tenure over time, the increase in active giving percentages among previously identified low-engagement segments, and improvements in retention rates at the one, two, and five-year milestones. By aligning your fundraising strategies with the insights drawn from this analysis, you can enhance donor relationships and ultimately drive greater revenue for your organization.

# 2.1: Outright Lapse Mitigation YOY

## QX1 Anniversary Analysis (Last Gift 11 Months Ago)

*This analysis (often delivered as a report) generates a tactical list of donors who made their last gift exactly 11 months ago.*

Anniversary Report (Last Gift 11 Months Ago) How to use the Anniversary Report (Last Gift 11 Months Ago) analysis This analysis identifies donors whose most recent gift was made exactly 11 months ago, highlighting those approaching their one-year anniversary since their last contribution. It draws on your Gifts and Constituents data, calculating each donor's giving patterns, including their most recent consecutive years of giving, total giving history, and detailed metrics about their donation frequency and generosity. The analysis presents a focused list of individual donors, supplying not only the anniversary timing but also critical supporting details, such as first and last gift dates, average and total giving, number of years active, and the length of their most recent consecutive giving streak. You can use this to easily identify donors who may be receptive to a personalized outreach timed to coincide with the anniversary of their last gift. It automatically excludes donors marked as deceased in your database. The Consecutive Years Giving metric, for instance, highlights loyal donors who may have lapsed recently but have a history of sustained support. The average gift amount and the number of months between gifts help you tailor your ask and stewardship strategy, while knowing the total number of years and gifts allows you to acknowledge their overall commitment in your communications. This Constituent Intelligence-driven analysis is valuable for prioritizing annual giving appeals and renewal campaigns. Fundraising directors and donor relations staff should review this set of analyses monthly, integrating it into their Constituent Intelligence routines to ensure timely follow-up with donors at risk of lapsing. Use the detailed donor information provided to craft highly personalized messages, referencing their giving history, recognizing past loyalty, and suggesting donation amounts that reflect their previous patterns. Development officers can also segment outreach, focusing extra attention on those with longer consecutive giving streaks or higher average gifts, as these individuals represent significant ongoing value. To evaluate the effectiveness of using this analysis, track renewal rates among contacted donors, compare year-over-year retention for this segment, and monitor increases in average gift size or total giving. Successful use should result in higher retention, more timely renewals, and deeper donor engagement.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational

## QX50 Last Fiscal Year First-Time Donors Detail -Covered in other Analyses Analysis

*This analysis (often used as a report) provides a detailed performance review of all donors who were newly acquired in the last full fiscal year.*

Last FY First-Time Donors Detail -Covered in other Reports How to use the Last FY First-Time Donors Detail -Covered in other Reports-Replace analysis This analysis identifies every donor who made their first gift during the last full fiscal year, providing a detailed view into this critical cohort. Drawing from your Gifts and Constituents data, it dynamically defines fiscal years (beginning in July) and pinpoints each constituent's initial contribution, then gathers details such as the first gift date and amount, total giving within that fiscal year, all subsequent gifts, and any giving in the current year. Each entry also includes the donor s name, which helps you recognize whether you re dealing with individuals or organizations, an important distinction when planning personalized stewardship. The core calculations-first gift timing, total giving in the last fiscal year, number of gifts, lifetime gift count, and follow-up giving-are essential for tracking acquisition and early retention. By highlighting which donors have made additional gifts since their initial one, and how much they have given since, you can assess the success of your onboarding and stewardship efforts. The inclusion of current-year giving enables you to identify new donors who are exhibiting early signs of loyalty, providing a timely opportunity for deeper engagement or even early upgrades. Use this analysis to prioritize outreach to first-time donors who make high initial gifts or those who have already begun giving again. The Total Gifts After First column is handy for segmenting follow-up strategies. Donors who have made more than one gift in a short span may warrant more personalized communications, invitations to special events, or targeted upgrade appeals. Including both the individual and organization donor names helps you tailor your approach and avoid generic outreach. Fundraising directors, annual giving managers, and stewardship coordinators should review this analysis regularly, at least quarterly, as part of their Constituent Intelligence routines. Use it to spot trends in donor acquisition, identify effective engagement tactics, and allocate resources toward retaining higher-value first-time donors. Success can be measured by increased retention rates among last year's new donors, higher average subsequent gift amounts, and improved conversion of first-time donors to multi-year supporters. By systematically mining these insights, you can strengthen your donor pipeline and elevate your organization's long-term fundraising performance.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational
**Segments:** Top, Middle, Bottom, New | Scope: Individual Donor
**Variant Family:** New Donors Acquired (segment variants)

## QX81 Bottom Donor Early Warning -Donor Action List Analysis

*This analysis actively sorts bottom segment donors by their behavior to create a prioritized list for immediate intervention to prevent lapsing.*

Bottom Donor Early Warning -Donor Action List How to use the Bottom Donor Early Warning -Donor Action List analysis This analysis identifies donors who are in the lower giving tier and are at risk of lapsing, allowing you to take action before their support is lost. It examines giving activity from the past 18 months, focusing on donors whose initial gift amounts place them in the bottom segment as defined by your organizational thresholds. By drawing on recent gift history, donor status, and segmentation data from your Constituent Intelligence system, the analysis highlights not just who is at risk, but how urgent and valuable each engagement opportunity might be. This analytic automatically excludes deceased donors. You'll see for each donor their risk level (such as High Risk - No Second Gift or Medium Risk - Recent Lapse), their value within the bottom segment (distinguishing High Value from others), and key supporting metrics: total giving, last gift amount, number of gifts, and the number of months since their first and most recent gifts. These supporting columns help you tailor your outreach, as seeing both their giving trajectory and recency can inform whether a personal call, automated campaign, or standard communication is appropriate. The analysis employs clear behavioral thresholds: for example, donors who gave only once more than a year ago are flagged as high risk, while those with some ongoing activity but recent lapses are classified as medium risk. Overlaying a value segment within the bottom tier allows you to prioritize higher-potential donors for more personalized attention. Recommendations are provided for each donor, such as a Personal touch suggested for high-value, high-risk individuals, or an Automated win-back campaign for others, supporting efficient and strategic stewardship. You should review this analysis regularly as part of your Constituent Intelligence routines. Fundraising directors and development officers can utilize it to assign follow-up actions, monitor at-risk segments, and adjust retention strategies in real-time. Consider using the insights to trigger targeted interventions, such as personal calls for high-value, high-risk donors, automated campaigns for others, and ongoing stewardship for those at lower risk. Success can be measured by tracking response and retention rates among flagged donors, improvements in second gift conversion, and an overall reduction in donor lapse within the bottom tier.

## QX86 Occasional Donor (3 of 5 years) Detail Analysis

*This analysis isolates a key group of donors who demonstrate significant loyalty and capacity but are not yet consistent annual givers.*

Occasional Donor (3 of 5 yrs) Detail How to use the Occasional Donor (3 of 5 yrs) Detail analysis This analysis identifies individual donors who have given in exactly three of the past five full fiscal years, labeling them as occasional donors. By focusing on this segment, you can spot donors who are engaged but not entirely consistent, presenting a prime opportunity for renewed cultivation. The analysis uses data from historical gift transactions, constituent records, and customizable segmentation thresholds to deliver a nuanced view of each donor's five-year giving behavior and recent engagement. It automatically excludes deceased donors. You are provided with a list of these occasional donors, ranked by meaningful metrics that go beyond simple totals. For each donor, you see their average annual giving over five years, average and median number of gifts when they gave, the average and median gift amounts, total years they've given to your organization, and details of their last gift (date and amount). The analysis also segments donors into Top, Middle, or Bottom tiers based on their average annual giving, using organization-specific thresholds, providing a prioritized view for outreach. The inclusion of fields like donor or organization name, recent giving activity, and lifetime engagement allows you to craft more personalized communications. Knowing when a donor last gave, and at what level, enables you to tailor your ask and stewardship to their unique history. Metrics such as the median gift count and amount help you set realistic, donor-appropriate asks, while lifetime giving years highlight long-term supporters who may be receptive to recognition or reactivation efforts. You should have development officers and annual giving staff review this analysis periodically as part of your Constituent Intelligence routines. Use it to select donors for targeted re-engagement campaigns, personalized stewardship, or special appeals designed to encourage more consistent annual support. Consider reaching out to Top segment occasional donors with tailored upgrade opportunities. In contrast, Middle and Bottom segment donors may benefit from personalized reminders or impact updates that encourage them to give more regularly. To measure success, track conversion rates from occasional to consecutive-year donors, increases in average annual giving, and response rates to targeted outreach built on these insights. Over time, effective use of this analysis should result in stronger donor retention, increased giving consistency, and a healthier annual fund pipeline.

## QX146 Recently Lapsed Top Donors (15 mo)

*This analytic identifies top segment donors who are recently lapsed, using 15 months since last gift as the definition of lapsed in this case.*

This analysis helps you identify top segment donors who have recently lapsed by defining lapsed donors as those who have not given a gift in the last 15 to 36 months. You'll find crucial data on these donors, including their total giving amounts in previous fiscal years, their last gift dates, and their giving patterns over time. By focusing on high-value donors who have stopped giving, you can prioritize re-engagement efforts effectively. The analysis starts by determining the minimum giving threshold for top donors, ensuring you concentrate on those with significant past contributions. It calculates total annual giving for each donor, identifies their most recent consecutive giving streak, and assesses various lifetime donor statistics, such as the number of gifts, average gift amount, and months since the last gift. These metrics highlight the donor's historical engagement and financial impact on your organization. Strategically, this analysis is invaluable for focusing your donor engagement efforts. By identifying donors who were previously significant contributors but have paused their giving, you can develop targeted re-engagement strategies. These donors have a history of generosity, making them more likely to resume contributions if approached thoughtfully. Understanding their donation patterns allows you to tailor communication and campaigns to resonate with their past behaviors. To maximize the benefits, consider running this analysis quarterly to keep your engagement strategies up-to-date. Fundraising directors and development officers should review the results to identify potential gaps in donor stewardship. Applying these insights could involve personalized outreach, such as phone calls or personalized letters, to rekindle these relationships. To measure success, track the number of lapsed donors who resume giving after targeted engagement efforts. Additionally, monitor the total value of contributions from re-engaged donors and the increase in donor retention rates over time. These metrics will help you evaluate the effectiveness of your strategies and the impact of using this analysis on your overall fundraising goals.

## QX147 Recently Lapsed Top Donors (18 mo)

*This analytic identifies top donors whose last gift was 18-36 months ago, for cases when you wish to extend the definition of lapsed to 18 months.*

This analysis identifies top donors who have recently lapsed in their giving, specifically those whose last donation was made between 18 and 36 months ago. The data used includes donor gift history, fiscal year donations, donor details, and thresholds that define what constitutes a "top donor." By focusing on this specific donor segment, you can gain insights into potential opportunities for re-engagement and identify donors who may be at risk of becoming permanently inactive. Key calculations in this analysis include determining the total giving for each donor in each fiscal year, identifying the most recent consecutive giving streak, and calculating lifetime donor statistics such as total gifts, average gift amount, and months since the last gift. The analysis also checks whether donors meet a predefined "top donor" threshold during their last active fiscal year. These metrics are crucial as they help you understand donor behavior patterns, identify consistent giving trends, and pinpoint when donors began lapsing. Strategically, this analysis can guide you in optimizing your donor retention efforts by highlighting high-value donors who have not been engaged recently. By understanding the giving patterns and last gift details, you can tailor communication and engagement strategies to these lapsed donors, potentially reigniting their interest and support. To maximize the benefits of this analysis, you should consider running it quarterly to keep the information current and actionable. Development officers and fundraising directors should review the findings to identify which lapsed donors to prioritize for personalized outreach. Utilize the insights to craft targeted re-engagement campaigns, focusing on personalized communication that acknowledges their past contributions and invites them back into the fold. Success measures for evaluating the impact of this analysis could include tracking the percentage of lapsed donors who re-engage and make new gifts following targeted outreach. Additionally, you should monitor the total dollar amount recovered through re-engagement efforts with these specific donors. By regularly assessing these metrics, you can gauge the effectiveness of your donor retention strategies and make informed adjustments to improve donor loyalty and retention rates.

## QX148 Recently Lapsed Top Donors (12 Mo)

*This analytic includes all Top Segment Donors who have lapsed as defined by their last gift being received 12-36 months ago.*

This analysis identifies top segment donors who have lapsed, specifically those whose last gift was received between 12 and 36 months ago. By examining data from your Gifts and Constituents tables, it reveals insights into donor behavior and engagement patterns. You can leverage this analysis to focus your re-engagement strategies on donors who have previously contributed significant amounts, thereby maximizing your fundraising potential. There are other variations of this analytic that use 15 months or 18 months as the threshold for considering a top donor lapsed. You should choose the version most appropriate to your Top Donor's giving cycles and typical time periods between gifts from your top donors. You can find that info in other analytics within the CI Hub. The analysis begins by establishing a threshold for what constitutes a "top donor" through the ClientThresholds common table expression (CTE). It then calculates total annual giving for each donor and assesses their giving patterns over the years. A critical part of the analysis involves determining each donor's most recent consecutive giving streak, which is essential for understanding their loyalty and engagement history. Key metrics include the number of years giving before lapsing, total gifts, average gift amounts, and the time since their last gift. These metrics are vital as they help you gauge not only the donor's previous engagement but also their potential for future giving. Strategically, this analysis empowers you to make informed decisions by identifying high-value donors who may need targeted outreach. Understanding the time since their last engagement allows you to tailor your communication and re-engagement efforts. For instance, you can create personalized messaging that acknowledges their past contributions and invites them back into the fold, potentially reigniting their interest in supporting your cause. You should consider running this analysis quarterly to ensure you're consistently identifying lapsed donors within the relevant time frame. Development officers and fundraising directors should review the findings, focusing on the top lapsed donors who meet the threshold criteria. Use the insights to craft specific outreach campaigns, potentially offering personalized updates on the impact of their previous donations or inviting them to exclusive donor appreciation events. To measure the success of using this analysis, track the re-engagement rates of identified donors and the total funds raised from these efforts. Additionally, monitor changes in the average donation amounts and the frequency of giving from these lapsed donors after your outreach. By doing this, you will not only assess the effectiveness of your re-engagement strategies but also build stronger, lasting relationships with your donor base.

### QX174 New Donors Last Fiscal Year

*This analytic examines all New donors captured in the last full fiscal year. It includes info on their giving last year and this year.*

This analysis focuses on identifying and evaluating new donors who made their first contribution in the last complete fiscal year. It uses data from your gifts and constituents records to examine their giving patterns both in the previous fiscal year and the current one. The analysis provides a comprehensive view of these new donors, offering insights into their initial and subsequent giving behavior. Key calculations include determining the first fiscal year a donor gave, the number and amount of gifts they contributed in the last fiscal year, and their ranking among all donors based on total giving. It also tracks their current fiscal year giving, including the number and size of gifts, and compares this year's giving to the same period last year. This is crucial for assessing donor retention and growth, as it helps you understand if these new donors are maintaining, increasing, or decreasing their support. Strategically, this analysis is valuable for tailoring your engagement strategies with new donors. By understanding their giving patterns, you can identify potential trends and strategize on how to nurture these relationships. For instance, recognizing donors whose giving is increasing could prompt targeted communication to further cultivate their involvement. Conversely, identifying donors whose giving has lapsed or decreased can trigger re-engagement efforts. You should consider running this analysis at the beginning of each fiscal year to assess the previous year's new donor cohort. It is particularly useful for fundraising directors and development officers who are responsible for donor engagement strategies. By reviewing these insights, they can align their strategies with donor behaviors and potentially adjust solicitation plans or stewardship activities. To measure the success of this analysis, track metrics such as the retention rate of new donors, the increase in average gift size, and the conversion rate of new donors to recurring donors. Additionally, monitor the effectiveness of any targeted engagement strategies that are implemented based on these insights. Success in these areas indicates effective use of the analysis, leading to stronger donor relationships and increased fundraising outcomes.

## 2.3: Within-Segment Growth

## QX49 Existing (Last 5 Years) Donor Major Gift Prospect Overview Analysis

*This analysis (often delivered as a report) segments your top donors into actionable prospect levels based on their demonstrated giving capacity.*

Existing (L5 yr) Donor Major Gift Prospect Overview How to use the Existing (L5 yr) Donor Major Gift Prospect Overview analysis This analysis helps you identify, segment, and better understand your most significant donors-those who have given at least one top-level gift in the past five years, as defined by your organization's "top_min" threshold in the Thresholds table. By focusing on this cohort, you can track not only their total (lifetime) giving but also key behaviors, such as the size and recency of their largest gifts, their giving in the last 12 months, and how recently they have donated. The analysis segments these donors into High, Medium, Emerging, and Core Top Level Donor prospect levels, based on how much their largest gift exceeds your top-level threshold. This allows you to quickly identify which supporters have major gift potential and who may be ready for a more personalized engagement strategy. Use this analysis to identify actionable insights for your major donor pipeline. The inclusion of metrics such as average and median giving amounts, days since the last gift, and recent giving activity helps you prioritize outreach. For example, the "Recent Givers (90 Days)" metric points you toward engaged donors who may be receptive to stewardship or upgrade asks, while tracking "Median Days Since Last Gift" can highlight who might require re-engagement. The "Avg Lifetime Giving" and "Avg Largest Gift" inform you about the depth of each segment's support, helping tailor your cultivation and solicitation plans. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. Major gift officers, development directors, and prospect research staff should review it to identify prospect movement, set meeting priorities, and track the health of each segment. You can use the segmented insights to develop targeted strategies: for instance, assign High Prospects to personalized moves management plans, while creating tailored stewardship journeys for Emerging Prospects to encourage upgrades. Consider using supplemental donor profile information alongside these metrics to craft highly personalized outreach that acknowledges past giving and speaks to the donor's unique relationship with your mission. Success measures for this analysis include increased conversion of prospects to higher giving levels, improved retention among top-level donors, and a shorter lag between gifts for each segment. Monitoring changes in these metrics over time will help you refine your Constituent Intelligence practices and demonstrate the effectiveness of your donor engagement strategies.

## QX131 Active Top Donor Frequency And Mo Gift Distribution Analysis

*This analysis (often delivered as a report) creates a detailed "dossier", or donor profile, for every active donor who was in your Top tier last year.*

Active Top Donor Frequency And Mo Gift Distribution How to use the Active Top Donor Frequency And Mo Gift Distribution analysis This analysis identifies your nonprofit's most significant, actively engaged donors-those who were in the top giving tier during the last full fiscal year-and provides a detailed profile of their giving behavior over time. It draws from your Gifts and Constituents data, using donation histories to spotlight each top donor's total giving, frequency, preferred giving months, and recency of gifts. By combining these elements, you gain both a high-level view and actionable details about your most valuable donor relationships. The analysis does more than simply list top donors. For each active major donor, you see their lifetime giving totals, the number of years they have actively contributed, and the date and amount of their most recent gift. It categorizes each donor's giving cadence (such as Frequent Giver or Quarterly Responder ) and highlights their most common and second-most common giving months. Monthly gift counts are presented, allowing you to spot patterns-for example, donors who give every December or who respond to spring appeals. This is Constituent Intelligence in practice: using behavioral data to fine-tune your understanding and engagement tactics. You should pay attention to the supporting columns, such as Donor name, monthly gift distribution, and giving pattern. These details equip you to personalize outreach-for instance, by timing stewardship or targeted appeals around a donor s favored giving months, or by recognizing a donor s longevity and consistency in your communications. Strategically, this analysis enables you to prioritize stewardship for recent top donors, identify opportunities for tailored requests, and detect shifts in donor engagement. Development officers and major gift officers should review this analysis regularly, particularly before campaign planning or donor meetings. You can apply the insights by crafting individualized stewardship strategies, adjusting appeal timing, and segmenting donor communications based on giving frequency. Success can be measured by improvements in donor retention among your top segment, increased response rates to targeted outreach in preferred months, and growth in annual giving from this high-value cohort. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure your engagement strategies remain proactive and data-driven.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational
**Segments:** Top | Scope: Segment, Individual Donor

## QX132 Warm Top Donor Frequency and Month Distribution Analysis

*This analysis (often delivered as a report) creates a detailed "dossier", or donor profile, for every warm donor who was in your Top tier last year.*

Warm Top Donor Frequency and Month Distribution How to use the Warm Top Donor Frequency and Mo Distribution analysis This analysis helps you identify and understand the giving patterns of your warm-top donors—those who were active in the two fiscal years preceding the most recent complete fiscal year but have not yet made a gift in the last full year. It draws on your Gifts and Constituents data to surface not only each donor's total and frequency of giving but also the specific months they most prefer to give, along with details about their recent giving activity. By examining patterns such as Mode Month (the most common giving month) and Second Mode Month, you gain insight into seasonality and timing preferences, helping you tailor your outreach for optimal engagement. You'll see individual donor listings that include supporting information, such as donor name, organization affiliation, lifetime giving totals, number of active giving years, most recent gift date and amount, and a month-by-month breakdown of gift counts. These details go beyond core calculations and are invaluable for crafting personalized stewardship and solicitation strategies. For example, knowing a donor's preferred giving months or average gifts per year allows you to time your asks better and acknowledge their historical support in a meaningful way. Key metrics include Lifetime Total Giving, Average Gifts Per Year, Most Recent Gift Month, and Giving Pattern, classifying donors as Frequent Givers, Quarterly Responders, Bi-Annual Givers, Annual Givers, or Sporadic Givers. These classifications help you prioritize cultivation and reactivation efforts by focusing on donors who are most responsive to outreach and are most likely to renew or upgrade their support. Strategically, this analysis empowers you to segment your warm donors for targeted re-engagement campaigns, prioritize meetings and calls with those who have a history of frequent or high-impact giving, and personalize messaging based on giving cadence and timing. Directors of Development and major gifts officers should review this analysis, particularly during campaign planning and at the beginning of each fiscal year, to ensure that no promising supporters are overlooked. It's also recommended to be reviewed periodically as part of your Constituent Intelligence routines to keep your outreach timely and relevant. To measure success, track reactivation rates among these warm donors, monitor increases in renewal gifts during their preferred months, and assess the growth in average gift size or total giving from this segment over time. Consistently applying this analysis should lead to higher retention, more personalized stewardship, and ultimately stronger donor relationships.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational

## QX133 Active Middle Frequency and Mo Distribution Analysis

*This analysis creates a detailed "dossier" or donor profile for every active donor who was in your middle segment last year.*

Active Middle Frequency and Mo Distribution How to use the Active Middle Frequency and Mo Distribution analysis This analysis helps you identify and understand your current cohort of middle-tier donors- those who gave within a specific dollar range during the last full fiscal year, as defined by your organization's thresholds. Drawing from your Gifts and Constituents data, it compiles a comprehensive set of metrics for each donor who fits this profile. You gain immediate visibility into their lifetime giving total, the largest gift, its timing, the number of active giving years, and the recency of support. For each donor, the analysis also reveals their most frequent giving months (Mode Month and Second Mode Month), providing insight into their habitual engagement windows. The set of outputs includes both calculated metrics and supporting columns, such as the donor's name, most recent gift amount, and a full 12-month breakdown of gift counts. These details enable you to quickly identify not only who your most valuable middle donors are, but also when and how often they are likely to give. The inclusion of calendarized giving patterns enables the tailoring of communications and solicitations to match each donor's behavior. For example, if a donor tends to give in May and December, you can tailor your outreach to maximize relevance. Key calculations include the average number of gifts per year, categorized into meaningful segments, such as Frequent Giver or Sporadic Giver.  These patterns are vital for segmenting stewardship efforts, prioritizing personalized outreach, and identifying donors who may be ready for cultivation into higher tiers. You should use this as a foundation for one-to-one strategy sessions, planned campaign calendars, and moves management. You are encouraged to have your development officers and annual giving managers review this analysis, especially before campaign planning, renewal cycles, or major stewardship pushes. Use the insights to shape personalized engagement plans, align solicitation timing with donor preferences, and spot at-risk relationships. Incorporate the supporting data to craft individualized thank-you notes or invitations based on a recipient's giving history. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. To measure success, track increases in renewal rates, lift in average gift size, and improved conversion of middle donors to higher giving levels. Monitor response rates to personalized or seasonally timed outreach as additional indicators of impact. By integrating these insights, you can drive stronger relationships and more predictable fundraising results.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational
**Segments:** Middle | Scope: Segment, Individual Donor
**Variant Family:** Active Donor Frequency & Monthly Distribution (segment variants)
→ Run First: QX172 Segmentation Break Points

## QX134 Warm Middle Donor Frequency and Mo Distribution Analysis

*This analysis creates a detailed "dossier" or donor profile for every warm donor who was in your middle segment last year.*

Warm Middle Donor Frequency and Mo Distribution How to use the Warm Middle Donor Frequency and Mo Distribution analysis This analysis helps you identify and understand warm middle-tier donors whose most recent gift was made in either of the two previous fiscal years and whose annual giving placed them within your organization's middle segment at that time. Using detailed data from your gift and constituent records, including gift dates, amounts, and donor segmentation thresholds, the analysis identifies which donors have lapsed recently but are likely to return with the right strategy. It provides you with a comprehensive view of each donor's giving frequency, total lifetime support, largest gift, active years, and most recent giving behavior. Importantly, it also summarizes each donor's preferred months for making gifts, highlighting their top one or two giving months, which can inform optimal outreach timing. Beyond the core calculations, you ll see supporting information such as the donor s name (from either individual or organizational sources), the precise dates and amounts of milestone gifts, and a breakdown of gifts by calendar month. These details allow you to tailor your approach and personalize communications, making your stewardship more relevant and timely. Key metrics include each donor's average number of gifts per active year, their overall giving pattern (such as frequent, quarterly, annual, or sporadic), and the distribution of their gifts throughout the year. Understanding these patterns is crucial for segmenting your audience, prioritizing re-engagement, and planning targeted appeals. Knowing a donor s mode giving months helps you time your asks when they are historically most receptive. Strategically, you can use this analysis to prioritize outreach to donors who are at risk of lapsing but have a strong history of giving, thereby maximizing your retention efforts. Annual fund managers and development officers should review these findings regularly to inform segmentation, design personalized renewal campaigns, and schedule appeals with greater precision. Additionally, major gift officers can leverage the lifetime and largest gift data to identify prospects for deeper engagement. As an actionable routine, assign stewardship staff to review this analysis as part of your Constituent Intelligence routines at least quarterly, especially ahead of key fundraising periods. Use the insights to craft more personalized emails or calls, plan special touchpoints in donors' preferred months, and monitor reactivation rates. Measure your success by tracking the increase in response rates, renewed gifts from warm middle donors, and improvements in year-over-year donor retention within this segment.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational

### QX135 Active Bottom Donor Frequency and Mo Distribution Analysis

*This analysis creates a detailed "dossier" or donor profile for every donor who was in your bottom segment last year.*

Active Bottom Donor Frequency and Mo Distribution How to use the Active Bottom Donor Frequency and Mo Distribution analysis This analysis identifies and profiles your bottom-tier donors- those whose total giving in the last full fiscal year falls below a set threshold, providing detailed insights into their giving patterns and tendencies. The analysis draws data from your Gifts and Constituents tables, focusing on donors who remain active, and compiles a comprehensive overview of their lifetime giving, frequency, and preferred times of year for making gifts. By surfacing trends such as each donor's most frequent giving months (their mode and second mode months), active years, and recency of gifts, it helps you understand not just how much these donors give, but also when and how often they engage. You'll find supporting information such as each donor's total lifetime giving, largest significant single gift, number of active giving years, and most recent gift date and amount. These details are presented alongside calculated giving patterns, which categorize donors (e.g., Frequent Giver, Quarterly Responder, Annual Giver ) based on their average number of gifts per year. This segmentation enables you to quickly identify which donors are most engaged and which may require reactivation or special attention. Use this analysis to prioritize outreach strategies for retaining and upgrading bottom-tier donors. For example, knowing a donor's preferred giving months allows you to time appeals for maximum relevance. The breakdown of monthly giving activity and recency helps you identify lapsed donors at risk of attrition or those transitioning to more frequent engagement. You can also use the donor name and organization details to craft highly personalized messages, leveraging lifetime and recent gift information to acknowledge their history and prompt renewed support. Fundraising managers, annual fund directors, and stewardship teams should regularly review this analysis as part of their Constituent Intelligence routines. Apply these insights to segment communications, test timing of asks, and identify bottom-tier donors with the potential for upgrade. To measure success, track improvements in retention rates, increases in average gift frequency, and the number of bottom-tier donors who move to higher giving segments over time. By integrating these findings into your engagement strategies, you can build stronger, data-driven relationships and drive sustainable fundraising growth.

**Type:** Cohort | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational
**Segments:** Bottom | Scope: Segment, Individual Donor
**Variant Family:** Active Donor Frequency & Monthly Distribution (segment variants)

## 2.4: Upward Segment Migration

## QX75 Diamonds in the Rough who started as Bottom Segment Donors Analysis

*This analysis sifts through your entire donor base to find donors who started with small gifts but show potential to become larger donors.*

Ten Year Top 5 Diamond in the Rough Donors How to use the Diamonds in the rough who started as Bottom Donors analysis This analysis helps you identify donors who began their support in the lowest giving tier but have since demonstrated exceptional growth. By tracking donor giving patterns over time, it surfaces individuals who started with modest gifts, and within three fiscal years, increased their giving to levels at least three times higher than the bottom segment threshold. It uses historical giving data from your Gifts table, including annual totals, first-year giving, and subsequent three-year performance, and filters for recency and living status to ensure the results are actionable. You receive a ranked list of standout donors for each acquisition year, focusing on those whose initial support placed them in the lowest tier but who have since shown outsized commitment. Each donor profile includes acquisition year, original giving amount, total giving over the subsequent three fiscal years, their most recent gift date and amount, and the donor's name and ID. These supporting columns, such as last gift date and amount, are especially helpful for planning personalized stewardship and tailored outreach, as they provide context on each donor's recent engagement and preferred giving level. The key metric here is the subsequent three Fiscal Year giving -the total donated in the three years after acquisition. By limiting the list to donors whose giving tripled the bottom-tier maximum, and ranking the top 10 per year, you can quickly spot high-potential individuals who have responded well to cultivation. This empowers you to recognize and nurture emerging major donors who might otherwise be overlooked if you focused only on initial gift size. You should use this analysis to inform upgrade strategies, stewardship planning, and personalized communications for donors with strong upward trajectories. Annual and major gift officers, as well as stewardship leads, should review it to flag diamonds in the rough for targeted engagement, invitation to special events, or inclusion in upgraded portfolios. You can also use these insights to recognize the effectiveness of acquisition and cultivation programs designed to grow smaller donors. Success can be measured by tracking the retention and upgrade rates of these identified donors, monitoring increases in their future giving, and assessing the effectiveness of personalized outreach efforts. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you consistently surface and act on emerging donor growth trends.

**Type:** Cohort | Lifecycle: Growth/Upgrade | Time: Retrospective | Audience: Operational
**Segments:** Top, Middle | Scope: Individual Donor
**Variant Family:** Diamond in the Rough (variant variants)
**Collections:** Growth & Upgrade Pipeline
**Workflows:** Upgrade Pipeline Assessment (Step 5)
→ Also Try: QX149 Multi-year Donor Upgrade Analysis; QX23 Average Time to Top Segment Donor -First; QX25 Middle to Top Donor Pathway

## QX76 Diamonds in the Rough who started as Middle Segment Donors Analysis

*This analysis sifts through your entire donor base to find donors who started as middle segment donors but show potential to become larger donors.*

Diamonds in the Rough who started as Middle Donors How to use the Diamonds in the Rough who started as Middle Donors analysis This analysis helps you identify the rare but valuable donors who began their relationship with your organization as "middle" level givers and, over the next three fiscal years, grew their giving into your "top" donor segment. By examining the giving histories in your Gifts and Constituents data, the analysis pinpoints which donors' first annual giving placed them in the middle segment (based on your Thresholds table), then tracks their total giving across the following three fiscal years. Only those who meet or exceed the threshold for top donor status during this period are highlighted, with the ten individuals with the highest growth rates per acquisition year selected. To ensure current relevance, the analysis includes only those donors who have made a gift within the last two fiscal years and are not marked as deceased. You ll see not only acquisition year and growth ranking, but also important context columns such as the donor s name, total giving in their first year, cumulative giving across the next three years, last gift date, and last gift amount. These details are crucial for personalizing outreach, as they allow you to reference recent engagement and tailor your stewardship according to the donor's trajectory. The key calculations focus on the initial fiscal year giving, cumulative three-year growth, and recency of engagement. Tracking the jump from middle-tier entry to top-tier performance helps you recognize patterns among high-potential donors and validate the effectiveness of your mid-level donor programs. Strategically, you can use this analysis to prioritize cultivation efforts, inform major gift pipeline development, and celebrate those whose giving signals exceptional engagement. Annual and major gift officers should review this analysis together, using it to identify donors for special recognition, targeted upgrade campaigns, or bespoke stewardship. You might also want to share these insights with leadership to highlight pipeline successes and inform investment in mid-level donor strategies. Reviewing this analysis periodically as part of your Constituent Intelligence routines will help you measure the long-term value of your middle donor segment and adjust your engagement tactics. Success should be evaluated by tracking the number of middle donors who progress to top-giver status, the effectiveness of personalized outreach tailored to the provided context, and increases in retention or upgrade rates among this high-growth cohort.

**Type:** Cohort | Lifecycle: Growth/Upgrade | Time: Retrospective | Audience: Operational
**Segments:** Top, Middle | Scope: Individual Donor
**Variant Family:** Diamond in the Rough (variant variants)
**Collections:** Growth & Upgrade Pipeline

# 2.5: Large Gift Growth (75th Percentile)

## QX88 Current (Last 5 Years year) Donors Major Gift Prospect Detail Analysis

*This analysis analyzes your best donors to identify and rank those with the highest potential for future transformational gifts.*

Current (L5 yr) Donors Major Gift Prospect Detail How to use the Current (L5 yr) Donors Major Gift Prospect Detail analysis This analysis is designed to help you identify and understand donors who have shown signs over the last five years that they may be receptive to solicitation of a major gift so that you can prioritize outreach and stewardship. By drawing from your Gifts and Constituents data, it spotlights individuals (or organizations) who meet or exceed your top-level giving threshold, as defined in your Thresholds table. For each donor, the analysis aggregates essential giving metrics, such as total lifetime giving, number of gifts, years given, their largest gift, and when it occurred, as well as details about their most recent gift. It also calculates each donor's current consecutive fiscal year giving streak, showing you who maintains ongoing support year after year. You'll see each donor categorized into prospect levels-High, Medium, Emerging, or Core Top Level Donor-based on the size of their largest gift relative to your organizational benchmarks. This stratification helps you quickly identify high-potential prospects for major gift cultivation and stewardship. Key metrics, such as lifetime giving, unique years of giving, and consecutive-year streaks, are critical for understanding a donor's long-term commitment, propensity for larger gifts, and overall relationship trajectory. These insights allow you to tailor your engagement strategies, segment your portfolios for moves management, and flag donors who may be ready for an upgrade or require special attention to maintain their loyalty. The analysis is sorted to surface your highest-level prospects first, streamlining your prioritization. You should ensure that major gifts officers, development directors, and annual giving managers review this analysis together, ideally at the start of campaign planning or during regular portfolio reviews. Use the insights to identify which donors merit a personal stewardship touch, targeted upgrade asks, or inclusion in leadership circles. Additionally, review consecutive giving streaks to identify donors at risk of lapsing, allowing you to intervene early. Success can be measured by tracking increases in major gift upgrades, improved donor retention among your top segments, and the number of personalized outreach actions documented in your CRM. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring your strategies remain data-driven and responsive to donor behavior.

**Type:** Cohort | Lifecycle: Growth/Upgrade | Time: Retrospective (Multi-Year) | Audience: Operational

## 2.6: Recaptured Donors YOY

## QX2 Recently Lapsed Donors Analysis

*This analysis provides a prioritized list of valuable but inactive donors, along with the key data needed to craft an effective reactivation strategy.*

Recently Lapsed Middle and Bottom Segment Donors How to use the Recently Lapsed Donors analysis This analysis identifies donors who previously gave regularly but have not made a gift in the past 13 to 36 months, a group typically classified as recently lapsed. By drawing from your Gifts and Constituents data, it highlights not only which donors have stopped giving recently, but also provides a comprehensive profile for each, showing their total giving history, patterns of consecutive years of giving before lapse, last and first gift dates, average gift size, and time elapsed since their last contribution. This enables you to move beyond simply flagging lapsed donors; you gain actionable Constituent Intelligence to understand each donor's commitment and the potential for re-engagement. The analysis calculates several key metrics: the number of consecutive years a donor gave before lapsing (their most recent giving streak), the number of years in which they gave at least once, lifetime value, and the average interval between gifts. This is especially useful for prioritizing outreach: a donor who gave for many years in a row before recently lapsing may be a strong candidate for targeted reactivation efforts. Details such as the donor's name, the last gift amount, the total number of gifts, and whether the donor is an individual or an organization are included to help you personalize your approach. For example, knowing the size and recency of their last gift, as well as their total giving, can help determine the right ask level or stewardship strategy. It excludes deceased donors from the list. You should use this analysis to guide segmentation for lapsed donor campaigns, prioritize call lists for development officers, and tailor messaging to reflect each donor's history and value. Fundraising directors, stewardship teams, and frontline gift officers should review the analysis together to assign outreach responsibilities and draft personalized messages using the supporting data fields. Consider setting up a workflow where lapsed donors with the longest consecutive giving streaks are prioritized for personal outreach. At the same time, those with fewer years but high gift value receive tailored communications. As a measure of success, track the reactivation rate of donors identified in this analysis, the average size of their renewed gifts, and the improvement in overall donor retention among recently lapsed segments. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure timely intervention and ongoing improvement in donor engagement strategies.

# 2.7: New Donor Journey thru Third Gift

## QX6 First Time Donor Second Gift Analysis

*This analysis is a real-time dashboard for tracking your most important retention metric: converting new donors into repeat supporters.*

First Time Donor Second Gift Analysis How to use the Recent First Time Donors Second Gift Status analysis This analysis identifies donors who made their first gift within the past 18 months (using a rolling window that captures both the current and previous calendar years, adjusted for fiscal calendars) and shows whether they have gone on to make a second gift. By drawing from your Gifts and Constituents data, it surfaces each recent first-time donor, along with their first gift date, first gift amount, and whether a subsequent contribution has been recorded. This enables you to monitor early-stage donor engagement and conversion from first to second gift, a critical step in building long-term donor relationships. You see not just which new donors have given again, but also important supporting details, such as donor name, organization affiliation, and the amount and timing of their initial gift. These columns, while not directly part of the second gift calculation, are essential for crafting personalized stewardship and tailored outreach strategies. For instance, knowing the exact date and size of a donor's first gift helps you time your follow-up appropriately and recognize giving at the right level. The key calculation here is identifying recent first-time donors and tracking whether they have made a second gift. This matters because retention rates from the first to the second gift are often significantly lower than for more established donors; however, improving this conversion has a substantial, long-term impact on your fundraising pipeline and lifetime donor value. By focusing on this group, you can intervene early, personalize communications, and increase the likelihood of building loyal supporters. Strategically, you should use this analysis to prioritize follow-up for first-time donors, segment communications, and test stewardship approaches that encourage a timely second gift. Development officers, annual giving managers, and donor stewardship teams should review this analysis—ideally every month or quarter—as part of their Constituent Intelligence routines. Use the insights to craft targeted campaigns, send personalized thank-you messages, or trigger cultivation calls for those who have not yet given a second time. To measure success, track changes in your second gift conversion rate among recent first-time donors, monitor increases in retention, and compare the long-term value of those receiving enhanced follow-up versus those who do not. Over time, the impact of applying these insights should be reflected in stronger donor retention and a more resilient donor base.

**Type:** Cohort | Lifecycle: Acquisition, Onboarding, Retention | Time: Retrospective | Audience: Operational
**Segments:** Top, Middle, Bottom, New | Scope: Individual Donor
**Variant Family:** New Donor Gift Journey (stage variants)
**Collections:** New Donor Onboarding Monitor
→ Also Try: QX26 First-Time Donor 13-Month Retention

## QX14 New Donor to Second Gift Conversion Analysis

*This report provides a deep, strategic analysis of new donor behavior, showing how well you convert them to a second gift and more long term giving.*

New Donor to Second Gift Conversion How to use the New Donor to Second Gift Conversion analysis This analysis helps you understand how effectively your organization is retaining new donors by measuring the proportion of first-time donors who return to make a second gift. It draws on your complete giving history, identifying all individuals who made their first gift within the last 36 months, and then tracks whether and when each of those donors made a subsequent gift. It segments new donors based on their initial gift size, using your own threshold definitions for Top, Middle, and Bottom segments, so you can see how retention and upgrading patterns differ by giving level. You'll find metrics such as the total number of new donors in each segment and fiscal year, the number who converted to a second gift, the conversion rate, average amounts for first and second gifts, the average time between gifts, and the percentage who increased their gift on the second donation. There's also a focus on quick conversions (second gifts within three months), which can signal strong early engagement. You can use this analysis to spot which segments are most likely to return, how quickly they do so, and whether your stewardship efforts are driving upgrades or rapid follow-up gifts. The detailed breakdown by acquisition year and gift segment allows you to tailor cultivation strategies for each cohort. For example, if Middle-segment donors convert more slowly than Top-segment ones, you might test more personalized touches for that group. The included data on upgrade rates shows where your messaging or programs are most effective at encouraging larger subsequent gifts. It's essential that major gift officers and annual giving managers review this analysis regularly, as recommended as part of your Constituent Intelligence routines, to identify high-potential donors for further engagement and to refine onboarding or stewardship programs. Apply the insights by customizing follow-up timing, targeting upgrade appeals where the data shows strong potential, and celebrating quick conversions as early wins. Measure your success by tracking improvements over time in conversion rates, upgrade percentages, and reductions in time to second gift-these indicators will show whether your strategies are strengthening new donor retention and deepening relationships.

**Type:** Cohort | Lifecycle: Acquisition, Onboarding | Time: Retrospective | Audience: Operational

## QX15 Second to Third Gift Retention Analysis

*This analysis analyzes the crucial next step in the donor journey: converting a two-time donor into a three-time, potentially long-term supporter.*

Second to Third Gift Retention How to use the Second to Third Gift Retention analysis This analysis examines how effectively you retain donors between their second and third gifts, a crucial stage in deepening donor relationships and fostering long-term support. It follows each donor from their first through third gift, including gift dates and amounts, over the past three years, focusing on donors who have already made a second gift. By segmenting donors into value tiers (Top, Middle, Bottom) based on the combined amount of their first two gifts, and aligning results by the fiscal year of their second gift, you gain a nuanced view of retention and value progression across your donor base. You can use this analysis to see not only the percentage of donors who make a third gift after their second, but also key behaviors like how quickly donors move from first to second and second to third gift, whether they upgrade their giving on the third donation, and the average and median amounts given at each stage. These insights help you identify which segments are most at risk for attrition and who is most likely to increase their support. For example, by tracking the 3rd Gift Conversion Rate, you can see where your stewardship efforts are most effective and where they need strengthening. The upgrade rate and median gift amounts help you spot donors whose giving potential is growing. This analysis excludes donors marked as Deceased in your database. Fundraisers should pay close attention to the value segments and time between gifts, as these reveal which donors are likely to move up the giving ladder and which may need more personalized engagement. If you review the underlying donor-level data, you'll find supporting details-such as the specific timing and amounts of each donor's first three gifts-that can be used to tailor outreach, acknowledge milestones, or re-engage lapsed donors in a more personalized way. You should have annual fund managers, major gift officers, and donor relations staff review this analysis, especially those responsible for donor retention and upgrade strategies. Use the findings to prioritize follow-up with second-gift donors who have not yet made a third gift, develop targeted upgrade campaigns for those showing upward trends, and refine your welcome and stewardship series for new donors. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure you catch trends early and adapt your approach accordingly. Measure your success by tracking increases in your third-gift conversion rate, higher average and median gift amounts at each stage, and improvement in the percentage of donors upgrading on their third gift. Over time, these improvements should translate into stronger donor retention, greater lifetime value, and a more robust base of committed supporters.

**Workflows:** New Donor Journey Monitor (Step 4)

## QX26 First-Time Donor 13-Month Retention Analysis

*This report provides a historical, year-by-year analysis of your new donor retention rate, revealing how well you convert first-time donors into repeat...*

First-Time Donor 13-Month Retention How to use the First-Time Donor 13-Month Retention Analysis analysis This analysis identifies all new donors who have given their first gift within the last ten years, then checks whether they made a second gift within 13 months-a key window for cultivating lasting relationships. By tracking the first and second gift dates and amounts, and segmenting donors by gift size (Top, Middle, Bottom, based on thresholds you maintain), you can see how effectively your team is retaining new supporters across different giving levels and fiscal years. The underlying data includes each donor's unique ID, gift dates, and amounts. You'll find actionable metrics, such as the total number of new donors per segment and year, the percentage of donors retained with a second gift within the critical 13-month period, and the resulting retention rate. The analysis also provides average and median values for both first and second gifts, along with the average time (in months) it takes for retained donors to make that second gift. These details enable you to benchmark your performance, identify which donor segments are most likely to remain engaged, and pinpoint opportunities for intervention if retention rates drop. This set of analyses is compelling for planning stewardship and personalized follow-up. For example, development officers can use segment-specific insights to tailor messaging or outreach tactics. You should review this analysis at least quarterly—ideally as part of your Constituent Intelligence routines —to monitor trends and quickly address emerging gaps. Fundraising directors and donor engagement leads should utilize these insights to refine their welcome series, stewardship journeys, and renewal campaigns, particularly for segments where retention rates are lagging. For maximum impact, assign ownership of segment retention targets to specific team members and track progress after applying new strategies. Success can be measured by improved 13-month retention rates year over year, higher average second gift amounts, and shorter intervals between first and second gifts within each segment. This approach will help you build a stronger, more loyal donor base and inform data-driven strategies for long-term growth.

## QX48 New Top Donors Acquired Last Fiscal Year Analysis

*This analysis (often delivered as a report) identifies a premier group of new supporters: those whose very first year of giving was at a top-tier level.*

New Top Donors Acquired LFY How to use the New Top Donors Acquired LFY analysis This analysis identifies all new top donors who made their very first gift in your last full fiscal year and whose giving placed them above the minimum threshold for inclusion in your Top Donor segment. By scanning your Gifts and Constituents data, it finds individuals or organizations whose first-ever support occurred in that year, calculates their total giving, the number and size of their gifts, and surfaces their most recent gift activity. The donor list you receive includes not only their giving totals but also helpful context, such as donor name, last gift date, and the largest gift, so you can quickly prioritize outreach and personalize your engagement strategies. The key calculations here are: first, the fiscal year in which each donor made their inaugural gift; second, their total giving within the last full fiscal year (LFY); and third, whether that total met or exceeded your top donor threshold, as defined in your Thresholds data. These metrics matter because they pinpoint your highest-potential new donors-those who have just entered your pipeline at a significant giving level and are prime for cultivation and stewardship before their enthusiasm fades. Strategically, you can use this analysis as a cornerstone for onboarding new donors, prospecting major donors, and personalized stewardship planning. By quickly surfacing these newly acquired top donors, you have the opportunity to engage them early, recognize their leadership-level impact, and lay the groundwork for long-term loyalty. For each donor, the analysis also provides recent gift dates and the largest gift information, which can be leveraged to tailor communications, acknowledge milestone gifts, and personalize outreach. You should recommend this analysis to all development officers and stewardship managers. Frontline fundraisers can use it to prioritize discovery calls, while donor relations teams can use the provided details to craft personalized welcome packages or event invitations. Major gift officers, in particular, should focus on these donors as high-potential prospects for further qualification and cultivation. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring new top donors are promptly identified and engaged. To measure success, track subsequent retention and upgrade rates among these new top donors, monitor the speed and frequency of follow-up actions, and assess whether more of these donors move into higher giving tiers or increased engagement over time. By acting on these insights, you can strengthen your pipeline, build lasting donor relationships, and enhance overall fundraising performance.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational

→ Also Try: QX51 First-Time Top Donors (10yr) Annual Anal

## QX87 New Middle Level Donors Last Fiscal Year Analysis

*This analysis (often used as a report) identifies newly acquired Middle segment/tier donors from the previous year.*

New Middle Level Donors LFY How to use the New Middle Level Donors LFY analysis This analysis helps you identify all individuals or organizations that made their first gift to your nonprofit in the last full fiscal year and whose total giving in that year falls within your defined middle-level segment. Drawing from both your Gifts and Constituents tables, it aggregates each donor's giving history, flags those whose initial giving aligns with the most recent full year, and filters for those whose giving meets the middle segment thresholds set in your Thresholds table. The result is a targeted list of new middle-level donors, each accompanied by supporting information, including their total and largest gifts from the previous year, the number of gifts, and details about their most recent donation. The primary metrics calculated are each donor's total giving, number of gifts, and largest single gift in the previous fiscal year. Importantly, it only includes those whose first-ever gift was made in that period, ensuring you focus on donors who are genuinely new to your organization. The analysis also provides helpful contextual data-the donor's name, their most recent gift date, and the amount-allowing you to approach each individual with a personalized, timely message that acknowledges their specific giving pattern. You should leverage this analysis to inform both immediate stewardship and longer-term cultivation strategies. Recognizing and engaging new middle-level donors early is critical, as this segment often represents those with the greatest potential for future upgrading and retention. Consider using this set of analyses to coordinate welcome and thank-you campaigns, assign new donors for relationship-building by development officers, and prioritize these individuals for tailored communications or invitations to special events. Fundraising directors, prospect researchers, and frontline gift officers should all review this analysis. Incorporate its findings into your regular Constituent Intelligence meetings to track how many new middle-level donors you're attracting and how quickly you follow up with them. To gauge your success, monitor retention rates, subsequent year upgrades, and engagement levels among this group. Measurable increases in these areas will signal that you're effectively cultivating your next generation of major supporters. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines.

**Type:** Cohort | Lifecycle: Acquisition | Time: Retrospective (LFY) | Audience: Operational

# 3.2: Prospect Identification

## QX168 Segment Migration Detail (Last 5 FY)

*This analysis tracks the year-over-year movement of individual donors during their first five fiscal years to determine if they upgraded to higher giving tiers, maintained their status, or lapsed. The query filters for donors whose first gift was between 5 and 9 fiscal years ago (defined in fiscal_year_params). This ensures that enough time has passed to actually measure a 5-year history.*

This analysis provides a comprehensive overview of individual donor migration patterns during their first five fiscal years with your organization. It utilizes data from donor gifts, including the amount and date of each gift, to categorize donors into segments-Top, Middle, and Bottom-based on their cumulative giving. The analysis specifically focuses on donors whose initial contribution occurred between five to nine fiscal years ago, allowing you to observe their giving behavior over a significant period. Key calculations in this analysis involve determining each donor's segment for each fiscal year they contributed. By tracking the segment status over five years, you can identify whether donors upgraded to higher tiers, maintained their current status, or lapsed. This information is crucial because it helps you understand donor retention and upgrading trends, which are essential for effective fundraising strategies. Knowing how many donors have moved up or down in segments can inform your engagement tactics and resource allocation. The strategic value of this analysis lies in its ability to guide your fundraising initiatives. By identifying which segments have the highest rates of retention or upgrades, you can tailor your communication and stewardship efforts to nurture these relationships. For example, if you notice that a significant number of donors from the Middle segment are lapsing, it may warrant an intervention, such as targeted outreach or exclusive events aimed at re-engaging them. You should consider running this analysis annually, ideally after the fiscal year ends, to capture the most recent donor behavior. Fundraising directors and development officers should review the findings to make informed decisions about donor engagement strategies and to identify potential areas for improvement. Apply the insights by focusing your donor appreciation efforts on those who have upgraded and implementing re-engagement tactics for those who have lapsed. To evaluate the impact of using this analysis, you can track metrics such as changes in retention rates, the number of donors moving up in segments year-over-year, and overall increases in donor revenue. Monitoring these success measures will help you assess whether your strategic adjustments based on the analysis are yielding positive results in donor engagement and fundraising outcomes.

## QX169 Segment Migration Detail (Last 7 FY)

*This report tracks the year-over-year segment migration of donors acquired over the last seven completed fiscal years, extending through the current active year to provide a real-time view of donor retention. It details individual donor pathways, identifying upgrades and lapses while distinguishing donors who have stopped giving in the past from those who simply haven't made a gift yet in the current unfinished year.*

This analysis tracks the migration of donors acquired over the last seven completed fiscal years, extending into the current active fiscal year. It provides insights into how donor segments evolve over time, allowing you to see patterns of retention, upgrades, and lapses. The analysis uses data from donor gifts, including gift amounts and dates, while also incorporating thresholds that categorize donors into segments: Top, Middle, and Bottom. This segmentation is critical as it helps you understand the financial contributions from different donor levels and identify potential areas for increased engagement. Key calculations involve determining the donor's segment for each fiscal year based on their total contributions. This is done by comparing their cumulative gift amount against established thresholds. It also identifies the initial segment of each donor at the time of acquisition, which provides a baseline for assessing how their engagement changes over the years. The analysis distinguishes between donors who have stopped giving and those who have yet to donate in the current year, offering a nuanced view of donor behavior. The strategic value lies in your ability to pinpoint which donor segments are most likely to upgrade or lapse. By understanding these patterns, you can tailor your outreach strategies, enhancing engagement with high-potential donors and re-engaging those who have lapsed. This targeted approach can significantly improve donor relationships, ultimately leading to increased contributions and long-term support for your organization. You should consider running this analysis at the end of each fiscal year or at the beginning of a new fundraising campaign. Fundraising directors and development officers should review it, as it contains valuable insights for strategizing donor engagement and retention efforts. Apply the insights by developing personalized communication strategies for different donor segments, focusing on lapsed donors with targeted re-engagement campaigns and recognizing those who have upgraded their giving. To measure the success of applying this analysis, track the improvements in donor retention rates and the rate of upgrades among previously identified segments. Additionally, monitor the response rates to targeted campaigns that arise from the insights provided through this analysis. By continuously evaluating these metrics, you can refine your strategies and enhance the effectiveness of your fundraising efforts.

## QX175 Top 50 Donor Profile Dashboard Pilot DB

*Pilot of a donor profile*

The Top 50 Donor Profile Dashboard Pilot DB analysis is designed to provide a comprehensive overview of your top donors from the previous fiscal year (FY-1), enabling you to gain valuable insights into their giving patterns and engagement history. This analysis utilizes data from your gifts and constituents databases, focusing specifically on donors who contributed during the last complete fiscal year. By ranking these donors based on their total contributions, it highlights the top 30 donors, offering a snapshot of their financial impact on your organization. Key calculations within this analysis include the total amount each donor contributed in FY-1 and their corresponding rank, which helps you identify your most significant financial supporters. Additionally, the analysis examines the first year a donor made a contribution, categorizing them based on their recent engagement patterns. For example, donors who gave for the first time in the last fiscal year are labeled as 'New', those who did not contribute in FY-2 but returned in FY-1 are marked as 'Recaptured', and ongoing contributors are considered 'Retained'. This classification is crucial for understanding donor retention and re-engagement trends. The strategic value of this analysis lies in its ability to help you tailor your donor engagement strategies. By identifying your top donors and understanding their giving history, you can develop personalized communication and stewardship plans. This analysis also allows you to segment donors based on their engagement status, which is essential for crafting targeted appeals and recognition programs that resonate with each group. To maximize the benefits of this analysis, consider running it at the beginning of each fiscal year to assess the previous year's donor performance. It should be reviewed by fundraising directors and development officers who are responsible for donor engagement strategies. By applying the insights gained, you can prioritize outreach efforts to high-impact donors and devise strategies to enhance donor retention and acquisition. Success measures for evaluating the impact of this analysis could include tracking changes in donor retention rates, measuring the growth in total contributions from top donors, and assessing the effectiveness of personalized engagement strategies in increasing donor satisfaction and loyalty. By regularly using this analysis, you can enhance your organization's fundraising effectiveness and strengthen relationships with key supporters.

## QX176 Buy Till You Die Source -Dash format

*This is a query to set up a Buy Till You Die intermediate processing file from your data. BTYD models (like BG/NBD or Pareto/NBD) do not use raw transaction logs; they require a summary matrix containing four specific metrics for each donor:Frequency (1$x$): Count of repeat gifts (total gifts minus 1). 2Recency ($t_x$): Time between the first and last gift. T ($T$): Time between the first gift and the current analysis date (how long they've been "alive" on your file). Monetary ($m_x$): Average gift amount (optional for basic retention models, but needed for LTV).*

This analysis is designed to create a foundational dataset for employing Buy Till You Die (BTYD) models, which are predictive tools used to estimate future donor behavior based on past actions. The analysis draws from the Gifts data, summarizing key metrics for each donor. It helps you understand the frequency of donations, the recency of donations, the donor's tenure with your organization, and the average gift amount. These metrics are crucial for predicting donor retention and lifetime value. Frequency is calculated by counting the number of gifts a donor has made minus one, indicating how often a donor has returned after their initial contribution. Recency is measured in weeks, showing the time elapsed between a donor's first and last gift. This metric helps assess how recently a donor has engaged with your organization. The T metric, also in weeks, represents the donor's tenure, providing context for how long they have been active. Monetary value is the average gift amount, offering insight into the typical donation size from each donor. The strategic value of this analysis lies in its ability to guide targeted donor engagement and retention strategies. By understanding these metrics, you can segment donors based on their giving patterns and tailor your communication efforts to enhance relationships. For example, donors with high frequency but low recency might be re-engaged with personalized messages or special campaigns. Understanding monetary value allows you to focus on high-value donors with tailored stewardship efforts. You should consider running this analysis periodically, such as quarterly or bi-annually, to keep your donor insights current. Development officers and fundraising directors should review the results to inform strategies and action plans. Applying these insights can include designing targeted campaigns for different donor segments or refining solicitation strategies to increase engagement and retention. To measure success, evaluate changes in donor retention rates, the number of repeat gifts, and the average donation amount over time. Additionally, monitor shifts in donor engagement levels and lifetime value. These indicators will help you assess the effectiveness of strategies informed by this analysis, ultimately enhancing your organization's fundraising outcomes.

**Type:** Cohort | Lifecycle: Retention | Time: Retrospective | Audience: Operational
**Segments:** All/None specified
**Variant Family:** Buy Till You Die (output_format variants)

## QX177 By Till You Die Std Query

*This is a standard output intermediate analytic for By Till You Die analysis. It will need to be pushed through a statistical model or Excel Solver for final processing.*

This analysis is designed to provide valuable insights into donor behavior, focusing on their giving patterns and engagement over time. By examining the data from your Gifts table, this analysis identifies the first and last gift dates for each donor, calculates the total number of gifts, and sums up the total giving amount. It utilizes a combination of donor statistics and constituent details to deliver a comprehensive overview of donor activity, which can guide strategic fundraising efforts. Key metrics in this analysis include frequency, recency, T (tenure), and monetary value. Frequency is calculated by subtracting one from the total number of gifts, indicating how often a donor has returned to make additional contributions after their initial gift. Recency measures the number of weeks between the first and last gift, providing insight into how recently a donor has been active. The T value represents the weeks between the first gift and the current date, offering a perspective on the duration of a donor's engagement with your organization. Monetary value is derived from the average transaction amount, revealing the typical size of donations from each donor. These metrics are critical as they allow you to segment donors based on their engagement level and financial contribution, enabling more targeted and effective fundraising strategies. This analysis is strategically valuable as it helps you understand donor lifecycles and predict future giving behavior. By identifying high-frequency donors or those with a high average gift size, you can prioritize efforts to cultivate these relationships further. Additionally, understanding recency and tenure can help you identify lapsed donors who may need re-engagement strategies to bring them back into active giving. To maximize the impact of this analysis, run it regularly to keep your donor engagement strategies current. Fundraising directors should review the results to adjust campaigns and prioritize donor outreach. Development officers can use the insights to tailor communications and stewardship activities, ensuring they resonate with donor preferences and behaviors. Evaluate the success of using this analysis by tracking changes in donor retention rates, the average gift size increase, and the overall growth in donation amounts. Monitoring these metrics over time will help you assess the effectiveness of your engagement strategies and refine them based on actual donor responses.

## QX178 Placeholder for future Dashboard

*Placeholder for another Pilot Dashboard Style Report*

This analysis is designed to provide insights into your top donors from the previous fiscal year, helping you better understand donor behavior and engagement. By using the Gift and Constituent data from your records, it identifies the top 30 donors based on their contributions in the last complete fiscal year, which is calculated to be from July 1 of two years ago to June 30 of last year. It ranks these donors by their total gift amounts, offering a clear view of your most significant supporters. Key calculations include the ranking of donors by total gift amounts in the last fiscal year (FY-1) and determining whether these donors are new, recaptured, or retained based on their giving patterns. The first gift year for each donor is tracked to classify them as 'New' if their first gift was in FY-1. If they did not give in the fiscal year before last (FY-2) but did in FY-1, they are 'Recaptured'. Otherwise, they are 'Retained', with potential adjustments based on their giving amounts. This categorization is crucial for tailoring your engagement strategies, as it helps you understand donor loyalty and acquisition. Strategically, this analysis allows you to focus your outreach efforts by highlighting those donors who are critical to your fundraising success. It provides a snapshot of donor longevity and identifies opportunities to deepen relationships with consistent supporters or rekindle engagement with those who have returned. Understanding whether a donor is deceased is also vital for respectful communication and planning. For actionable recommendations, run this analysis shortly after the fiscal year ends to have the most current data for planning. Fundraising directors and development officers should review it to identify key donors for personalized engagement strategies. Use the insights to develop targeted campaigns, such as appreciation events for retained donors or welcome initiatives for new ones. Success in using this analysis can be measured by tracking subsequent engagement levels, such as increased giving amounts or participation in fundraising events. Another indicator could be the conversion rate of 'Recaptured' donors into regular contributors. By consistently applying insights from this analysis, you can foster stronger donor relationships and improve the effectiveness of your fundraising efforts.

## 1.1: Year-over-Year Donation Trends

### QX89 Top Segment Gift Amount Trends (Annual) Analysis

*This analysis (often used as a report) provides a 15-year historical overview of your top donor segment across multiple KPI's.*

Top Segment Gift Amount Trends (Annual) How to use the Top Segment Gift Amount Trends (Annual) analysis This analysis tracks the annual giving patterns of your highest-value donors-your top segment-over the past 15 fiscal years. It draws from your Gifts, Constituents, and Thresholds data to identify, for each year, which donors qualified as Top based on their yearly giving meeting or exceeding a minimum threshold you set in your segment definitions. For each relevant fiscal year, the analysis calculates and displays several key metrics: number of unique top donors, total dollars contributed by this segment, as well as average and median individual gift size from those donors. You can use this analysis to understand not just the raw totals quickly, but crucially, how your top donor pool and their giving behaviors are evolving year over year. By focusing only on the years when each donor actually qualified as Top, you get an accurate view of true leadership-level support, rather than a diluted picture that includes lapsed or downgraded donors. Metrics like the average and median gift amount help you identify whether trends are being driven by a few very large gifts or broader increases within the segment. You should schedule this analysis for regular review as part of your Constituent Intelligence routines, especially before campaign planning, board meetings, or major donor strategy sessions. Fundraising directors, major gifts officers, and prospect managers will find it most useful for spotting shifts in top donor loyalty, flagging years with unusual spikes or dips, and identifying opportunities for targeted retention or upgrade efforts. Apply the insights by segmenting stewardship strategies for the most loyal top donors, designing outreach to recapture donors who have dropped out of the segment, and tailoring recognition programs based on actual giving patterns. To evaluate the impact of using this analysis, track measures such as year-over-year retention rates within your top segment, growth in total dollars from top donors, and the number of new donors entering the top tier. Ultimately, you should expect more strategic resource allocation, improved retention of your most valuable supporters, and stronger, data-informed relationships with your leadership donors.

## 1.2: Revenue Concentration Analysis

## QX40 Top 50% Donor Concentration Analysis

*This analysis analyzes your organization's revenue concentration, showing what percentage of your total donations comes from your top donor segments.*

Top 50% Donor Concentration How to use the Top 50% Donor Concentration analysis This analysis provides a focused view of how much your fundraising revenue is concentrated among your top donors, specifically by examining the cumulative giving of the top 5%, 10%, 15%,...up to 50% of your donor base over the current and prior fiscal years. Drawing on your Gifts data, it calculates each donor's total giving per fiscal year (aligned to your organization's July-to-June fiscal cycle), ranks donors by their giving, and then determines what proportion of your total fundraising comes from each 5% increment. For each segment (for example, the top 10% or 20% of donors), you'll see both dollar amounts and percentage contributions to overall giving, as well as a year-over-year comparison for understanding shifts in donor concentration. You should use this analysis to identify how reliant your fundraising outcomes are on your highest-contributing supporters and to spot trends in donor concentration over time. By tracking not only current-year but also prior-year-to-date giving for these donor segments, you can see whether donor engagement at the top of your pyramid is increasing or waning, and whether your base is broadening or narrowing. The analysis does not list individual donors, but if you supplement it with additional Constituent Intelligence data, the Top 100 and/or 1000 donor analytics you can do more granular analysis. You should review this analysis regularly-ideally, monthly or quarterly- as part of your Constituent Intelligence routines. It is especially valuable for development directors, major gifts officers, and anyone responsible for strategic planning. Use the findings to guide conversations in pipeline meetings, inform major donor portfolio assignments, and evaluate the effectiveness of cultivation efforts. To measure success, track changes in the concentration ratio over time and monitor whether targeted strategies are reducing over-reliance on a small group of donors while increasing the contribution from broader segments. This provides a concrete way to assess the resilience and health of your fundraising program.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational

## QX42 Top 100 Donor Concentration Analysis

*This analysis generates a ranked list of your top 100 donors from the last full fiscal year, showing their individual and cumulative impact on revenue.*

Top 100 Donor Concentration How to use the Top 100 Donor Concentration analysis This analysis identifies your top 100 donors by total giving in the most recently completed fiscal year. It calculates the proportion of total giving each donor represents, as well as the cumulative percentage as you move down the ranking. It draws on giving data linked to each constituent's unique ID and donor name, factoring in all gifts from  donors during the relevant fiscal year.  For each donor, you see not only their total giving, but also their rank, the percentage of the overall total they represent, and how that percentage accumulates across the top 100. By providing both the absolute and relative impact of each top donor, this analysis reveals the donor concentration of your organization. You can immediately see if a handful of donors make up a large portion of your fundraising, which is critical for risk assessment and engagement strategy. The inclusion of constituent ID and donor name allows you to easily cross-reference with other Constituent Intelligence sources or personalize stewardship and solicitation plans. The most important metrics here are the "Total Prior Year Gifts" for each donor, "Percentage of Total," and the "Cumulative Percentage." These show not just who gave the most, but how dependent your fundraising results are on your biggest supporters. A high cumulative percentage in the first few ranks signals a heavy reliance on a small group, which can inform both opportunity and risk management. Use this analysis to prioritize stewardship of your largest donors, identify prospects for deeper engagement, and identify vulnerabilities in your portfolio. Fundraising directors and major gifts officers are especially encouraged to review this as part of your Constituent Intelligence routines-ideally on a quarterly or annual basis-so you can proactively adjust cultivation, stewardship, and risk mitigation plans. Consider using the donor IDs to link with other engagement or wealth screening data for an even more targeted approach. To measure the success of applying this analysis, track changes in donor retention among your top 100, growth in cumulative giving, and improvements in diversification (a lower top-10 cumulative percentage over time). Integrating these insights into your regular development meetings will help ensure your fundraising pipeline remains strong, resilient, and responsive to your organization's long-term needs.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Operational

## QX44 Top 1000 Donors 3-Year Summary Analysis

*This analysis provides a comprehensive profile of your most valuable and sustained supporters, ranked by their total giving over the last three years.*

Top 1000 Donors 3-Year Summary How to use the Top 1000 Donors 3-Year Summary analysis This analysis provides a ranked list of your top 1,000 donors based on their total giving over the most recent three full fiscal years, helping you identify which individuals or organizations have contributed the most significant revenue in that period. This analysis is most useful for larger organizations with an active donor list of thousands per year. Smaller organizations can get the same value from a Top 100 Donor analytic. Drawing from your Gifts and Constituents data, it calculates and compiles for each donor their first and most recent gift dates and amounts, the largest single gift, total number of gifts, lifetime giving, and giving during the last three fiscal years. It also shows each donor's share of total revenue for the period, along with a running cumulative percentage, which allows you to see how concentrated your fundraising results are among your top supporters. By including milestones such as first and most recent gifts, the analysis helps you track donor engagement over time and spot key moments to acknowledge or deepen relationships. The calculation of Total Giving Last 3 FYs highlights your most currently engaged and impactful donors, while lifetime giving and gift frequency provide context for long-term loyalty. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. You should use it to identify donors who warrant special cultivation or recognition, ensure your stewardship strategies are focused on those with the highest impact, and uncover patterns—such as lapsed giving or major upgrades —that signal opportunities or risks. Development directors, major gifts officers, and stewardship managers should review this analysis together to coordinate personalized outreach strategies, set segmentation priorities for campaigns, and plan targeted renewal or upgrade asks. To evaluate the impact of using this analysis, track year-over-year retention and upgrade rates among your top 1,000 donors, monitor changes in the cumulative percentage of revenue contributed by this group, and assess improvements in personalized engagement activities. Success will be reflected in higher donor retention, increased activity in the major gift pipeline, and growth in total giving from this critical segment.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational
**Segments:** All/None specified | Scope: Individual Donor, Organization
**Variant Family:** Top Donor Concentration (variant variants)

# 1.5: Donor Lifecycle Analysis

## QX16 Average Tenure to Top Level Donor Analysis

*This analysis reveals the different journeys donors take to make their first major gift, providing a strategic roadmap for your development efforts.*

Average Tenure to Major Gift How to use the Average Tenure to Top Level Donor analysis This analysis tracks the progression of your donors from their very first gift to the moment they make a top-level or major gift, helping you understand how long it typically takes constituents to reach that key giving threshold. By linking gift histories from your Gifts and Constituents data, the analysis constructs a timeline for every donor, capturing when they made their initial contribution, the number of gifts it took before they became a major donor, and the total amount they contributed up to that point. The top-level or major gift threshold itself is dynamically set from your organizational segmentation criteria, ensuring you are working with definitions aligned to your fundraising strategy. You will see summary metrics for groups of donors based on the size of their first gift (Top, Middle, or Bottom segments), how quickly they reached major donor status (e.g., Fast Track, Standard, Slow Build, or Long Cultivation ), and averages such as years taken, number of gifts needed, and initial and major gift amounts. These metrics are crucial for understanding not only the pace and pattern of donor development, but also for identifying which donor segments are more likely to upgrade sooner and which require longer-term cultivation. Use this analysis to refine your engagement strategies. For example, if you notice that most major donors began with small gifts and required several years and multiple touchpoints before upgrading, you might focus your stewardship efforts and targeted communications on similar early-stage donors. Conversely, if certain donors upgrade rapidly, your team can flag and prioritize those for fast-track cultivation. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines, ensuring you adapt to shifts in donor behavior over time. Development officers and fundraising directors should review this analysis together, using the insights to tailor stewardship plans, set realistic expectations for pipeline development, and adjust segmentation for annual appeals and major gift prospecting. Success can be measured by monitoring whether more donors are reaching major gift thresholds in shorter periods, if stewardship interventions increase average upgrade rates, and by tracking improvements in retention and lifetime value among those highlighted by the analysis. Ultimately, you can use this as a foundation for more personalized, data-driven outreach and for strengthening your organization's overall donor journey.

**Type:** Trend | Lifecycle: Onboarding, Retention | Time: Retrospective | Audience: Operational
**Segments:** Top | Scope: Segment
→ Also Try: QX164 Average Tenure to Major Gift Detail; QX23 Average Time to Top Segment Donor -First; QX9 $1MM Threshold Analysis

## QX164 Average Tenure to Major Gift Detail

*This analysis covers all donors from their first gift through their first gift that meets the minimum annual threshold for Top Segment Donors. Example, if the minimum threshold for annual total giving for your Top Segment is $7500, then it looks for the first single gift by a donor that is greater than or equal to $7500.*

This analysis provides a detailed breakdown of the donor journey from their first gift to their first major gift, specifically focusing on those gifts that meet or exceed a predefined threshold for major giving. By leveraging data from your Gifts and Constituents tables, it constructs a chronological timeline of gifts for each donor, allowing you to identify key milestones in their giving history. The analysis highlights not only the specific amounts and dates of gifts but also categorizes donors based on their initial contributions, helping to segment them into different giving tiers. Key calculations in this analysis include the identification of each donor's first gift, the first major gift that meets the minimum threshold, and the time it takes for donors to reach this level of giving. The "years to major gift" metric shows how long it took for a donor's giving to evolve into a major gift, while the cumulative gifts at the time of the major contribution provide insight into their overall engagement and commitment to your organization. Understanding these metrics allows you to identify patterns in donor behavior, which can inform your engagement strategies. Strategically, you can use this analysis to enhance donor relationships by tailoring your engagement based on their giving history. For instance, if you notice that donors in a specific segment take longer to reach major gift status, you might consider implementing targeted cultivation strategies for those groups. This approach allows for a more personalized interaction and can help foster loyalty and increased giving over time. You should run this analysis periodically, especially after major fundraising events or campaigns, as it can provide fresh insights into donor behavior following significant outreach efforts. Development officers and fundraising directors should review the findings to refine their strategies and ensure that they are adequately nurturing relationships with donors at various stages of their giving journey. To measure the success of implementing insights from this analysis, you can track the increase in major gifts over time, the retention rates of donors who have been classified into specific segments, and the time it takes for donors to move from one giving tier to another. Monitoring these metrics will help you assess the effectiveness of your engagement strategies and adapt them as necessary to optimize donor relationships and fundraising outcomes.

## 2.1: Outright Lapse Mitigation YOY

## QX10 Top Donor Gift Count Trends Analysis

*This analysis identifies top donors whose giving frequency has declined, which can be an early indicator of waning engagement.*

Top Donor Gift Count Trends How to use the Top Individual Donor Gift Count Trends analysis This analysis helps you identify your top individual donors whose number of gifts in the most recent fiscal year has dropped below their own three-year giving average. It draws from your Gifts and Constituents data, using fiscal year segmentation and customizable giving thresholds to focus only on those donors who meet your organization's criteria for "top" giving levels. For each donor, you see key metrics-such as their total giving in the last full fiscal year, their number of gifts for each of the past four fiscal years, and their average number of gifts per year in the three years prior to the last completed year. The analysis highlights donors who gave less frequently in the most recent year than their established pattern, flagging them for your attention. You can use the supporting information, including donor name, total giving amounts, and historic averages, to craft more personalized outreach. For instance, seeing a donor's multi-year giving totals alongside their recent decline in gift count allows you to tailor communications, perhaps acknowledging their past generosity, expressing appreciation, and inquiring about changes in their engagement or interests. This level of Constituent Intelligence helps you move beyond simple dollar tracking to a more nuanced understanding of donor behavior. Key metrics include "Gifts (Last Full FY)", "Avg Gifts (Prior 3 FYs) in Giving Years", and "Last FY Count Below 3 yr Avg". Focusing on donors with a recent drop in gift frequency lets you proactively address potential disengagement, uncover underlying causes, and take steps to re-engage them before the decline becomes permanent. You should have development officers and gift officers review this analysis periodically-ideally quarterly or after each fiscal year close-as part of your Constituent Intelligence routines. Apply the insights to prioritize stewardship with top donors who may require extra attention, inform call lists for personalized outreach, or flag individuals for leadership engagement. Success can be measured by tracking subsequent changes in gift frequency and overall giving among the flagged donors, monitoring retention rates, and assessing whether targeted outreach results in renewed or increased engagement in the next fiscal cycle. By integrating these insights into your workflow, you strengthen donor relationships and help sustain your organization's fundraising momentum.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational
**Segments:** Top | Scope: Individual Donor
**Variant Family:** Donor Gift Count Trends (segment variants)
**Collections:** Lapse Prevention Toolkit
→ Run First: QX172 Segmentation Break Points

## QX11 Middle Donor Gift Count Trends Analysis

*This analysis (often used as a report) identifies middle donors whose giving frequency has declined, which can be an early indicator of waning engagement.*

Middle Donor Gift Count Trends How to use the Middle Individual Donor Gift Count Trends analysis This analysis helps you identify middle-tier individual donors whose giving activity in the most recent fiscal year has declined compared to their own giving averages over the prior three fiscal years. It examines annual gift counts and total giving amounts, focusing exclusively on donors whose most recent fiscal year falls within the organization's defined middle giving threshold. By tracking year-over-year changes in donor activity, you gain targeted insights into potential lapses or reductions in engagement among this important segment. The data underlying this analysis includes individual constituent giving histories drawn from your Gifts and Constituents datasets, along with your organization's custom-defined giving thresholds for donor segmentation. For each donor, the analysis calculates their total number of gifts and total amount given per fiscal year over four fiscal years.  It flags those whose gift count in the last full fiscal year falls below their average gift count for the preceding three years, highlighting donors whose participation is slipping, even if their overall giving remains within the middle tier. Key metrics displayed include the donor's gift counts for each of the past four fiscal years, their total giving in the most recent full fiscal year, and the rolling three-year average for both gifts and giving. These details not only reveal trends but also provide context for outreach. Supporting information, such as the donor's name and organizational affiliation, is included to help you tailor your follow-up and personalize stewardship efforts. Use this analysis to prioritize proactive engagement with at-risk middle donors before their support diminishes further. It is recommended that development officers and fundraising managers review this analysis regularly as part of their Constituent Intelligence routines. When you see a donor flagged, consider targeted outreach to thank them, understand any changes in their circumstances, or offer new opportunities for involvement based on their giving history. To apply these insights, assign portfolio reviews to frontline fundraisers, incorporate these findings into stewardship touchpoints, and use the supporting data to personalize communications. Success can be measured by tracking the retention and re-engagement rates of these flagged donors, monitoring whether their gift counts rebound in subsequent years, and assessing whether personalized outreach leads to more consistent or increased giving among the middle donor segment.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational
**Segments:** Middle | Scope: Individual Donor
**Variant Family:** Donor Gift Count Trends (segment variants)
**Collections:** Lapse Prevention Toolkit
→ Run First: QX172 Segmentation Break Points

## QX12 Bottom Donor Gift Count Trends Analysis

*This analysis (often used as a report) identifies bottom donors whose giving frequency has declined, which can be an early indicator of complete lapse.*

Bottom Donor Gift Count Trends How to use the Bottom Individual Donor Gift Count Trends analysis This analysis identifies individual donors whose giving activity places them in the bottom segment of your donor base, based on customized thresholds that you define within your Constituent Intelligence system. It tracks the number of gifts these donors have given over the past four fiscal years and flags those whose number of gifts in the most recent fiscal year has dropped below their average giving frequency from the prior three years. By focusing on this specific group, you can quickly pinpoint donors who are already low on the giving spectrum and are now showing signs of further disengagement. The analysis draws on your gifts and constituent data, leveraging annual gift counts and total giving for each donor. Key metrics include the total amount given in the last fiscal year, the count of gifts in each of the past four years, the three-year average of gift counts (excluding the most recent year), and whether the activity in the last year dipped below this average. Supporting columns, such as donor names and giving amounts for prior years, provide context that enables you to tailor outreach and stewardship, which is helpful when referencing specific giving histories or personalizing your communications. The core insight is the early detection of at-risk bottom-segment donors whose engagement is slipping. This allows you to intervene with targeted messaging or stewardship before these donors lapse completely. Fundraising directors and donor relations staff should review this analysis, especially as part of monthly or quarterly Constituent Intelligence routines, to prioritize re-engagement efforts. For example, you might assign stewardship specialists to reach out to flagged donors with personalized thanks or updates, or test new engagement tactics to reignite their interest. To maximize value, measure success by tracking the retention and reactivation rates of these at-risk donors after outreach, as well as changes in their subsequent giving and engagement. Monitoring these indicators will help you continually refine your strategies and ensure that your limited resources are focused where they can have the greatest long-term impact.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational

**Variant Family:** Donor Gift Count Trends (segment variants)
**Collections:** Lapse Prevention Toolkit
→ Run First: QX172 Segmentation Break Points

## QX28 Bottom Donor Early Warning Summary Analysis

*This analysis (often used as a report) provides a high-level summary of the retention risk across your recently acquired, entry-level donors.*

Bottom Donor Early Warning Summary How to use the Bottom Donor Early Warning Summary analysis This analysis helps you proactively identify and address retention risks among your newest and most modest donors-those whose first gift falls within your organization's lower giving threshold. Drawing on recent gift activity from the past 18 months, the analysis evaluates each donor's giving history, calculates the time since their first and most recent gifts, and segments their risk of lapsing into clear categories such as High Risk, Medium Risk, or Low Risk. It layers in a value dimension, showing whether a donor is a high, medium, or low value contributor within the bottom segment, based on how their first gift compares to your bottom donor threshold. You'll see aggregated insights, such as the number of donors in each risk and value group, their average and median giving amounts, the average number of gifts, and the time elapsed since their first and last donations. This not only flags donors at risk of lapsing but also pinpoints those who may be undervalued or overlooked, allowing you to prioritize outreach. By combining risk level with value, you can tailor engagement strategies—such as prioritizing personal outreach for high-value, high-risk individuals, or automating campaigns for those showing early warning signs. The analysis is especially useful for front-line fundraisers and development managers. You should use it to inform segmentation for targeted stewardship, identify which lapsed or near-lapsed bottom-tier donors to prioritize for re-engagement, and refine your donor journey strategies. For example, you might assign high-risk, high-value donors to a personalized call campaign, while medium-risk groups can be nurtured through automated email touchpoints. Team leads can incorporate these results into regular Constituent Intelligence reviews to ensure your retention efforts are data-driven and responsive. To evaluate the impact, measure improvements in second gift rates among bottom-tier donors, reductions in donor lapse rates, and increased reactivation of those previously flagged as high risk. Over time, you should see stronger retention, higher lifetime value, and more efficient use of your engagement resources as a result of integrating this analysis into your Constituent Intelligence routines.

# 2.3: Within-Segment Growth

## QX13 Gift Count Trends Among All Current Donors Analysis

*This report provides a comprehensive view of gift frequency trends for every donor who gave last year, allowing for broad, segmented analysis.*

Gift Count Trends Among All Current Donors How to use the Gift Count Trends Among All Current Donors analysis This analysis provides a comprehensive overview of how the giving patterns of your current active donors have evolved over the past four fiscal years, with a particular focus on the number of gifts made each year and how recent activity aligns with previous trends. By examining all donors who made a gift in your most recently completed fiscal year, you can quickly identify whose engagement is increasing, holding steady, or declining-essential for sustaining and growing donor relationships. The analysis draws on gift transaction data, using fiscal year calculations aligned to your organization s calendar, and summarizes each donor s annual gift count and total giving for up to four years. For each active donor, you'll see their constituent ID and name, giving totals for the last fiscal year and the three prior years, average gifts per year in the previous three-year period, and a flag indicating whether their gift count last year dropped below their three-year average. Supporting fields such as the donor's name and organization affiliation are included to help you quickly personalize your outreach and tailor stewardship strategies. Key metrics include the number of gifts per year, the average annual gift count over the previous three years, and a comparison of last year's gifts to that average. These calculations matter because a downturn in gift frequency can signal waning engagement or satisfaction, while increases may highlight donors ripe for cultivation or upgrade. The inclusion of total and average giving amounts provides further context, allowing you to see if lower gift counts are offset by larger gifts or if both frequency and value are declining. Strategically, you can use this analysis to prioritize intervention with donors whose participation is slipping, ensuring you don t lose valuable supporters. Development officers can identify donors whose giving patterns suggest a readiness for deeper involvement, while stewardship staff can recognize and acknowledge those who maintain or increase their support. You should review this analysis regularly, at a minimum quarterly, ideally as a core part of your Constituent Intelligence routines. Development directors, gift officers, and stewardship managers should use it to inform portfolio assignments, outreach planning, and personalized communication. For example, donors flagged as giving less frequently may benefit from a personal call or targeted stewardship. At the same time, those with growing engagement might be strong candidates for special appeals or leadership giving programs. Evaluate success by tracking year-over-year retention rates, the percentage of donors whose gift counts rebound after targeted outreach, and the number of at-risk donors re-engaged as a result of your interventions. Monitoring these measures will help ensure your use of Constituent Intelligence directly supports stronger donor relationships and improved fundraising outcomes.

**Type:** Trend | Lifecycle: Portfolio Management | Time: Retrospective (Multi-Year) | Audience: Operational

# 2.7: New Donor Journey thru Third Gift

## QX19 Second to Third Gift Detail Analysis

*This analysis creates a prioritized action plan for the critical and often overlooked group of donors who have given exactly twice.*

Second to Third Gift Detail How to use the Second to Third Gift Detail analysis This analysis is designed to help you understand and act on the giving patterns of donors who have made exactly two gifts to your organization. It examines every donor's sequence of giving and isolates those whose second gift occurred within the last five years, providing a focused view of recent two-time donors. For each donor, the analysis details the dates and amounts of both gifts, segments them by the combined value of their giving, and classifies their giving trend-whether they gave more, less, or the same amount the second time. It also calculates the number of months that have passed since their second gift, enabling you to prioritize your outreach timing. You will see key metrics, such as Value Segment (Top, Middle, Bottom) based on organizational thresholds, Months Since 2nd Gift, and Giving Trend (Significant Increase, Modest Increase, Same Amount, Decrease). These calculations are critical, as they reveal not only the donor's short-term engagement but also their potential for future giving and the urgency of providing tailored stewardship. The analysis then translates these metrics into actionable priorities, ranging from CRITICAL (immediate intervention suggested for lapsed top donors) to HIGH (major gift officer follow-up for recent, high-value givers). Alongside this core information, you will also find fields such as the donor's name (from either the individual or organizational columns), which are not essential to the calculation but are invaluable when preparing personalized communications. This enables you to approach each donor with messages that reflect both their giving history and their unique relationship to your organization. You should use this analysis to identify which two-time donors are most at risk of lapsing, which are showing increased engagement, and which require immediate or personalized follow-up. Fundraising directors, principal gift officers, and stewardship coordinators should review it regularly to prioritize outreach, allocate resources effectively, and design re-engagement or thank-you campaigns that match each donor's profile. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. To evaluate your success, track the re-engagement rates of donors flagged for high or critical action, monitor the conversion of two-time donors to third gifts, and assess the overall increase in retention rates for this segment. By acting on these insights, you will strengthen donor relationships, improve conversion from second to third gift, and elevate the effectiveness of your Constituent Intelligence strategies.

## QX78 First to Second Gift Speed Curve (3 Year Look) Analysis

*This analysis shows the cumulative number and percentage of first-time donors who give again within specific time windows (e.g., 30, 90, 360 days).*

First to Second Gift Speed Curve (3 Year Look) How to use the First to Second Gift Speed Curve (3 Year Look) analysis This analysis helps you understand how quickly new donors make their second gift after their initial contribution over the past three years. It draws from your Gifts and Constituents data, specifically focusing on donors whose first gift occurred within the last 36 months. For each new donor, it measures the number of days between their first and second gift, then aggregates these results to show the percentage of donors who return with a second gift within various time windows: 30, 60, 90, 180, and 360 days. The central insight revealed by this analysis is the pace at which your organization converts first-time donors into repeat supporters —a key indicator of donor engagement and the effectiveness of your stewardship efforts. The analysis provides both the cumulative count of donors who made a second gift within each time frame and the corresponding conversion rate as a percentage of all new donors in the period. By examining these metrics, you can determine how your early stewardship and donor communications are performing and identify areas where opportunities for improvement exist. Use this analysis to benchmark the health of your donor pipeline and identify trends or gaps in your donor retention strategies. Fundraising directors, annual giving managers, and stewardship coordinators should review these insights regularly, ideally as part of their Constituent Intelligence routines. If you notice that a high percentage of second gifts occur within the first 60 days, this indicates effective early engagement. Conversely, a slow conversion curve may prompt you to revisit your welcome series or stewardship touches for new donors. To act on these insights, consider segmenting new donors who have not yet made a second gift and prioritizing personalized follow-ups within the first 90 days. Development officers should also analyze which outreach tactics correspond with higher conversion rates and replicate those approaches to maximize effectiveness. Success should be measured by tracking improvements in your cumulative conversion rates over time and correlating these gains with any changes in your donor communication or stewardship strategies. Ultimately, this analysis empowers you to strengthen donor relationships, increase retention, and grow sustainable support for your mission.

## QX79 Second to Third Gift Speed Curve (3 Year Look) Analysis

*This analysis measures the conversion speed and rate for donors moving from two donations to three, focusing on a cohort from the last three years.*

Second to Third Gift Speed Curve (3-Year Look) How to use the Second to Third Gift Speed Curve (3 Year Look) analysis This analysis helps you understand how quickly your donors are making their third gift after their second gift, focusing on those whose second gift was within the past three years. It draws on giving histories from your Gifts and Constituents data. The analysis identifies each donor's second and third gifts, calculates the number of days between them, and then groups the results into cumulative time windows: within 30, 60, 90, 180, and 360 days after the second gift. For each window, you see both the number of donors who made their third gift within that timeframe and the corresponding conversion rate as a percentage of all eligible second-gift donors. The key metric here is the conversion rate at each time window, which shows you the proportion of your recent second-gift donors who move on to a third gift—and how quickly. This query includes columns showing how third gift conversions have trended over the last three years. This is a powerful way to reveal patterns in donor retention and momentum, highlighting how effective your engagement strategies are in turning new or renewing supporters into loyal, repeat givers. Use these insights to evaluate your stewardship efforts and tailor your follow-up communications to increase the likelihood of securing a third gift. You can take action by having your development officers and donor relations teams review this analysis, with a particular focus on the timeframes where conversion rates drop off. Use this information to design targeted outreach for donors who have recently made a second gift, such as sending timely thank-you notes or providing tailored impact updates within the first 30-90 days. Additionally, you may want to segment your stewardship strategies based on the speed of giving revealed here, prioritizing rapid follow-up for those most likely to convert quickly. As part of your Constituent Intelligence routines, this analysis is recommended to be reviewed periodically, so you can benchmark progress and adjust tactics in real time. To measure your success, track whether conversion rates at each time window increase over subsequent review periods, and monitor whether more donors are reaching their third gift faster. Improvements here should correlate with higher overall donor retention and lifetime value, providing clear evidence that your engagement strategies are working.

# 3.1: Health Checks

## QX71 Rolling 12 Mo Donor Count and Total Giving Analysis

*This analysis looks at five years of acquisition data to reveal the seasonal rhythm of your fundraising program across all donors*

Rolling 12 Mo Donor Count and Total Giving Analysis How to use the Rolling 12 Mo Donor Count and Total Giving Analysis analysis This analysis tracks donor engagement and giving patterns by calculating how many unique supporters have donated and how much has been given in each rolling 12-month period, over the last three years. For each month in the analysis period, you see the number of active donors, the total number of gifts, and the overall giving amount contributed within the prior 12 months. These key metrics allow you to monitor shifts in donor participation, spot trends in giving, and quickly identify whether your donor base and revenue are growing or declining. The rolling 12-month counts are especially valuable because they smooth out seasonal fluctuations and campaign spikes, providing a clearer view of sustained engagement. The Active Donors (12mo) metric helps you understand donor retention and acquisition effectiveness, while Total Giving (12mo) highlights overall fundraising health. Reviewing this analysis as part of your Constituent Intelligence routines ensures that you catch emerging patterns—such as a drop in active donors or a surge in total giving—before they impact your annual goals. You should schedule regular reviews of this analysis for both development officers and leadership, particularly during planning meetings and following major campaigns. Utilize the insights to tailor stewardship strategies, refine acquisition or reactivation efforts, and establish data-driven goals. For example, if you notice a decline in active donors despite steady giving, investigate which segments are lapsing and develop targeted re-engagement plans. If total giving is rising but the donor count remains stable, consider strategies to broaden your base rather than relying on a few large gifts. Success can be measured by improvements in donor retention rates, growth in the 12-month active donor count, and increases in total giving over time. Consistently applying these insights will support more strategic fundraising, deeper donor relationships, and a stronger foundation for long-term philanthropy.

## QX104 Current Fiscal Year results vs Monthly Fundraising Baseline Analysis

*This is a monthly performance-pacing analysis that serves as a diagnostic tool for your entire fundraising program.*

CFY results vs Monthly Fundraising Baseline How to use the CFY results vs Monthly Fundraising Baseline analysis This analysis provides a month-by-month comparison of your current fiscal year's (CFY) fundraising results against a three-year historical monthly average, enabling you to evaluate your fundraising performance in real time. Drawing on your gift transaction history, it classifies each donor's giving by fiscal year and tracks their status as New, Retained, or Recaptured. For every month, you see actual giving totals for the CFY alongside the average giving for that month over the past three years, broken out by donor status. This allows you to quickly identify trends, such as whether you are retaining more donors or increasing new donor acquisition, and pinpoint months when you are outperforming or falling behind your historical norms. You can use this to understand not only how much you're raising each month compared to previous years, but also the quality of that revenue, specifically, whether growth is coming from loyal supporters, newly acquired donors, or lapsed donors returning. The percent variance metric highlights where you are excelling or underperforming, allowing for timely interventions. For example, if actual retained giving lags behind the baseline, you might prioritize stewardship or recapture efforts. The analysis is designed for strategic review by development directors, annual giving managers, and fundraising teams who want to optimize revenue and donor relationships. You should consult it regularly-ideally each month-as part of your Constituent Intelligence routines. Use the breakdown by donor status to tailor your engagement strategies: if new giving is up but retained giving is down, shift your focus to stewardship; if recaptured giving spikes, analyze what reactivation tactics were effective and replicate them. Sharing these insights in monthly meetings ensures all stakeholders are aligned and can act promptly. To measure the success of applying this analysis, track improvements in donor retention, growth in monthly giving versus baseline, and the number of months where you exceed your historical averages. Ultimately, success is measured by a more resilient and diversified donor base, as well as higher long-term fundraising performance.

## 1.1: Year-over-Year Donation Trends

### QX171 Linchpin Individual Donors -Analysis Year

*This shows the individual donors who make up each category in the Linchpin Report. It compares their giving in the last full fiscal year to their giving in the year prior to that.*

The Linchpin Individual Donors - Analysis Year is designed to help you identify and understand the behavior of key individual donors by segmenting them based on their donation patterns over two fiscal years. This analysis uses donation data, including the amounts and dates of gifts, to categorize donors into segments such as Top, Middle, and Bottom based on their contribution levels. It also tracks changes in their giving patterns, identifying whether donors have increased, decreased, or maintained their support, or if they are new, recaptured, or lapsed donors. The analysis focuses on several important metrics: the total amount donated by each constituent in the current and prior fiscal years, and the movement category that highlights changes in donor behavior. These metrics are critical because they enable you to see not just the amount of revenue generated by a donor, but also how their giving is evolving. Such insights help in identifying potential risks, like donors who may lapse, as well as opportunities to strengthen relationships with those who are increasing their contributions. This analysis is strategically valuable because it allows you to tailor your engagement strategies based on donor behavior. For instance, you can prioritize outreach to top donors who have decreased their giving to understand the cause and potentially reverse the trend. Similarly, recognizing new or recaptured donors allows you to nurture these relationships early on, potentially increasing their lifetime value. You should run this analysis annually, ideally at the end of your fiscal year, to review donor performance and plan engagement strategies for the upcoming year. Fundraising directors and development officers should review the results to ensure that engagement strategies are aligned with donor behavior. The insights can be applied by developing targeted communication strategies for each donor segment, such as personalized thank-you notes for increased donors or special recognition for top donors. To measure the success of using this analysis, track the retention rate of donors identified as at-risk of lapsing and the increase in donations from new and recaptured donors. Additionally, monitor changes in donor segment sizes over time to evaluate if your engagement strategies are effectively moving donors up the giving ladder. This will help ensure that your strategic adjustments are positively impacting donor relationships and overall fundraising performance.

## QX173 Linchpin Indiv Donor Current FYTD Enriched

*This analytic looks at all of the donors represented in the waterfall analysis that made up last fiscal year's results and examines them individually to see how gifts in the current active fiscal year compare to their gifts in the last fiscal year over the same time frame. This query does not include data on New donors whose first gift is in the current Fiscal Year. It includes additional enrichment columns with historical giving info on each donor.*

This analysis is designed to provide a comprehensive view of individual donors who contributed in the last fiscal year and how their giving in the current fiscal year compares to the same period last year. It excludes new donors who made their first gift in the current fiscal year, focusing instead on those with a giving history. By enriching the data with historical giving patterns, the analysis helps identify trends and opportunities for engagement. The key calculations in this analysis include segmenting donors into top, middle, and bottom categories based on donation thresholds from the previous fiscal year. It also tracks year-to-date (YTD) giving performance, compares it with the same period last year, and evaluates changes in donor behavior. Metrics such as total lifetime giving, average annual giving over the last three fiscal years, and consecutive years of giving are calculated to provide a deeper understanding of each donor's commitment. The analysis categorizes donors into movement categories like 'Increased', 'Decreased', 'Lapsed', and 'Recaptured', helping you track shifts in donor engagement over time. Strategically, this set of analyses allows you to tailor your donor engagement strategies more effectively. By understanding donor behavior changes, you can identify which donors are increasing their giving and might be ready for more targeted cultivation. You can also pinpoint lapsed donors who require re-engagement and those whose giving has decreased, signaling a need for relationship repair or re-assessment of your value proposition to them. For actionable recommendations, consider running this analysis quarterly to stay updated on donor trends and adjust strategies promptly. It should be reviewed by fundraising directors and development officers who can use these insights to guide donor communication and engagement strategies. Applying these findings can improve donor retention rates and increase revenue by focusing efforts where they are most needed. Success measures for this analysis include tracking the number of lapsed donors who become active again, the increase in average gift size among identified 'Increasing' donors, and overall improvements in donor retention rates. Additionally, monitoring the growth in total revenue from the 'Top' and 'Middle' segments can indicate successful application of the insights derived from this analysis.

## QX180 Global Revenue Bridge Waterfall

*This high level waterfall analysis looks at the overall non-segmented revenue picture year over year. It is different from the segmented waterfall analysis which will not visually reconcile because some donors move between segments year over year. This waterfall ignores segments and can be used as a check.*

The Global Revenue Bridge Waterfall analysis provides a comprehensive view of your nonprofit's revenue changes over multiple fiscal years, without segmenting donors into categories. By examining donor contributions year over year, you gain clarity on overall revenue performance trends and can verify the accuracy of segmented analyses, where donors may move between categories. This analysis uses data from your Gifts table, focusing on the "Gift Amount" and "Gift Date" for each donor, identified by "Constituent ID". It calculates the total funds received from each donor within defined fiscal years, which run from July 1 to June 30. By comparing donor contributions over consecutive fiscal years, the analysis classifies donors into categories: New, Lapsed, Recaptured, Increased, Decreased, and Same, based on their giving patterns. Key metrics include the total revenue from the prior year, and the gains or losses from each donor category, such as revenue gained from new donors or lost from lapsed donors. These metrics are crucial because they help you understand where your revenue is coming from and where it is potentially being lost, allowing you to pinpoint areas for growth or improvement. Strategically, this analysis helps identify trends in donor behavior and revenue flow, providing a high-level view of your organization's financial health. By understanding these trends, you can develop targeted strategies to retain donors, re-engage lapsed donors, and attract new ones. This holistic view supports budgeting, forecasting, and strategic planning efforts. You should run this analysis at the end of each fiscal year to assess overall performance and identify key drivers of revenue change. Leadership teams, including fundraising directors and development officers, should review it to align strategic initiatives with identified trends. Applying insights from this analysis can enhance donor retention efforts, optimize fundraising campaigns, and improve your organization's financial stability. To measure success, track the variance check, ensuring it remains consistently near zero, which indicates an accurate and balanced financial overview. Additionally, monitor changes in donor categories over time to assess the effectiveness of engagement strategies and adjust them as necessary. By regularly using this analysis, you can foster stronger donor relationships and drive sustainable growth for your organization.

## QX142 Revenue Opportunity Analysis

*Identifies areas of focus to deliver improved fundraising outcomes from your existing donor base*

The Revenue Opportunity Analysis The Revenue Opportunity Analysis analytic provides visibility into the key levers that can be used to drive increased fundraising performance outcomes. It focuses on seven "levers" that fundraising teams have access to across their three Active Donor segments (Top, Middle, and Bottom), based on annual giving totals per donor. There is a chart and supporting data for each of the seven levers. Fundraising teams should analyze these and prioritize resources based on the amount of fundraising revenue that each lever could impact. For example, if the organization is having to replace significant dollars from the Top segment donors each year because of high lapse rates in this segment, they could focus resources on an enhanced stewardship program, or add additional senior development officers so that those top donors have a more personal relationship with the organization. This analytic should be part of annual strategic planning and resource allocation.

**Type:** Diagnostic | Lifecycle: Portfolio Management | Time: Retrospective | Audience: Advanced
**Segments:** All/None specified | Scope: Organization, Segment
**Collections:** New Development Director Starter Kit

## QX142 Revenue Opportunity Analysis

*This analytic displays revenue gains and loses YOY from each of the seven CI Priorities and can be used to set targets for the current FY.*

This analysis provides a comprehensive view of donor revenue trends year-over-year (YOY) across three segments-Top, Middle, and Bottom-based on the organization's seven CI Priorities. It leverages data from the Gifts and Thresholds tables, focusing on gift amounts and donor engagement patterns over the past decade. By examining revenue gains and losses, you can set informed targets for the current fiscal year, facilitating strategic planning and resource allocation. Key calculations in the analysis include the total revenue generated by each donor segment, the count of donors in each category, and the classification of donor movements into categories such as Lapsed, New, Recaptured, Increased, Decreased, and Same. These metrics reveal not just how much revenue is coming in but also provide insights into the health of your donor relationships. For example, a high number of lapsed donors can signal a need for re-engagement efforts, while an increase in new donors highlights successful outreach or campaigns. Using this analysis strategically allows you to make data-driven decisions to enhance donor engagement and retention. For instance, if you notice a significant number of lapsed donors from the Top segment, you can prioritize targeted re-engagement initiatives to win them back. Conversely, if you see a surge in revenue from new donors, you might want to invest in onboarding strategies that deepen their connection to your mission. You should consider running this analysis after the fiscal year ends and at key planning intervals throughout the year, ideally at the start of new campaigns or during strategic review meetings. It would be valuable for fundraising directors and development officers to review this analysis to align fundraising strategies with donor behaviors and revenue trends. As you implement insights from this analysis, measure success through metrics such as increased donor retention rates, growth in new donor acquisition, and overall revenue growth compared to prior years. Tracking these indicators will help you evaluate the effectiveness of your engagement strategies and ensure you are responding proactively to donor needs.

## 1.5: Donor Lifecycle Analysis

### QX35 All Donors 5-Year Score Summary Thru Current Fiscal Year Analysis

*This analysis provides a comprehensive, high-level summary of the giving patterns across your entire donor file across a number of KPIs.*

All Donors 5-Year Score Summary Thru CFY How to use the All Donors 5-Year Score Summary Thru CFY analysis This analysis provides you with a concise, data-driven overview of every donor's annual giving patterns over the past five fiscal years, summarized up to the current fiscal year (CFY). It pulls from your core Constituent and Gift data, calculating yearly totals as well as a five-year engagement score for each donor. This score is a four-character code that reflects each donor's behavior year-over-year, such as whether they are a new donor (N), retained donor (R), increased their annual giving YOY(I), decreased their annual giving YOY (D), lapsed (L), or have stayed at the same giving level (E). By aggregating these Scores, the analysis segments your entire donor base into clear behavioral groups, simultaneously highlighting trends like positive momentum, neutrality, or areas of concern. You can use this analysis to quickly identify how many donors are increasing their support, maintaining their commitment, or showing signs of disengagement. The scoring methodology provides visibility into the number of donors who may be ready for an upgrade or require special stewardship. The analysis summarizes these patterns across all donors, giving you a strategic overview of your portfolio's health, and can be filtered or extended with additional constituent details to tailor your outreach. Key calculations include rolling fiscal year gift totals, lifecycle coding, and behavioral indicators. These metrics matter because they reveal not just who is giving, but how their engagement is evolving-critical insights for prioritizing cultivation, solicitation, and stewardship efforts. The Indicator field further distills this, flagging donors for positive attention or concern at a glance. You should schedule this analysis for regular review by both fundraising directors and frontline gift officers, integrating it into your Constituent Intelligence routines. Use the insights to prioritize meetings, shape personalized appeals, and design re-engagement strategies for lapsed or declining donors. For example, development officers can focus on donors with positive indicators for upgrade asks, while stewardship teams can intervene with Possible Concern  donors to prevent further attrition. Success can be measured by tracking changes in donor retention rates, growth in average gift size among Positive  segments, and reductions in the number of lapsed or downgraded donors over time as a result of targeted actions inspired by this analysis.

## QX37 All Donors Score Summary -Last 5 years thru Last Fiscal Year Analysis

*This analysis summarizes the behavioral patterns of all donors who have been active within the last five years.*

All Donors Score Summary -Last 5 yrs thru LFY How to use the All Donors Score Summary -Last 5 yrs thru LFY analysis This analysis enables you to quickly assess how your donor base has engaged with your organization over the past five fiscal years, including the most recent completed fiscal year (LFY). Drawing from your gifts and thresholds tables, it examines each donor's giving activity for each of the last five years, classifying donors into segments based on their annual giving patterns. The analysis produces a Score for each donor, reflecting their giving behavior year over year, identifying new donors, repeat donors, lapsed donors, and those whose giving has increased, decreased, or remained steady. These scores are then summarized into broader Indicator categories, such as Positive, Neutral, Possible Concern, and Long-Term Lapse, allowing you to visualize the overall health of your donor community. You can use this to pinpoint which groups require urgent attention, such as those showing signs of lapsing (e.g., Long Term Lapse or Possible Concern), and which groups are trending positively and likely to respond well to stewardship or upgrade asks. The scoring logic incorporates not only whether donors gave, but also whether their giving is improving, stable, or declining compared to previous years. This nuanced view supports more sophisticated Constituent Intelligence, enabling you to tailor your strategies for re-engagement, retention, or recognition. Fundraising directors, development officers, and donor relations staff should review the analysis, ideally as part of regular Constituent Intelligence routines, on a quarterly basis, or at key planning junctures. Use the summary counts to identify segments that are growing or shrinking in size. For example, focus on re-engaging donors flagged as Long Term Lapse,  or invest in stewardship for those identified as Positive.  If your version of the analysis includes individual donor details, leverage those columns to craft customized outreach based on each donor's recent giving trajectory. To measure success, track changes in the number of donors transitioning from 'Possible Concern' or 'Long Term Lapse' into 'Positive' or 'Neutral' categories over time. You can also monitor improvements in retention rates and average gift size among the identified segments. By regularly applying these insights, you position your team to make data-driven decisions that strengthen donor relationships and drive sustainable growth in fundraising.

# 1.7: Tenure & Lifetime Value (LTV) Analysis

## QX45 Top Giver Engagement Streaks Analysis

*This analysis is the ultimate "scorecard" for your top donors, providing a complete, 360-degree view of their giving behavior, loyalty, and engagement.*

Top Giver Engagement Streaks How to use the Top Giver Engagement Streaks analysis This analysis identifies your most valuable donors-those whose annual giving meets or exceeds a defined top-donor threshold in the most recent complete fiscal year-and reveals detailed engagement patterns over time. Drawing from your gift and constituent records, it compiles each donor's giving by fiscal year, calculates consecutive-year giving streaks, and incorporates historical gift frequency, recency, and trends. You'll see at a glance not just who your top givers are, but also how consistently and engaged they have been over consecutive years, when they most often give (by calendar quarter), and whether their support has remained stable, increased, or decreased. The analysis goes beyond basic totals by showing the length of each donor's current giving streak (consecutive years ending with the last full fiscal year), their longest-ever streak, and whether they have continued their support into the current year. It also provides a Giving Trend Score and Giving Frequency Score to help you quickly spot positive or negative changes in gift amounts and the number of gifts year-over-year. The donor's tenure in your top segment is flagged, classifying them as new, developing, or established, which is crucial for tailoring stewardship. Additional columns, such as average gifts per year, average gift size, and peak giving quarter, are included to help you personalize your approach and time your outreach for maximum impact. There is also a column indicating whether a donor is deceased to assist with your planning. You can use this analysis to prioritize stewardship for long-term, consistent givers and identify at-risk donors whose streaks may be ending or whose giving is declining. Development officers should use these insights to craft tailored renewal strategies, recognizing milestone streaks, re-engaging lapsed top donors, or accelerating engagement with newly upgraded supporters. Fundraising directors should review it routinely to monitor the health of their top donor pipeline, spot early warning signs, and optimize resource allocation. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. To measure success, track retention rates among top givers, the percentage of donors who maintain or grow their streaks, and the effectiveness of targeted stewardship campaigns inspired by these insights. By acting on this set of analyses, you'll build stronger relationships, increase donor lifetime value, and ensure a more resilient fundraising program.

## 2.1: Outright Lapse Mitigation YOY

## QX18 Attrition Warning Summary View Analysis

*This analysis is a comprehensive risk-assessment model that segments your entire active donor file by their value and their likelihood to lapse.*

Attrition Warning Summary View How to use the Attrition Warning Summary View analysis This analysis provides a strategic, data-driven overview of donor attrition risk across your active donor base, drawing on each donor's giving history over the past four years and their most recent activity. By combining gift data from your Gifts and Constituent records, it identifies for each donor their total giving, recent giving in the last 24 months, trends compared to the previous period, and how long it has been since their last gift. Donors are automatically grouped into meaningful giving segments (Top, Middle, Bottom, or Lapsed) based on recent giving levels, and each is assigned a risk score reflecting recency, changes in giving patterns, and frequency of gifts. You'll see summarized results by donor segment and risk level, such as Critical Risk or High Risk, along with recommended actions for each group. These recommendations prioritize where to focus your outreach, ranging from URGENT - Personal Intervention, for high-risk top donors, to LOW - Standard Communication, for donors at lower risk. Supporting information, including average and median recent giving, average lifetime value, and average number of months since the last gift, enables you to assess the characteristics of each group quickly. These details help you tailor outreach with more personal touches-for example, referencing a donor's long-term commitment or recent changes in their giving behavior. Key calculations include the risk score (based on recency, giving trends, and gift frequency), current segment assignment, and giving trend (Growing, Stable, Declining, or New/Reactivated). These metrics matter because they highlight donors most at risk of lapsing and identify those whose support is changing, giving you early warning before relationships are lost. You should review this analysis as part of your regular Constituent Intelligence routines. Fundraising directors, major gift officers, and donor stewardship teams can utilize it to prioritize which donors to contact, determine the level of personalization required, and adjust their stewardship strategies. For example, you might assign your most experienced relationship managers to reach out personally to high-risk top donors, while automating re-engagement communications for medium-risk donors in the bottom segment. Regularly sharing these insights in team meetings ensures everyone is aligned on retention priorities. To evaluate success, track changes in donor retention rates, reductions in the number of high-risk donors over time, and improvements in reactivation of previously declining or lapsed supporters. By applying the actionable insights surfaced in this analysis, you ll strengthen your donor relationships and focus resources where they have the greatest impact.

## QX20 Attrition Warning Detail Analysis

*This reporti dentifies donors at risk of lapsing or reducing their giving though risk scoring. Segments donors by current giving level and risk category.*

Attrition Warning Detail How to use the Attrition Warning Detail analysis This analysis enables you to proactively identify donors who are at risk of lapsing, segment them based on their recent giving history, and prioritize personalized outreach. Drawing from your Gifts and Constituents data, it compiles key statistics for each active donor, including their total lifetime giving, giving in the most recent and previous 36-month periods, the number of gifts, and the months since their last gift. By comparing recent and historical giving, the analysis detects trends such as Growing, Stable, Declining, or New/Reactivated. A central feature is the risk scoring system, which weighs recency of giving, changes in giving frequency, and shifts in total giving. This composite risk score is used to classify donors into Critical, High, Medium, or Low Risk categories. Recommended actions are tailored accordingly, ranging from urgent personal intervention for top donors at high risk to standard communications for those at low risk. These actionable categories are designed to help you allocate limited stewardship resources where they will have the greatest impact on retention and revenue. Alongside these classifications, the analysis provides supporting information, such as the average and median recent giving, the average number of months since the last gift, and the average lifetime value for each segment and risk level combination. You can use this supporting data to personalize your outreach, such as referencing past giving milestones or recognizing long-term loyalty, which can deepen engagement and increase the effectiveness of your appeals. You should review this analysis as part of your team's Constituent Intelligence routines, especially at quarterly planning meetings or before major campaigns. Fundraising directors, donor relations managers, and development officers can utilize these insights to prioritize donor portfolios, design targeted stewardship plans, and effectively monitor the impact of their interventions. Regularly acting on this analysis can help reduce donor attrition, increase renewal rates, and boost overall fundraising performance. To measure success, track changes in donor retention rates, the reduction of high-risk classifications over time, and improvements in recent giving among previously at-risk segments. You should also monitor the outcomes of specific outreach actions tied to the recommended engagement strategies, adjusting your approach as you see positive shifts in donor behavior.

## QX31 Active Top Donor 2-Year Frequency Trend Score Detail Last Fiscal Year Analysis

*This analysis analyzes the giving frequency of your top donors, revealing trends in their engagement that go beyond the total dollar amount they give.*

Active Top Donor 2-Year Frequency Trend Score Detail LFY How to use the Active Top Donor 2-Year Frequency Trend Score Detail LFY analysis This analysis identifies your organization's most active top donors based on their gift frequency and trends over the past three fiscal years, focusing on those who meet or exceed the current threshold for top-level giving. Examining detailed giving activity, such as the number of gifts made in each of the last three full fiscal years and the total amount contributed in the most recent full fiscal year, provides a nuanced view of which high-value donors are increasing, maintaining, or reducing their engagement. The analysis draws from your Gifts, Constituents, and Thresholds tables, combining giving data with donor profile information and custom thresholds to ensure relevance to your organization's unique donor landscape. You'll see that, for each qualifying donor, not just their giving history, but also their "Donor Classification" (New Top Donor, Developing, or Established) is based on the length of their giving relationship. The "Giving Frequency Score" is a two-part indicator that summarizes year-over-year changes: the first letter compares the most recent fiscal year to the prior year, while the second letter compares the prior two years, with codes for increased (I), even (E), decreased (D), new (N), or reactivated (R) giving. This helps you quickly spot emerging patterns-such as donors who are ramping up their engagement, remaining steady, or declining so you can prioritize outreach and stewardship accordingly. The inclusion of donor names, organizational affiliation, and classification supports a more personalized approach, allowing gift officers to tailor their contact with relevant background and context. For example, a donor newly classified as "Developing" who is showing increased gift frequency may be primed for deeper cultivation or recognition. You should review this analysis at least quarterly as part of your Constituent Intelligence routines, ensuring timely action on shifts in donor behavior. Fundraising directors, major gift officers, and stewardship leads should utilize these insights to segment portfolios, design targeted engagement strategies, and initiate personalized outreach for donors exhibiting changes in trend or frequency. Consider flagging those with declining frequency for re-engagement campaigns and those with increasing patterns for potential upgrade conversations. Success with this analysis can be measured by improvements in donor retention among top givers, increases in year-over-year giving from this cohort, and the number of personalized touchpoints attributed to insight-driven outreach. By consistently leveraging these insights, you'll be better equipped to strengthen relationships, maximize giving potential, and proactively address attrition risks within your most valuable donor segment.

## QX32 Active Top Donor Combined Frequency and Amount Score Detail Analysis

*This comprehensive analysis (often used as a report) provides a complete, 360-degree profile of your top donors.*

Active Top Donor Combined Frequency and Amt Score Detail How to use the Active Top Donor Combined Frequency and Amt Score Detail -Cast Error analysis This analysis provides you with a detailed, data-driven understanding of your organization's most active top donors, segmenting and scoring their giving behaviors over the past several fiscal years. Leveraging your Gifts, Constituents, and Thresholds data, it identifies those donors who meet your organization's top donor criteria in the most recent full fiscal year and then calculates nuanced metrics that reveal both the consistency and the trajectory of their giving. You'll see not only how much and how often these donors have contributed, but also how their engagement is changing, distinguishing between increasing, steady, or declining support. You can use this to track each top donor's giving trend and frequency scores, assess their current and longest consecutive giving streaks, and understand their overall tenure and history with your organization. Key metrics, such as the Giving Trend Score and Giving Frequency Score, help you quickly identify positive momentum or potential risks of lapse. Meanwhile, lifetime metrics, including Total FYs with Gifts and donor classification (New Top Donor, Developing, Established), provide critical context for effective stewardship. Supporting columns, such as donor names (whether individual or organizational), first gift dates, and detailed annual giving breakdowns, are included to enable you to personalize outreach, reference recent gifts, and acknowledge donor milestones in your communications. The strategic value lies in making your fundraising more targeted and effective. With these insights, you can prioritize outreach to donors showing declining trends or lapsing frequency, identify opportunities for upgrade among those with increasing scores, and celebrate or renew support from those with long consecutive streaks. This also allows you to tailor engagement based on a donor s history-such as welcoming new major donors differently from those who are long-established supporters. You should have frontline fundraisers, major gift officers, and stewardship teams review this analysis regularly, mainly as part of your Constituent Intelligence routines, so that each donor receives outreach that matches their behavior and history. Consider using it to inform call lists, personalize stewardship touchpoints, or design segmented upgrade campaigns. Success can be measured by tracking retention rates among top donors, increases in average gift size or frequency, and the number of personalized interactions resulting in renewed or increased support. By weaving these insights into your daily workflow, you'll build stronger, more data-informed relationships and maximize fundraising outcomes.

## QX82 Middle Level Donor 5 year Giving Amount Score Detail Analysis

*This analysis (often used as a report) uses a performance score to codify each donor's giving pattern by annual giving amounts over the last five years.*

Middle Level Donor 5 yr Giving Amt Score Detail How to use the Middle Level Donor 5-year Giving Amt Score Detail analysis This analysis enables you to assess the five-year giving patterns of your middle-level donors in a clear and actionable way. It draws on your organization's gift transaction and constituent data, focusing on donors whose annual giving places them within your defined middle segment. For each donor, the analysis summarizes their annual giving amounts over the last five fiscal years. Then it assigns a four-character Performance Score that captures their year-over-year giving behavior, such as increased, lapsed, reactivated, or steady giving. This score is paired with a Recent Trend label to quickly identify donors exhibiting positive momentum, neutral behavior, or potentially concerning giving behavior. The analysis uses fiscal year logic to ensure that giving is attributed to the correct period. It also cross-references thresholds you set for the middle donor segment, so you always have an up-to-date view of who qualifies. The Performance Score distills complex giving trajectories into a concise, at-a-glance signal for each donor, helping you identify those who are increasing, lapsed, or newly reactivated. Supporting columns—such as total giving by year, donor name, and whether the record is for an individual or an organization—provide valuable context for personalizing your outreach and stewardship strategies. You can use this analysis to prioritize donors at risk of lapsing, identify candidates for upgrade requests, and determine who to celebrate for renewed or increased commitments. It automatically excludes donors marked as deceased in your database.  Direct fundraisers and development managers should review this analysis regularly as part of their Constituent Intelligence routines. In practice, major gift officers can use the Recent Trend to triage portfolios, while annual fund teams can spot reactivated or increasing donors for targeted stewardship. Leadership should look for patterns in aggregate in the summary version of this analysis to inform overall segmentation and resource allocation. To assess your success, track key metrics such as retention rates, upgrade rates from middle to major giving, and response to personalized outreach, all informed by the analysis. You should see improved donor engagement, more effective stewardship efforts, and a clearer understanding of your middle donor pipeline health as you integrate these insights into your Constituent Intelligence processes.

## QX152 Middle Donors whose gift size is Decreasing.

*This analytic identifies donors who were in the 'Middle' giving segment during the last full fiscal year and whose average gift size decreased compared to the year before.*

This analysis identifies middle-segment donors whose average gift size has decreased from the previous fiscal year to the last full fiscal year. By examining data from the Gifts and Constituents tables, it segments donors based on their contributions and provides insights into their giving patterns. This information is crucial for understanding donor behavior and crafting targeted engagement strategies. The analysis uses several key metrics. It calculates total giving for the last fiscal year and the average gift sizes for the last three fiscal years. The core insights come from comparing the average gift size in the last fiscal year with that in the previous year. Identifying donors whose average gift has decreased allows you to focus on those who may need additional engagement or motivation to enhance their giving. Strategically, this analysis enables you to identify potential challenges with your middle-tier donors. A decrease in giving could signal disengagement or financial constraints. By recognizing these patterns early, you can implement proactive measures to re-engage these donors. This might include tailored communication, personalized outreach, or exclusive donor appreciation events to rekindle their interest and investment in your cause. You should consider running this analysis at the end of each fiscal year or during donor reviews, ideally in conjunction with your annual fundraising strategy meetings. It would be beneficial for development officers and fundraising directors to review the findings to determine which middle-tier donors might require special attention. Applying the insights from this analysis can inform your outreach strategies and enable you to allocate resources more effectively. To measure the success of utilizing this analysis, you can track the re-engagement rates of identified donors over the following year. Additionally, monitor changes in their giving patterns, including any increases in average gift size or total contributions after targeted outreach. Another success measure could be the retention rates of middle-tier donors, assessing how many of these donors remain active and engaged compared to previous years. By keeping an eye on these metrics, you can evaluate the effectiveness of your strategies and continuously refine your approach to donor relations.

## QX154 Top Donors whose gift size is Decreasing.

*This analytic identifies donors who were in the 'Top' giving segment during the last full fiscal year and whose average gift size decreased compared to the year before.*

This analysis identifies donors designated as 'Top' givers during the last full fiscal year whose average gift size has decreased compared to the prior year. By examining data from your donor database, particularly focusing on gifts made over the last three fiscal years, this analysis helps you pinpoint donors who may need renewed engagement to maintain their support. The analysis calculates several key metrics, including total giving for the last fiscal year, average gift sizes for the last three fiscal years, and a trend score that indicates the direction of their giving behavior. Specifically, it looks at whether the average gift size has declined, remained stable, or increased over time. This information is critical because it highlights donors who may be at risk of disengagement, allowing you to target your outreach and retention efforts effectively. The strategic value of this analysis lies in its ability to inform your fundraising strategies and donor management practices. By identifying top donors with decreasing average gifts, you can initiate personalized engagement strategies to address potential concerns that may have led to reduced giving. Understanding the dynamics of donor behavior enables you to tailor your communications, ensuring that you actively foster relationships with these key supporters. You should consider running this analysis at the end of each fiscal year, immediately following your financial reviews. It is particularly relevant for fundraising directors and development officers who are responsible for donor stewardship and retention. After reviewing the results, you can develop targeted outreach campaigns, such as personalized thank-you messages, invitations to exclusive donor events, or tailored updates on the impact of their contributions. To measure the success of actions taken based on this analysis, track the following metrics: the response rate to outreach efforts, the retention rate of identified donors in subsequent years, and any increases in average gift sizes among previously declining donors. Additionally, you can assess changes in donor engagement levels by monitoring attendance at events or participation in surveys. By utilizing these insights and adjusting your strategies accordingly, you can enhance your overall donor retention efforts and strengthen long-term relationships with your most valuable supporters.

## QX156 Bottom Donors whose gift size is decreasing.

*This analytic identifies donors who were in the 'Bottom" giving segment during the last full fiscal year and whose average gift size decreased compared to the year before.*

This analysis focuses on identifying donors who belong to the "Bottom" giving segment and whose average gift size has decreased over the past year compared to the year before. By examining historical gift data, it determines which individuals are experiencing a decline in their giving patterns, providing critical insights for your fundraising strategies. The analysis utilizes data from your Gifts and Constituents tables, alongside a set of established thresholds, to filter and categorize donors effectively. Key calculations include the total giving amounts and average gift sizes over the last three fiscal years. Specifically, it computes the average gift for the last full fiscal year and the two previous years, allowing you to spot trends in donor behavior. The analysis also assigns a trend score to each donor, which reflects their giving history and recent changes in their contributions. This scoring system is valuable because it helps you differentiate between donors whose giving is steadily declining and those who may need more engagement or a different approach. The strategic value of this analysis lies in its ability to highlight potential issues with donor retention and engagement. By identifying donors whose contributions are decreasing, you can proactively reach out to them with tailored communications or targeted appeals. Understanding these trends allows you to develop specific strategies to re-engage these individuals, possibly through personalized messaging that acknowledges their past contributions and encourages renewed support. You should consider running this analysis at the beginning of each fiscal year, especially after your annual fundraising campaigns, to assess donor retention and identify those who may need additional attention. Development officers and fundraising directors should review the findings, as they can inform donor outreach strategies and help prioritize engagement efforts. Insights gained can be applied by creating targeted re-engagement campaigns or offering special recognition to loyal donors, which may encourage them to increase their giving. To evaluate the success of implementing this analysis, you can measure the increase in donations from identified donors over the subsequent fiscal year. Tracking donor responses to personalized outreach and monitoring retention rates among those who received special engagement efforts will also provide valuable insights into the effectiveness of your strategies. Ultimately, by leveraging this analysis effectively, you can enhance donor relationships and foster a more sustainable fundraising program.

## QX157 All Active Donors whose giving is declining

*This analytic identifies active donors from last year whose annual giving either decreased or lapsed completely during at least 2 of the past 3 years.*

This analysis identifies active donors from the previous year whose giving has declined, specifically those who have either reduced their contributions or lapsed completely in at least two of the last three years. It utilizes data on donor gifts over five years, extracting relevant information from the Gifts and Constituents tables to assess donor behavior and performance. The analysis focuses on donors categorized as 'Middle' segment last year and examines their giving trends to provide insights into potential attrition risks. Key calculations within the analysis include the total giving for the last five years, the first year each donor contributed, and a performance score that reflects their giving trend over this period. This performance score is derived from a systematic assessment of changes in their giving amounts, allowing you to categorize donors into statuses such as 'Decreased', 'Lapsed', 'Inactive', or 'New'. These metrics are significant as they reveal not only the current state of donor engagement but also highlight those at risk of disengagement, enabling you to prioritize retention efforts. The strategic value of this analysis lies in its ability to inform your fundraising strategies. By pinpointing donors whose contributions are declining, you can take proactive measures to re-engage them, tailoring communication and outreach efforts to address their specific concerns or barriers to giving. This targeted approach can enhance donor relationships, increase retention rates, and ultimately improve fundraising outcomes. You should consider running this analysis at key points in your fundraising calendar, such as after year-end or during strategic planning sessions. Development officers and fundraising directors should review the results to identify donors who warrant immediate attention and personalized engagement strategies. Applying these insights may involve scheduling follow-up meetings, crafting tailored communication campaigns, or implementing donor appreciation initiatives specifically designed for those identified as at risk. To evaluate the impact of this analysis, you can measure success by tracking donor retention rates and how many of the identified at-risk donors re-engage and increase their giving in the subsequent fiscal year. Additionally, monitoring the overall performance of the 'Middle' segment after targeted interventions will provide insight into the effectiveness of your retention strategies and the long-term viability of your donor base.

## QX29 Active Top Donors 2-Year Giving Amount Score Summary thru Last Fiscal Year Analysis

*This analysis (often used as a report) summarizes the behavioral trends of your top donors by analyzing their year-over-year changes in average gift size.*

Active Top Donors 2-Year Giving Amt Score Summary thru LFY How to use the Active Top Donors 2-Year Giving Amt Score Summary thru LFY analysis This analysis enables you to identify and understand the giving patterns of your top donors over the past two fiscal years, using a data-driven approach rooted in Constituent Intelligence. It examines all donors who meet or exceed your organization's top donor threshold, aggregating their gifts over the most recent fiscal year and comparing their giving averages across the last two years. By doing so, you gain a clear view of each donor's trajectory-whether they are increasing, maintaining, or decreasing their support. The core metric is the Trend Score, a concise code that reflects each donor's giving pattern over the last two years. For example, a score of "I" indicates an increased average gift, "E" means the pattern is even, "D" signals a decline, and "N" designates a new donor. The analysis summarizes the number of donors in each trend category. It flags the overall indicator as Positive, Neutral, or Possible Concern, allowing you to prioritize which relationships need attention quickly. You can use this analysis to segment your top donors for tailored stewardship and outreach. For example, those scored as Positive present an opportunity for deeper engagement, while those flagged as Possible Concern should prompt retention strategies or personal check-ins. If you have access to more detailed donor data, such as contact preferences or giving designations, alongside the trend scores, you can further personalize your approach and craft messages that resonate with each donor's interests and history. Development directors and frontline fundraisers should review this analysis periodically as part of their Constituent Intelligence routines. It is especially useful before major campaigns, annual appeals, or stewardship planning sessions. Use the insights to inform targeted meeting lists, develop retention strategies for at-risk donors, and celebrate or recognize those whose giving is increasing. Over time, measure success by tracking improvements in retention rates among top donors, growth in average gift size, and the number of donors moving from Possible Concern to Positive indicators. This will help ensure that your engagement efforts are both strategic and effective, ultimately strengthening your donor relationships and advancing your fundraising goals.

## QX30 Active Top Donors 5-Year Giving Amount Score Summary thru Last Fiscal Year Analysis

*This analysis (often used as a report) provides a highly detailed breakdown of the multi-year giving patterns of your top donors.*

Active Top Donors 5-Year Giving Amt Score Summary thru LFY How to use the Active Top Donors 5-Year Giving Amt Score Summary thru LFY analysis This analysis identifies and summarizes giving trends among your currently active top donors over the last five fiscal years. It leverages your organization's gift transaction history, comparing annual giving totals for each donor, and applies client-specific thresholds to classify top donors. For each constituent, the analysis calculates a four-year string of codes representing their giving pattern each year, such as increases, declines, new gifts, or lapses, based on year-over-year changes in their total giving. These Giving Trend Scores are then grouped to show the number of donors who fall into each pattern. You can use this to quickly spot how many donors are increasing their support, remaining steady, declining, or lapsing, all in the context of the most recent five fiscal years. The analysis is grounded in Constituent Intelligence principles, providing actionable segmentation for donor stewardship and prospect management. By focusing on top givers and their most recent behavior, you gain a concise view of donor health that guides both retention and upgrade strategies. The key metric here is the Giving Trend Score—a four-character code for each donor that summarizes their trajectory (e.g., I+D-ER might indicate initial growth, followed by a slight decline, equal giving, and reactivation). Understanding these trends is crucial: it allows you to prioritize which top donors may need cultivation to prevent attrition, which are ripe for a major gift ask, and which have re-engaged and might welcome deeper involvement. If your version of the analysis includes supporting columns-such as donor contact information, lifetime giving, or last engagement date-you should use these to craft highly personalized outreach and stewardship. You should schedule this analysis for periodic review as part of your Constituent Intelligence routines, ensuring you always have a current view of your top donor trends. Fundraising directors and frontline development officers should review the analysis at least quarterly, using it to target stewardship for donors showing declining or lapsed patterns, and to identify candidates for upgrade or special recognition among those with increasing trends. Integrate these insights into your portfolio review and move management meetings to drive timely, data-driven action. To measure the impact, track subsequent donor retention rates, average gift growth among targeted segments, and the success rate of personalized outreach informed by these scores. The ultimate goal is to see improved engagement and revenue among your top donors as a direct result of a more tailored, intelligence-driven strategy.

## QX33 Active Middle Donor 5-Year Amount Score Summary thru Last Fiscal Year Analysis

*Evaluates middle-tier donors using a predictive scoring system based on 5-year giving patterns, categorizing donors by coded scores.*

Active Middle Donor 5-Year Amt Score Summary thru LFY How to use the Active Middle Donor 5-Year Amt Score Summary through LFY (Last Fiscal Year) analysis This analysis provides a clear, data-driven summary of your active middle-tier donors, examining the last five fiscal years to reveal giving trends and engagement signals. Drawing from your organization's gift data, it focuses specifically on donors whose last fiscal year giving falls within your defined middle donor thresholds, as determined by your organization's annual total giving segmentation breakpoints. For each qualifying donor, the analysis evaluates annual giving amounts across each of the last five fiscal years, then assigns a concise Score that codes their giving pattern year-over-year-such as increases, decreases, lapses, or new engagement-and summarizes the donor s most recent engagement status as Positive, Neutral, or Possible Concern. You gain the ability to see at a glance which of your middle donors are increasing their gifts, maintaining steady support, or showing signs of declining engagement or lapsing. The scoring logic captures nuanced patterns: for example, a donor who gave more last year than the year before is coded as 'I' (Increase), while a donor who dropped off is flagged as 'L' (Lapsed). Other flags include 'N': New, 'R': Recaptured, 'L': Lapsed, 'E': Gave Equal Amount YOY, 'D': Annual Giving Amount Declined. The analysis aggregates these scores, allowing you to quickly quantify the number of donors in each category, which helps you prioritize outreach and stewardship actions. By incorporating this analysis into your Constituent Intelligence routines-ideally on a quarterly or biannual schedule-you ensure timely and relevant engagement with your core donor segment. Fundraising directors and frontline development officers should review this analysis together to identify at-risk donors who need re-engagement, as well as those whose increased giving signals potential for upgrade. Consider customizing stewardship touchpoints or personalized appeals for those with Positive or Neutral indicators, while developing targeted win-back strategies for those flagged as Possible Concern. If the analysis includes donor names and recent giving history alongside scores, use these details to tailor your outreach, referencing specific giving patterns or milestones in your communications. Success can be measured by monitoring changes in donor retention rates, growth in total giving from the middle donor segment, and the effectiveness of targeted interventions, such as reactivating lapsed donors or upgrading donors flagged as increasing in value. Applying insights from this analysis helps you proactively manage donor relationships, focus your efforts for maximum impact, and drive sustainable fundraising results.

## QX151 Middle Donors whose gift size is Increasing

*This analytic identifies donors who were in the 'Middle' giving segment during the last full fiscal year and whose average gift size increased compared to the year before.*

This analysis identifies donors classified in the 'Middle' giving segment during the most recent full fiscal year and assesses whether their average gift size has increased compared to the previous year. The data utilized in this analysis includes donor giving history, segmented thresholds, and fiscal year parameters. By focusing on donors whose giving habits show growth, you can pinpoint individuals who may be more receptive to further engagement and increased giving. Key calculations within the analysis include the total and average gift amounts for the last three fiscal years. By comparing the average gift size from the last full fiscal year with that from the previous year, you can identify trends in giving behavior. The analysis also assigns a trend score to each donor based on their giving history, which indicates whether their giving is increasing, stable, or declining. Understanding these metrics is vital because they help you assess the potential for cultivating stronger relationships with donors who are showing positive trends in their giving. The strategic value of this analysis lies in its ability to inform your fundraising strategies. By focusing on donors with increasing gift sizes, you can tailor your outreach efforts to those who are already demonstrating a commitment to your cause. This targeted approach not only enhances the likelihood of securing larger gifts but also fosters deeper connections with your donor base. You should consider running this analysis at the close of each fiscal year or quarterly to track changes in donor behavior over time. Development officers and fundraising directors should review the results to identify high-potential donors for personalized engagement strategies. Based on the insights gained, you can implement targeted communication plans, such as sending tailored appeals or invitations to exclusive donor events for those showing increased giving. To measure the success of implementing this analysis, focus on metrics such as the increase in overall donations from identified middle donors, the percentage of donors who upgrade their giving in the subsequent year, and the level of engagement with personalized outreach efforts. Tracking these indicators will help you evaluate the effectiveness of your strategies and refine your approach to maximize donor relationships and contributions.

## QX153 Top Donors whose gift size is Increasing

*This analytic identifies donors who were in the 'Top' giving segment during the last full fiscal year and whose average gift size increased compared to the year before.*

This analysis identifies donors classified in the 'Top' giving segment during the last full fiscal year, focusing specifically on those whose average gift size has seen an increase compared to the previous year. By analyzing data from your Gifts and Constituents tables, this analysis provides insights into donor behavior that can inform your strategic fundraising efforts. The analysis processes several key metrics. It starts by determining the thresholds for the top giving segment, which is essential for identifying the most significant contributors. It then calculates total and average gift amounts for the last three fiscal years, allowing you to track changes over time. The important comparisons here involve the average gift amounts for the most recent fiscal year and the prior two fiscal years. The analysis also assesses the first year of giving for each donor, establishing a baseline for evaluating their giving patterns. The strategic value of this analysis lies in its ability to pinpoint donors whose giving is not only consistent but also growing. Understanding which top donors are increasing their support can help you tailor engagement strategies, ensuring that your outreach is focused on those who are most likely to deepen their commitment. Moreover, the trend score generated in the analysis offers a quick reference to assess each donor's giving pattern over time, which can guide personalized communication and cultivation strategies. You should consider running this analysis at the end of each fiscal year or quarterly to keep a pulse on donor trends. It is particularly useful for development officers and fundraising directors who are responsible for donor engagement strategies. When reviewing the results, focus on the donors with an 'I' score, indicating an increase in average gift size, as these individuals may be receptive to further engagement or major gift solicitations. To apply the insights effectively, look for opportunities to recognize and thank these donors, potentially involving them in special events or providing exclusive updates on the impact of their contributions. Consider pairing this analysis with donor feedback surveys to enhance relationships with these top contributors. Success measures for evaluating the impact of using this analysis could include tracking the retention rate of these top donors over time, monitoring changes in average gift sizes, and assessing the overall increase in total donations from the identified group. Additionally, establishing benchmarks for donor engagement activities stemming from this analysis can help quantify its effectiveness in nurturing donor relationships and driving fundraising outcomes.

## QX155 Bottom Donors whose gift size is increasing.

*This analytic identifies donors who were in the 'Bottom' giving segment during the last full fiscal year and whose average gift size increased compared to the year before.*

This analysis identifies donors in the 'Bottom' giving segment during the last full fiscal year who increased their average gift size from the previous year. It pulls data from your donor database, focusing on gift amounts, donor segments, and fiscal-year timing to identify donors who are demonstrating positive giving trends despite lower overall contribution levels. The analysis begins by establishing thresholds for the bottom segment and identifying the last full fiscal year. It then calculates the first year of giving for each donor to understand their giving history. For the last three fiscal years, it aggregates total and average gift amounts, allowing you to compare trends over time. Key metrics include total giving in the last fiscal year and average gift sizes for the last three fiscal years. The analysis particularly highlights donors whose average gift size increased from the previous year, indicating potential opportunities for deeper engagement. Understanding these metrics is crucial because they reveal which bottom-tier donors may be becoming more committed or interested in your organization. By identifying those whose giving has increased, you can target your engagement efforts effectively. This strategic focus allows you to nurture these relationships, potentially upgrading them to higher giving segments in the future. To maximize the utility of this analysis, consider running it at the beginning of each fiscal year, shortly after you have finalized the previous year's giving data. This timing allows you to identify and engage with promising donors while their giving behavior is still fresh. Fundraising directors and development officers should review the results to prioritize outreach to these identified donors, tailoring communication and engagement strategies to foster their growing interest. For actionable recommendations, personalize follow-ups with these donors by acknowledging their increased support and sharing the specific impact of their contributions. Consider inviting them to exclusive events or providing behind-the-scenes insights into your organization's work. Additionally, assess the effectiveness of your strategies by tracking the conversion rate of these donors to higher giving levels over the subsequent year. To measure success, monitor metrics such as the percentage increase in total contributions from these identified donors, the number of donors who upgrade their giving levels, and engagement metrics such as event attendance or participation in donor surveys. By evaluating these outcomes, you can refine your donor engagement approach and further enhance your fundraising strategies.

## QX158 Bottom Segment Stable-Target Increase

*This analytic proactively identifies upgrade candidates from your Bottom-segment donor pool. This particular list is of donors who have recently given at a consistent level year over year.*

This analysis, named "Bottom Segment Stable-Target Increase," is designed to identify potential upgrade candidates from your bottom-segment donor pool. It focuses on donors who have consistently given at a comparable level over the past two years, specifically filtering for those whose giving patterns have either remained stable or shown a slight increase. The data utilized includes donor gift history from the past five fiscal years, segmented thresholds for donor levels, and individual donor information. The analysis calculates a performance score for each donor based on their giving trends over the last four fiscal years. This score is derived from comparing their most recent giving amounts to those from previous years. The scoring system categorizes donors into different performance brackets, allowing you to quickly identify those who are eligible for targeted engagement. For instance, a donor who has maintained or increased their giving is marked with an 'EI' (Equal then Increased) or 'EE' (Equal then Equal), highlighting their potential for further engagement and investment. Strategically, this analysis provides valuable insights into your donor base by pinpointing individuals who are already inclined to give but have not yet reached higher giving tiers. By identifying these donors, you can tailor your outreach efforts to encourage them to increase their contributions, thereby maximizing your fundraising potential. You can use this information to enhance donor relationships through personalized communication, appreciation strategies, and targeted appeals that resonate with their giving history. To effectively leverage this analysis, consider running it at the beginning of your fiscal year or right after major fundraising campaigns to refresh your understanding of donor dynamics. Fundraising directors and development officers should review the findings, as they will provide a clearer picture of which donors may respond positively to an upgrade ask. When applying the insights, focus on crafting personalized outreach strategies that acknowledge their past support while inviting them to consider increasing their contributions. To measure the success of utilizing this analysis, track the number of donors who upgrade their giving levels after targeted outreach and the total increase in donations attributed to these efforts. Additionally, assess engagement rates and feedback from these donors to refine your approach over time, ensuring that your strategies are effectively resonating with your audience. By continually evaluating the impact of this analysis, you can enhance your fundraising strategies and foster stronger relationships with your donors.

## QX159 Top Segment Stable-Target Increase

*This analytic proactively identifies upgrade candidates from your Top-segment donor pool. This particular list is of donors who have recently given at a consistent level year over year.*

This analysis identifies potential upgrade candidates within your top-segment donor pool by examining donors who have consistently given at a stable level over the past two years. It utilizes historical giving data from the last five fiscal years to assess each donor's contribution patterns, focusing on those who demonstrated either an equal contribution or an increase in giving. The analysis pulls data from your Gifts and Constituents databases, integrating thresholds that define your donor segments. At its core, the analysis calculates a four-character performance score for each donor based on their giving history. This score reflects not only their current contributions but also their giving trends over the past few years. For instance, donors whose scores indicate they have either maintained or increased their giving-designated by 'EI' (Equal then Increased) or 'EE' (Equal then Equal)-are flagged as prime candidates for upgrades. This metric is essential because it highlights donors who have shown loyalty and potential for increased giving, therefore allowing you to target your fundraising efforts more effectively. Strategically, you can leverage this analysis to enhance donor relationships and ensure that your fundraising initiatives are data-driven. By recognizing donors who have a history of stable giving, you can tailor your communication and engagement strategies to encourage increased donations. This targeted approach not only fosters a deeper connection with your top donors but also maximizes your fundraising potential, as you are focusing on individuals who have already demonstrated a commitment to your mission. To optimize the use of this analysis, consider running it at the start of each fiscal year when you can engage your top donors with personalized outreach. Development officers and fundraising directors should review the results to identify key donors for upgrade conversations or special recognition. Applying these insights could involve crafting tailored messaging that acknowledges their past contributions while proposing specific engagement opportunities or increased giving levels. Success measures for evaluating the impact of this analysis might include tracking the percentage of identified donors who respond positively to upgrade solicitations, monitoring the overall increase in donations from this segment over time, and assessing donor retention rates for those who received personalized outreach based on this analysis. By continuously refining your engagement strategies based on these insights, you can foster stronger relationships with your donors and enhance your overall fundraising effectiveness.

# 3.1: Health Checks

## QX34 Active Middle Donors 2-Year Score thru Last Fiscal Year Analysis

*This analysis (often used as a report) analyzes the behavioral trends of your mid-level donors by tracking historical changes in their average gift size.*

Active Middle Donors 2-Year Score thru LFY How to use the Active Middle Donors 2-Year Score thru LFY analysis This analysis helps you identify active middle-tier donors based on their giving patterns over the last three fiscal years, using constituent and gift data to surface actionable insights. By focusing on donors whose giving falls within your organization's defined middle range (customized via the ClientThresholds table), you can quickly see which supporters are maintaining or increasing their commitment, as well as those who may be at risk of lapsing. The analysis draws on key fields, including each donor's total giving in the last full fiscal year, their average gift size for each of the past three fiscal years, and their giving trend score. This two-digit code summarizes changes in giving year-over-year (for example, IR for Increased then Recovered, or NL for New then Lapsed). Supporting details, such as whether a donor is an individual or an organization, and their constituent status, are included to help you tailor outreach and stewardship strategies for each contact. You should use these columns to personalize follow-ups, such as referencing their organizational role or past engagement, making your communications more relevant and effective. The metrics calculated here are important because they enable you to track not only how much donors are giving, but also how their behavior is changing. The Trend Score provides a quick visual cue to identify donors who are new, increasing, stable, declining, or lapsing, allowing you to determine where to prioritize cultivation, retention efforts, or re-engagement campaigns. Strategically, this analysis empowers you to segment your middle donors with precision, targeting increases for those trending upward, and deploying retention tactics for those showing signs of decline. Fundraising directors and frontline development officers should review this analysis together, ideally on a monthly or quarterly basis, to adapt engagement plans in real-time. You should reach out proactively to donors marked as new or increasing, and flag those with declining or lapsed trends for special attention-whether through personalized calls, stewardship events, or tailored appeals. Success can be measured by tracking changes in retention rates, upgrades within the middle donor segment, and the reactivation of donors flagged as at risk. This analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines to ensure your team stays ahead of donor attrition and maximizes growth opportunities within your active middle donor base.

## QX36 All Donors 5-Year Score Detail thru Current Fiscal Year Analysis

*This analysis is a comprehensive, detailed donor file that provides a multi-year giving history and a behavioral trend score across all donors*

All Donors 5-Year Score Detail thru CFY How to use the All Donors 5-Year Score Detail thru CFY analysis This analysis provides you with a detailed, year-over-year profile of every donor's giving behavior across the current and four previous fiscal years. It summarizes each donor's giving totals by year, as well as their total giving over five years and their lifetime. Central to this analysis is a four-character Score assigned to each constituent, which encodes their giving trend for each of the past four years (including the current year). Each character in the score reveals whether the donor is new (N), returned after lapsing (R), lapsed (L), increased their giving (I), maintained (E), or declined (D) compared to the prior year. This enables you to quickly identify patterns such as consistent upgrades, recent re-engagements, or at-risk lapsed donors. There is a summary version of this analysis, which provides a high-level overview of the number of donors with the same score, useful for high-level planning. This analysis, on the other hand, provides actionable information required to execute on that planning. In addition to the behavioral score, the analysis provides supporting columns, including current and historical giving amounts, lifetime total, and the first fiscal year in which the donor donated. These data points are not part of the score calculation but are essential for crafting tailored messaging, stewardship plans, and major gift strategies. For example, knowing a donor's cumulative contributions can help you acknowledge lifetime impact in your outreach. The key metrics—five-year giving totals, year-by-year giving changes, and the behavioral score—allow you to craft and target communication more effectively. You can identify donors with increasing trends for upgrade campaigns, spot recent lapses for targeted reactivation, and recognize steady supporters for ongoing stewardship. This analysis is particularly valuable for prioritizing your moves management and personalizing asks and acknowledgments. Development officers, advancement services, and fundraising team leads should regularly review this analysis—ideally, monthly or quarterly —as part of their Constituent Intelligence routines. Use it to flag donors for follow-up, plan personalized solicitations, and assess the effectiveness of your retention and upgrade strategies. Success should be measured by improvements in year-over-year retention, increases in average gift size, and higher rates of donor reactivation following targeted outreach inspired by this analysis. By applying these insights, you ensure that your engagement is both data-driven and deeply attuned to each donor's unique journey with your organization.

## 1.8: Foundational Model/Projections

### QX139 Multi-Year Revenue Projection Analysis

*This sophisticated analysis (often used as a report) acts as a predictive model for your fundraising program to predict future giving.*

Multi-Year Revenue Projection How to use the Multi-Year Revenue Projection analysis This analysis enables you to forecast donor counts and revenue for each of your key donor segments-Top, Middle, and Bottom-for the next three fiscal years. Drawing on historical gift data, the analysis first determines each donor's annual giving tier based on customizable thresholds, then tracks how donors move between these segments over time. By calculating actual transition rates (for example, the number of Middle-tier donors who become Top-tier donors or lapse) from recent years, it builds a data-driven projection of how your donor base is likely to evolve. It then applies the typical annual giving for each segment to estimate future revenue, providing a clear, actionable view of potential fundraising results. The data used comes directly from your Gifts table, segmenting donors by summed annual giving and aligning fiscal years to your organization's conventions. Rather than just reporting past performance, this analysis models donor retention, upgrade, downgrade, and attrition patterns, helping you understand not just how many donors are likely to stay, but also how the composition of your segments will shift. The Projected Donor Count and Projected Revenue columns are central, as they quantify your future pipeline, providing realistic targets for each giving level. Use these insights to inform your annual planning, resource allocation, and targeted stewardship. For example, if the projection shows declining top-tier donor counts, you can prioritize high-touch engagement for those at risk of downgrading or lapsing. If middle-tier donors show strong upgrade potential, you might invest in cultivation strategies designed to move them up. This analysis is especially valuable for development directors and advancement leadership, as well as anyone overseeing an annual fund or major gifts strategy. Integrate it into quarterly or annual review cycles-this analysis is recommended to be reviewed periodically as part of your Constituent Intelligence routines. To maximize value, assign responsibility for reviewing and acting on the findings to both frontline fundraisers and leadership. Use the projections to set realistic goals, prioritize portfolios, and monitor progress against benchmarks. Success measures should include improved retention rates, increased upgrade rates between tiers, and closing the gap between projected and actual revenue. Regular use of this analysis will help you spot risks and opportunities early, ensuring your fundraising strategies remain proactive and data-driven.

## QX140 Backtest of Projection Model Analysis

*This is a sophisticated "backtesting" analysis that validates the reliability of your forecasting and prediction methodology.*

Backtest of Projection Model How to use the Backtest of the Projection Model analysis This analysis allows you to retrospectively evaluate the accuracy of your donor projections by comparing forecasted donor counts and revenue by tier (Top, Middle, Bottom) against actual results for each of the past ten fiscal years. Using your gift transaction history and defined segment thresholds, it simulates what your forecasts would have been if you had only used data available prior to each target year, creating a robust backtest of your projection model. The analysis takes into account donor transitions between tiers, retention and lapse rates, and the influx of new or reactivated donors, delivering detailed metrics such as transition probabilities, average giving amounts, and error percentages for both donor counts and revenue. You can use this analysis to understand not just how many donors you retain, upgrade, or lose each year, but also how accurately your model predicts these movements. By breaking down performance by donor segment and tracking the share of new/reengaged donors, you gain actionable insight into the underlying drivers of your annual fundraising results. The side-by-side display of forecasted and actual outcomes allows you to pinpoint where your projection model is strong and where it may need refinement—critical for strategic planning and resource allocation. Key metrics include forecasted retained donors, projected and actual revenue, transition percentages (such as upgrade, downgrade, and lapse rates), and the rate and value of new/reengaged donors. These measures are essential for understanding donor lifecycle behaviors and the effectiveness of your stewardship and acquisition efforts. You should review these results as part of your Constituent Intelligence routines, especially at fiscal year-end and during strategic planning cycles. Fundraising directors, analytics leads, and those responsible for annual fund growth should use the insights to adjust forecasts, refine segmentation strategies, and tailor stewardship approaches. For example, persistent underestimation of new/reactivated donors may signal an opportunity to invest more in acquisition, while high lapse error rates could prompt targeted retention campaigns. To measure the success of using this analysis, track improvements in forecast accuracy over time, monitor increases in donor retention and upgrade rates, and assess whether campaign strategies based on these insights lead to higher actual revenue and engagement. By integrating these findings into your ongoing Constituent Intelligence practice, you can make data-driven decisions that strengthen donor relationships and drive sustainable fundraising growth.

## 1.1: Year-over-Year Donation Trends

### QX172 Segmentation Break Points

*This view shows what the segment breakpoints are. These are calculated outside the CI Hub using a variety of statistical analyses to find the best statistical fit. Each organization has a unique set of segment thresholds based on its recent donor history.*

The Segmentation Break Points analysis is designed to provide you with a clear understanding of the donor segments within your organization. By examining the "Thresholds" table, this analysis categorizes the donation amounts into different segments, namely Bottom Max, Middle Min, Middle Max, and Top Min. Each segment is determined by unique breakpoints that are calculated based on your organization's recent donor history using statistical analyses outside the CI Hub. This means that the segments are tailored specifically to your organization's donor base, which allows for a more accurate and relevant segmentation strategy. The key calculation in this analysis is the categorization of donation amounts into these segments. The segments are ordered in a way that reflects a hierarchy of donor engagement levels, from the lowest segment (Bottom Max) to the highest (Top Min). This ordering is crucial because it allows you to easily identify where donors fall within the spectrum of your organization's giving levels. Understanding these thresholds can help you tailor your engagement strategies to fit the unique characteristics of each donor segment. Strategically, this analysis is invaluable for making informed decisions about how to engage with different donor groups. By knowing the breakpoints, you can design targeted communication strategies, develop personalized donor journeys, and set appropriate fundraising goals for each segment. For example, you might decide to focus more resources on converting Middle Max donors into Top Min donors by designing specific campaigns aimed at encouraging higher giving levels. To make the most of this analysis, consider running it quarterly to ensure that you have the most up-to-date segmentation data. It should be reviewed by your fundraising team, particularly those involved in strategy and donor relations, to ensure that the insights are integrated into your broader fundraising efforts. Applying these insights might involve developing segment-specific appeals or recognizing donors who are on the cusp of moving into a higher segment. To evaluate the impact of using this analysis, you should track metrics such as the conversion rate of donors moving from one segment to another, the overall increase in donations from targeted segments, and the engagement levels of donors within each segment. By assessing these measures over time, you can determine the effectiveness of your segmentation strategy and adjust your tactics accordingly to maximize your fundraising potential.

## 3.3: Dashboards

### QX143 Foundational Analytics Dashboard

*This dashboard will display all of the KPI's required for a comprehensive RFM based Foundational Analysis of last year's giving data.*

The Foundational Analytics Dashboard provides a comprehensive overview of your nonprofit's giving data from the previous year, focusing on key performance indicators (KPIs) derived from RFM (Recency, Frequency, Monetary) analysis. Strategically, this analysis empowers you to make informed decisions about donor engagement and retention. By identifying high-value donors, you can develop personalized communication and stewardship plans that enhance their experience and encourage continued support. Conversely, recognizing donors who have not engaged recently allows you to initiate targeted re-engagement campaigns, potentially revitalizing their interest in your organization. To maximize the utility of this analysis, consider running it quarterly to stay updated on donor trends and shifts in giving behavior. Fundraising directors and development officers should review the findings to align their strategies with the insights provided. By analyzing this data regularly, you can proactively adapt your fundraising approaches based on donor engagement levels. As you implement insights from the Foundational Analytics Dashboard, you may want to measure success through various metrics, such as increases in donor retention rates, growth in average donation amounts, and improved engagement scores among previously inactive donors. Tracking these measures will provide you with clear indicators of the impact of your strategic decisions and help you refine your fundraising efforts over time.
